English Language and Literature  
 French Language and Literature  
 History  
 Life Sciences  
 Mathematics  
 Music  
 Physics  
 Visual and Performing Arts

#### Academic Minors

Minor in Arabic Language and Literature  
 Minor in Basic Education  
 Minor in History of Lebanon and the Middle East  
 Minor in Italian Language and Culture  
 Minor in Modern Languages and Translation  
 Minor in Philosophy

#### Graduate Programs

Master of Arts in Arabic Language and Literature  
 Master of Arts in Education  
*Emphasis:*  
 - Basic Education  
 - Administration of Education  
 - Technology of Education  
 - Support of People with Special Needs  
 - Supervision and Pedagogical Coordination  
 Master of Arts in English Language and Literature  
 Master of Arts in French Language and Literature  
 Master of Arts in History  
 Master of Arts in Information Studies  
 Master of Arts in Philosophy  
 Master of Arts in Translation  
 Diploma in Interpretation

#### Doctoral Programs

Ph.D. in Arabic Language and Literature  
 Ph.D. in Archeology and Art History  
 Ph.D. in Education Sciences  
 Ph.D. in English Language and Literature  
 Ph.D. in French Language and Literature  
 Ph.D. in History  
 Ph.D. in Language Sciences and Traductology  
 Ph.D. in Philosophy

#### **MATH, COMPUTER SCIENCE & IT.....167**

##### Undergraduate Programs

Bachelor of Science in Actuarial and Financial  
 Mathematics  
 Bachelor of Science in Computer Science  
 Bachelor of Science in Information Technology  
 Information Assurance & Cybersecurity Certificate

##### Academic Minors

Minor in Actuarial Studies  
 Minor in Web and Mobile Programming

##### Graduate Programs

Master of Science in Actuarial and Financial  
 Mathematics

Master of Science in Computer Science  
 Master of Science in Cybersecurity and Cyberdefence  
 Master of Science in Mathematics

#### **MUSIC & ARTS.....178**

##### Undergraduate Programs

Bachelor of Arts in Cinema and Television  
 Bachelor of Arts in Conservation, Restoration of  
 Cultural Property & Sacred Art  
 Bachelor of Arts in Higher and Specialized Music  
 Education

##### *Emphasis:*

- Music Composition
- Musical Instrument
- Singing (Arabic Singing / Occidental Classical Singing)
- Solfeggio/Dictation

Bachelor of Arts in Music

##### *Emphasis:*

- Musicology
- Music Education

Bachelor of Arts in Music – Music Industry

Bachelor of Arts in Performing Arts

##### Academic Minors

Minor in Musicology  
 Minor in Photography  
 Minor in Theater  
 Minor in Sacred Art: Iconography  
 Minor in Sacred Arts: Plastic Arts  
 Minor in Sound Recording

##### Graduate Programs

Master of Arts in Cinema and Television  
 Master of Arts in Conservation, Restoration of Cultural  
 Property & Sacred Art  
 Master of Arts in Music  
*Emphasis:*  
 - Musicology  
 - Music Education  
 Master of Arts in Performing Arts

##### Doctoral Programs

Ph.D. in Conservation, Restoration of Cultural Property  
 & Sacred Art  
 Ph.D. in Music and Ph.D. in Higher and Specialized  
 Music Education  
 Ph.D. in Visual Arts

#### **RELIGIOUS & ORIENTAL SCIENCES.....204**

##### Undergraduate Programs

Bachelor of Arts in Liturgy  
 Bachelor of Arts in Religious and Pastoral Education  
 Online Diploma in Liturgy

##### Graduate Programs

Master of Arts in Religious Sciences

#### **SOCIAL & BEHAVIORAL SCIENCES.....209**

##### Undergraduate Programs

Bachelor of Arts in Journalism and Communication  
 Bachelor of Arts in Psychology

*Emphasis:*

- Clinical Psychology
- Industrial Psychology

Bachelor of Arts in Social Sciences

#### **Academic Minors**

Minor in Psychology  
 Minor in Social Intervention  
 Minor in Sociology

#### **Graduate Programs**

Master of Arts in E-Journalism and E-Communication  
 Master of Arts in Intervention & Social Work  
 Master of Arts in Journalism and Communication  
 Master of Arts in Psychology

*Emphasis:*

- Clinical Psychology
- Industrial Psychology
- School Psychology

Master of Arts in Social Sciences

Diploma in Intervention and Systematic Therapies

#### **Doctoral Programs**

Ph.D. in Psychology  
 Ph.D. in Social Sciences

#### **SCIENCES.....224**

##### **Undergraduate Programs**

Bachelor of Science in Biochemistry  
 Bachelor of Science in Biology  
 Bachelor of Science in Chemistry  
 Bachelor of Science in Human Nutrition and Dietetics  
 Bachelor of Science in Nutrition & Dietetics -  
 Coordinated Program

##### **Academic Minors**

Minor in Applied Chemistry  
 Minor in Biochemistry  
 Minor in Chemistry  
 Minor in Natural Sciences  
 Minor in Sports Nutrition

##### **Graduate Programs**

Master of Science in Biochemistry  
 Master of Science in Biology  
 Master of Science in Chemistry  
 Master of Science in Environmental Technologies  
 Master of Science in Neuroscience and Biotechnology  
 Master of Science in Nutrition

##### **Doctoral Programs**

Ph.D. in Agricultural and Food Sciences  
 Ph.D. in Chemistry & Life and Earth Sciences

##### **Arts and Sciences Courses Descriptions**

#### **VII. School of Architecture and Design..... 332**

##### **Overview**

#### **Administration and Full-time Faculty**

##### **Undergraduate Programs**

Bachelor and Master of Architecture (Combined program)  
 Bachelor of Arts in Communication and Visual Arts  
 Bachelor of Arts in Design and Applied Arts  
 Bachelor of Arts in Digital Media

##### **Academic Minors**

Minor in Art and Architecture History  
 Minor in Interior Design

##### **Graduate Programs**

Bachelor and Master of Architecture (Combined program)  
 Master of Arts in Communication & Visual Arts  
 Master of Arts in Contemporary Art  
 Master of Arts in Digital Media  
 Master in Interior Architecture

##### **Architecture & Design Courses Descriptions**

#### **VIII. School of Engineering..... 421**

##### **Overview**

#### **Administration and Full-time Faculty**

##### **Undergraduate Programs**

Bachelor of Engineering in Biomedical Engineering  
 Bachelor of Engineering in Chemical Engineering  
 Bachelor of Engineering in Civil Engineering  
 Bachelor of Engineering in Computer Engineering  
 Bachelor of Engineering in Electrical and Electronics Engineering  
 Bachelor of Engineering in Mechanical Engineering  
 Bachelor of Engineering in Telecommunications Engineering  
 Bachelor of Science in Engineering Sciences - Food Engineering  
 Engineering Diploma in Agricultural Engineering

##### **Academic Minors**

Minor in Biomedical Engineering  
 Minor in Building Simulation  
 Minor in Computer Engineering  
 Minor in Electrical Installation  
 Minor in Food Packaging and Distribution  
 Minor in Material Sciences and Engineering  
 Minor in Petroleum and Natural Gas Engineering  
 Minor in Process Engineering  
 Minor in Sustainable Food Security

##### **Graduate Programs**

Master of Science in Biomedical Engineering  
 Master of Science in Chemical Engineering  
 Master of Science in Civil Engineering  
 Master of Science in Communication Engineering  
 Master of Science in Computer Engineering

Master of Science in Electrical and Electronics Engineering  
 Master of Science in Enology  
 Master of Science in Food Engineering  
 Master of Science in Mechanical Engineering  
 Master of Science in Petroleum Engineering

**Engineering Courses Descriptions**

**IX. School of Law and Political Sciences..... 460**

**Overview**

**Administration and Full-time Faculty**

**Undergraduate Programs**

Bachelor of Arts in International Relations  
 Bachelor of Arts in Political Sciences  
 Law Degree

**Academic Minors**

Minor in Human Rights  
 Minor in Middle Eastern Studies  
 Minor in Public administrations: Public Law and Administrative Organizations of Lebanon

**Graduate Programs**

Master of Laws in Business Law  
 Master of Arts in Criminology  
 Master of Arts in Diplomacy and International Security  
 Master of Laws in International Contracts  
 Master of Laws in Private Law  
 Master of Laws in Public Law  
 Master of Arts in Middle Eastern Studies  
 Master of Arts in Political Sciences  
 Master of Arts in Political Sciences - International Relations  
 Master of Laws in International & Comparative Law

**Doctoral Programs**

Ph.D. in Law

**Law & Political Sciences Courses Descriptions**

**X. School of Medicine and Medical Sciences..... 497**

**Overview**

**Administration and Full-time Faculty**

**Undergraduate Programs**

Bachelor of Science in Health Fundamental Sciences  
 Bachelor of Science in Nursing Sciences

**Doctoral Programs**

Doctorate of Medicine

**Postdoctoral Programs**

**Diploma of Specialized Studies**

Anatomical Pathology  
 Anesthesiology  
 Cardiology  
 Cardiovascular and Thoracic Surgery  
 Dermatology  
 Emergency Medicine

Endocrinology and Metabolic Disorders  
 ENT  
 Gastro-enterology  
 General Surgery  
 Hematology-Oncology  
 Infectious Diseases  
 Internal Medicine  
 Internal Medicine and Clinical Immunology  
 Laboratory Medicine  
 Nephrology

# The University

## About USEK

The Holy Spirit University of Kaslik (USEK) is a private Catholic institution of higher education founded and governed by the Lebanese Maronite Order (LMO) since 1938. USEK is located on the cost side of Mount Lebanon with an exceptional exposure to the Mediterranean Sea. Nowadays, USEK welcomes around 6500 students across its 7 Faculties/Schools and 3 Institutes.

USEK is committed to provide students with an excellent learning experience by a strong focus on teaching and learning, quality assurance, research, campus life and facilities. Continuous improvement and excellence are the key points of USEK current activities and strategic planning. USEK has incorporated e-learning to support student learning and provided its faculty with a professional certification in teaching and learning from eminent international institutions. USEK has also created a center of teaching excellence (LTEC) for the continuous development of faculty qualifications and sharing best practices in teaching and learning.

USEK is an active member in national and regional policy making activities, thus providing strong support to the development of the Lebanese Higher Education System through many councils, committees and national projects, including, but not limited to:

- Lebanese Higher Education Council of the Ministry of Education and Higher Education, the highest academic body in Lebanon, elected member since July 2018
- Committee of Equivalence at the Ministry of Education and Higher Education formed upon the enactment of the Lebanese Law of Higher Education by Ministerial Decree in 1962
- Project Applicant and Manager of three out of four national projects that contribute to inducing a change to HE policies in Lebanon in collaboration with the Ministry of Education and Higher Education. These projects are co-funded by the Erasmus+ Programme of the European Union with a total budget more than 2.1 million Euros:
  - o The Professional Standards Framework for Excellence in Teaching and Learning in Lebanese Universities (E-TALEB), from October 2015 until April 2019
  - o Student Empowerment, Engagement and Representation in Lebanese Universities (StEER-Leb), since October 2017
  - o The Lebanese Diploma Supplement (LEBPASS), since October 2018
- Council of the Universities Association of Lebanon (<http://uaolb.org/>)
- Quality Assurance Committee of the Universities Association of Lebanon
- Higher Education Policy Committee of the Universities Association of Lebanon
- Scientific Research Committee of the Universities Association of Lebanon
- Headquarters of the Association of Schools of Business in the Arab world as part of the Association of Arab Universities
- Vice Presidency of the Union of Mediterranean Universities that gather 112 universities from different European and Arab universities.

Moreover, in order to enhance students' employability, USEK has adopted a program framework based on learning outcomes defined in collaboration with local and international employers with a strong focus on general education. In this regard, USEK has also created minors in different disciplines to offer the students a chance to expand their knowledge and expertise. Furthermore, USEK has created new programs and redesigned existing ones to be consistent with the job market needs and with state of the art of the relative disciplines.

USEK did voluntarily seek international external evaluation and accreditation. After a long process of evaluation and enhancement, USEK was granted the European Institutional Accreditation by Evalag-Germany and the reaccreditation was obtained to be valid until 2022. Also, In April 2021, The New England Commission of Higher Education has determined that the Holy Spirit University of Kaslik is eligible to proceed with an application for candidacy for accreditation within two years. A determination of eligibility is not candidacy or accreditation, nor does it indicate a likelihood of eventual accreditation.

As for the programs' accreditation, 12 computing, engineering and sciences programs are accredited by ABET, and 8 social sciences and humanities programs received the international accreditation by the accreditation commission of Evalag, Evaluationsagentur baden-württemberg. Also, the Business School is an official candidate for the Association to Advance Collegiate Schools of Business (AACSB) accreditation. Additionally, the School of Architecture and Design has received the International Certification Designation from the National Architectural Accrediting Board (NAAB) from 2019 to 2025 for its Master in Architecture which is as well recognized by the French Ministry of Culture as being equivalent to the French Diploma in Architecture allowing its holder to practice as a salaried architect in France. As for the School of Medicine and Medical Sciences, in January 2019, it has been granted a full 6-year accreditation by the TEPDAD International Council for Accreditation.

The international academic reputation, resulting from quality assurance, is embodied in the continuous academic development and in the internationalization strategy of the university where more than 150 cooperation agreements/memberships are established with renowned universities and associations worldwide and in U.S., such as CHEA International Quality Group, Association of Governing Boards (AGB), Association of International Educators (NAFSA), American Council on Education (ACE) and others. In addition, the Holy Spirit University Foundation which is an American non-profit organization based in U.S., has dedicated its efforts to support and promote the University mission in various forms.

As for its positioning in Lebanon, the Arab and MENA region and the World, USEK is considered:

- One of the outperforming universities of the MENA region, *University Governance Screening Card by the World Bank in 2013*
- Among the Top 7 Universities in Lebanon, *QS Arab Region University Rankings 2021*
- Number 30 in the Arab region, *QS Arab Region University Rankings 2021* (up 31 ranks compared to 2017)
- Among the Top 580 Universities in the World, *QS World University Rankings 2022*
- Second best university in Lebanon according to SCImago Institutions Rankings (SIR)
- Number 1 Most Sustainable and Green University in Lebanon, *UI GreenMetric World University Rankings 2021* (for the fifth consecutive year)
- Number 5 Most Sustainable and Green University in the Arab World, *UI GreenMetric World University Rankings 2021*
- Number 117 Most Sustainable and Green University in the world, *UI GreenMetric World University Rankings 2021* (up 63 ranks compared to 2018)

The University received the GAIA Award 2018 for the protection of the Mediterranean environment and the IBEF "Energy Ambassador of The Year 2018" Prize.

USEK is strongly engaged in U.S. Higher Education Quality System and highly committed to its dissemination through organizing and hosting pioneering and various events such as, but not limited to:

- "The 2017 ABET Accreditation Seminar - First MENA Region Edition" in collaboration with ABET (October 2017).
- "Catholic Higher Education in Lebanon and the Middle East: Advancing Mission and Leading Innovation" in collaboration and with the presence of the President of the Association of Catholic Colleges and Universities (September 2018).
- "Accreditation for Reshaping Business Education in the MENA Region - BE Mena Beirut 2019" in collaboration with the Association to Advance Collegiate Schools of Business (AACSB) and with the presence of the Executive Vice President and Chief Officer, Europe, the Middle East, and Africa for AACSB International (February 2019).
- "AIAS Second International Conference - Layer 21" organized and hosted by USEK Chapter of the American Institute of Architecture Students - AIAS (March 2019).

The student's learning and campus experience lies at the heart of the institutional strategy of USEK. The University Students affairs and social services office along with the University Counseling Center provide personal support to student in their educational path to overcome social, financial or educational difficulties. The University Career Service Office aims to build confidence in career planning and mature decision-making. USEK has also a strong rewarding system for student's excellence with a set of scholarship based on outstanding academic records. In 2015, USEK gained Matrix accreditation for its "Student Support Services" to ensure its commitment to offer high quality services to its students for their welfare on campus, and ultimately for supporting them in their learning, career and life goals.

USEK offers to its students as well an outstanding environment for research, entrepreneurship and innovation, continuous learning, and professional guidance and support. In this context, the USEK main library and the laboratories have been renovated to provide better support to all University stakeholders in their research activities and projects. On this same note, the Asher Center for Innovation and Entrepreneurship and the USEK Continuing Learning Center were recently launched and actively working with all university stakeholders.

USEK sows the seeds of a better future across the promotion of a sustainable development culture among the community. This culture being concretized through a closer cooperation with NGOs and the public sector, and also through the organization of international conferences on corporate governance, ethics, and citizenship, sustainable constructions, human rights, quality education, entrepreneurship and innovation, etc.

## Background, Mission, Vision and Core Values

### Background

USEK was founded in 1938 as an independent private Catholic institution, by the Lebanese Maronite Order who serves Higher education in monasteries since the 18<sup>th</sup> century. The University was founded before the first Lebanese Law of Higher Education promulgated in 1961, and by that date, the Lebanese State recognized USEK as a private Higher Education Institution in Lebanon, according to the Law of Higher Education in Lebanon. Since 1997, the university has adopted the North American credit system, in order to facilitate students' credit transfer and recognition and to move toward an American Style institution.

### Mission

Since its founding, USEK seeks, in accordance with the Article 92 of the *Constitutions of the OLM (ed. 2012)* and the social teaching of the Catholic Church on universities, to contribute to the development of all its students through quality educational programs and research in various fields of study. By providing a high quality American-style education to its students, USEK intends to prepare future leaders for innovation, professional growth and life-long learning, in Lebanon, within the Middle East and throughout the world. USEK is committed to a faith-based educational development of its students rooted in the Catholic tradition whereby spiritual values and ethics as well as respect for cultural and religious pluralism are promoted.

### Vision

The Holy Spirit University of Kaslik (USEK) seeks to be the leading Higher Education institution in Lebanon and one of the leading Higher Education institutions in the MENA region by 2022, recognized by its educational excellence, international recognition, and commitment to serving the society.

## Core Values

### EXCELLENCE IN TEACHING AND LEARNING

USEK is committed to provide its students an excellent educational and academic experience. Therefore, we promote active learning and use of technology in order to support and enhance educational provision, build teamwork and peer observation in teaching and learning, support research and innovation in teaching, and commit ourselves to insuring continuous professional development to our faculty and staff.

### EXCELLENCE IN QUALITY SERVICE

We are committed to roll quality service that impacts our stakeholders, both within and outside the University Campus. We strive to offer the best quality service, acting at all times with integrity and professionalism and are devoted to serving the common good by better understanding and meeting the needs and expectations of our students, faculty, staff, and external constituents.

### CREATIVITY AND CONTINUOUS IMPROVEMENT

We assert commitment to continuously improve University stakeholders' well-being through creative ideas, innovation and positive change. We stimulate creativity and innovation by manifesting freedom of thought, autonomy, empowerment and decision making.

### INTEGRITY AND ACCOUNTABILITY

We commit to act with honesty and integrity, be open and fair for maintaining the highest relationship trust. We aim to communicate transparently to serve in the best interest of students, faculty, staff, and other constituents. We believe in continuous assessment of our practices and hold ourselves accountable of our own actions that influence the well-being of our students, faculty members and fellow employees.

### COOPERATION AND DIVERSITY

We believe in synergy of cooperation and teamwork and provide support to one another. We value diversity, talents, others' views, promoting justice, fairness, equitable treatment, and creating a positive and enjoyable workplace.

### STEWARDSHIP AND SERVICE TO SOCIETY

We are socially responsible for the welfare of human beings, through education, social assistance and community support. Thus, we devote ourselves to guide and support our students throughout their higher education. We are keen on cultivating ethics and moral conducts in line with our Catholic social teaching and commit to ensure the safety of our people in a healthy work environment.

## Triple Accreditations at USEK

Given that one of the main objectives of USEK is achieving distinction in globalizing the university by complying with international standards, the University has put great efforts in different evaluation and accreditation projects. These efforts resulted in the completion of the below accreditations:

### 1. Institutional Accreditation:

#### NECHE Eligibility

In April 2021, The New England Commission of Higher Education has determined that the Holy Spirit University of Kaslik is eligible to proceed with an application for candidacy for accreditation within two years.

A determination of eligibility is not candidacy or accreditation, nor does it indicate a likelihood of eventual accreditation.

Questions about eligibility and the accreditation process should be directed to the President of the Commission.

#### Institutional Evaluation Program

In September 2009, USEK has completed an Institutional Evaluation Program conducted by the European University Association (EUA) and became the first university in the Middle East that conducts such an evaluation programme.

The Institutional Evaluation Programme (IEP) is an independent membership service of the European University Association (EUA), the representative organization of universities and national rectors' conferences in 47 European countries. IEP is a full member of ENQA (the European Association for Quality Assurance in Higher Education) and is listed in EQAR (the European Quality Assurance Register for Higher Education). Created in 1994, IEP ensures that higher education institutions gain maximum benefit from a comprehensive evaluation conducted by a team of experienced higher education leaders. To date, IEP evaluation teams have carried out nearly to 400 evaluations and follow-up evaluations of diverse higher education institutions in 45 countries worldwide. This evaluation programme conducted lasted for an entire year. Following the auto-evaluation phase which extended over more than 6 months, USEK hosted, twice, a team of 5 experts from the EUA. The experts did not only evaluate the action plan and the applied practices inside the university, but they have also met the majority of officials, a group of students, as well as different stakeholders involved in the university community (Director of Higher Education in Lebanon, representatives of NGOs and associations, entrepreneurs, etc.).

#### European Institutional Reaccreditation

Conducting a European Institutional Accreditation was to assure that the university is in a continuous process of improvement and that strategic vision and practices meet the European standards.

The European Institutional Accreditation was initially granted to USEK in December 2012 for a five-year period and in June 2017, the Accreditation Commission of evalag officially reaccredited USEK, thus re-awarding the evalag international label for Institutional Accreditation for another five years until 2022.

The German institution, evalag EVALUATIONSAGENTUR BADEN-WÜRTTEMBERG, is an active member of ENQA (European Association for Quality Assurance in Higher Education), EQAR (European Quality Assurance Register for Higher Education), CEENQA (Central and Eastern European Network of Quality Assurance Agencies in Higher Education), DeGEval (Gesellschaft für Evaluation e.V., German Evaluation Society), and INQAAHE (International Network for Quality Assurance Agencies in Higher Education).

evalag is known as a center of competence for quality assurance and enhancement and a source of support for higher education institutions and other scientific institutions, with commitment for good quality in teaching and learning, research and other services.

## 2. PROGRAMS' ACCREDITATION:

### Applied and Natural Sciences

Two Science Programs are accredited by the Applied and Natural Science Accreditation Commission of ABET, <http://www.abet.org>, the global accreditor of college and university programs in applied science, computing, engineering, and engineering technology.

These programs are listed as follows:

#### Faculty of Arts and Sciences:

- Actuarial and Financial Mathematics (BS)

#### Higher Institute of Nursing Sciences affiliated to the School of Medicine and Medical Sciences:

- Nursing Sciences (BS)

### Computing Programs

In 2016, two Computing Programs were accredited by the Computing Accreditation Commission of ABET, <http://www.abet.org>, the global accreditor of college and university programs in applied science, computing, engineering, and engineering technology.

#### Faculty of Arts and Sciences:

- Computer Science (BS)
- Information Technology (BS)

### Engineering Programs

Also, eight Engineering Programs are accredited by the Engineering Accreditation Commission of ABET:

#### School of Engineering:

- Agricultural Engineering (Engineering Diploma)
- Biomedical Engineering (BE)
- Chemical Engineering (BE)
- Civil Engineering (BE)
- Computer Engineering (BE)
- Electrical and Electronics Engineering (BE)
- Mechanical Engineering (BE)
- Telecommunications Engineering (BE)

### Humanities and Social Sciences Programs

In June 2017, eight Social Sciences and Humanities programs received the International Accreditation by the Accreditation Commission of evalag, EVALUATIONSAGENTUR BADEN-WÜRTTEMBERG <http://www.evalag.de>, known as a center of competence for quality assurance and enhancement and a source of support for higher education institutions and other scientific institutions, with commitment for good quality in teaching and learning, research and other services.

#### Faculty of Arts and Sciences:

- Education – Basic Education (BA)
- History (BA)
- Journalism and Communication (BA)
- Language and Literature (BA)
- Modern Languages and Translation (BA)

- Psychology (BA)
- Philosophy (BA)
- Social Sciences (BA)

### International Certification Designation - Architecture Program

The term “International Certification” identifies a program as comparable in educational outcomes in all significant aspects to a program accredited by the NAAB in the United States and indicates that it provides an educational experience meeting acceptable standards, even though such program may differ in format or method of delivery. The designation is valid for six years

beginning 1 January of the year in which the final visit (Visit 3) took place. In order to maintain the designation, the program must be visited again in the sixth year of the designation.

Schools with programs identified as holding NAAB International Certification are not formally “accredited” as that term is used with reference to programs in the United States and may not refer to their programs as “accredited” by the NAAB. However, students who graduate from internationally certified programs are able to apply for individualized review of their credentials on an expedited basis for purposes of the Educational Evaluation Services for Architects program administered by the NAAB on behalf of the National Council of Architectural Registration Boards.

The Holy Spirit University of Kaslik, School of Architecture and Design has received the International Certification designation from the [National Architectural Accrediting Board](#) for the following professional degree program:

#### **MASTER OF ARCHITECTURE - (193 SEMESTER CREDIT HOURS) – 2019**

Further Information on NAAB International Certification could be found at: <https://www.naab.org/international/international-certification/>.

#### **USEK Master of Architecture Diploma Equivalent to the French Diploma in Architecture**

By decision of the French Minister of Culture on April 24, 2018, the Diploma of Master of Architecture awarded by USEK’s School of Architecture and Design is recognized as being equivalent to the French Diploma in Architecture starting the academic year 2015-2016. This recognition was renewed on April 14, 2021, for a period of five years as of the academic year 2020-2021.

The French Diploma in Architecture allows its holder to practice as a salaried architect in France and offers the opportunity to enroll in the training course for “the training of the graduate architect to provide services in person”. This training provides those who undergo it with the opportunity to be enrolled in the registry for exercising the profession as an independent architect.

#### **Accredited Program - Medical Education**

In 2019, the Undergraduate Medical Education Program Offered by the School of Medicine and Medical Sciences was granted full accreditation for six years, effective from January 2019 until December 2024, after being successfully evaluated by the Association for Evaluation and Accreditation of Medical Education Programs (TEPDAD).

This recent success follows the Basic Medical Education: World Federation for Medical Education (WFME) Global Standards for Quality Improvement awarded in 2015.

### Ongoing Accreditation - Business Programs

USEK Business School is currently engaged with the AACSB accreditation process under the University's mission to pursue excellence and continuous improvement throughout all its programs.

AACSB stands for the Association to Advance Collegiate Schools of Business - the global association of leaders in education and business, dedicated to supporting and advancing quality business education worldwide.

### 3. STUDENTS' SERVICES ACCREDITATION:

In 2015, USEK became the first university in Lebanon and the region to gain accreditation for its student support services, which aims to ensure its commitment to offer high quality services to its students for their welfare on campus, and ultimately for supporting them in their learning, career and life goals.

The student support services at USEK have successfully gained the matrix accreditation, confirming that all areas of the services provided by the following offices met [the matrix standard](#), recognizing that the University is committed to provide students with 360-degree services and support:

- Admissions Office
- Registrar Office
- Student Affairs Office
- Financial Aid Office
- International Affairs Office (international students' services)
- Careers Services Office
- USEK Counseling Center (UCC)
- Institutional Research and Assessment Office (previously Quality Assurance and Institutional Effectiveness Office)

Moreover, USEK offers well-established effective partnerships and networks that support and bring added value to the services offered, empowered by the commitment of the staff who provide an impartial and relevant service to students.

[The matrix standard](#) is a unique quality standard established in the UK as a means for organizations to assess and measure their advice and support services, which ultimately sustain individuals in their choice of career, learning, work and life goals.

The accreditation was initially obtained in July 2015 following a 3 day on-site assessment visit undertaken by [Assessment Services Ltd](#), during which the matrix assessor had individual and group meetings with the University administration, directors and staff of the concerned offices, students, and external partners such as schools and employers.

Two reaccreditation visits were successfully completed in July 2018 and July 2021, resulting in an accreditation renewal until July 2024. Annual Continuous Improvement Checks are conducted to confirm that the University is successfully maintaining the Matrix Accreditation.

## Board of Trustees

Dr. George Altirs, Chair of USEK Board of Trustees, President & CEO of Capelli New York  
 Mr. Fady Chamoun, Vice-Chair of USEK Board of Trustees, President and CEO of Seasoned Brand LLC, U.S.A  
 Bassam M. Deeb, PH.D., Secretary of USEK Board of Trustees, President of Trocaire College

Mr. Elias Nassif Abou-Fadel, Managing Partner, BD Consult  
 Sister Therese Antone, RSM, Chancellor of Salve Regina University  
 Dr. Anthony Asher, Chairman of Weston Inc.  
 Elias Ayoub, M.D., Otolaryngology, U.S.A.  
 William "Bill" Clements, PH.D., Vice-President and Dean of Norwich University  
 H.E. Dr. Claudia Fritsche, Former Ambassador  
 Mr. Ziad Hayek, Secretary General of the Lebanese Higher Council for Privatization  
 Father Doctor Talal Hachem, President of the Holy Spirit University of Kaslik  
 Mr. Shadi Antoine Karam, Senior Advisor to the Prime Minister of Lebanon  
 Mrs. Diane Elizabeth Kelly, Former U.S. Consul General  
 Mr. Marwan Kheireddine, Chairman & General Manager, Al Mawarid Bank  
 George E. Kikano, MD, Dean of the College of Medicine, CMU  
 Father Professor Hady Mahfouz, OLM Second Assistant General  
 Thomas Sabbagh, Ph.D., Professor of Management & Leadership and Academic Assessment Expert  
 Joseph Saliba, Ph.D., Professor of Engineering and Former Provost, University of Dayton  
 Mrs. Moni Sfeir, Consultant and Legal Advisor  
 Dr. Salim Sfeir, Chairman and CEO Bank of Beirut

## Administration

### President

Father Doctor Talal El Hachem, President

### Vice-Presidents

Father Doctor Elias Hanna, Senior Vice-President

Father Doctor Georges Azzi, Vice President for Finance

Father Doctor Toni Eid, Vice President for Community Life

### Provost

Mr. Pascal Damien, Associate Provost for Academic Affairs

Doctor Faten El Hage, Associate Provost for Institutional Effectiveness

Doctor Ghada Karam, Associate Provost for Strategy & Policy

Professor Joseph Zalaket, Associate Provost for Institutional Data Analytics

### Deputy Presidents

Professor Nehme Azoury, Deputy President for Corporate and Employment Affairs

Doctor Rima Mattar, Deputy President for International Affairs and Global Initiatives

Doctor Céline Baaklini, Deputy President for Students

Mr. Khalil Abboud, Deputy President for Organizational Development

### Academic and Research Council

The University Academic and Research Council is composed of the President, Vice-Presidents, Provost, Deputy-Presidents, Deans of Faculty/Schools, Dean of Doctoral College, Librarian and two full-time faculty members.

#### Members:

- Father Doctor Talal Hachem, President of the Holy Spirit University of Kaslik
- Father Doctor Elias Hanna, Senior Vice-President
- Father Doctor Georges Azzi, Vice President for Finance
- Father Doctor Toni Eid, Vice President for Community Life
- Doctor Barbar Zeghondy, Provost
- Professor Nehme Azoury, Deputy President for Corporate and Employment Affairs
- Doctor Rima Mattar, Deputy President for International Affairs and Global Initiatives
- Doctor Céline Baaklini, Deputy President for Students
- Mr. Khalil Abboud, Deputy President for Organizational Development
- Father Doctor Elias Jamhoury, Dean of the Pontifical School of Theology
- Doctor Danielle Khalife, Dean of the Business School
- Doctor Paul Zgheib, Dean of the School of Architecture and Design
- Doctor Hanna Mattar, Dean of the School of Medicine and Medical Sciences
- Doctor Joseph Al Assad, Dean of the School of Engineering
- Mr. Pascal Damien, Dean of the Faculty of Arts and Sciences
- Professor Joseph Saab, Dean of the Doctoral College
- Father Doctor Joseph Moukarzel, The University Librarian
- Doctor Ghada Karam, Faculty Member
- Doctor Samar Azzi, Faculty Member

## Academic Units Founding Dates

## Campus and Regional University Centers

### Main Campus

The Holy Spirit University of Kaslik is located in the city of Jounieh which borders the splendid Bay of Jounieh on the coast of the Mediterranean Sea.

Jounieh is a cosmopolitan city; it vibrates with its history, archeology, and natural beauty and with its recreational and sport activities, amusement centers and numerous restaurants.

Jounieh is located 15 km north of the Lebanese capital, Beirut, 10 km south of Byblos and 50 km south of Tripoli.

### Main Campus Plan

|                              |                                                                                            |

## Regional University Centers

Concerned in contributing to a democratization of the higher teaching and struggling against the exclusion of youth living in remote areas, the Holy Spirit University of Kaslik (USEK) has carried out the creation of three Regional University Centers (RUC):

- Zahle RUC located in the Bekaa Valley
- Chekka RUC located in North Lebanon
- Rmeich RUC located in South Lebanon

**RUC Zahle**

**RUC Chekka**

**RUC Rmeich**

## Student Services

### Admissions Office

#### Mission

The Mission of the Admissions Office is to welcome candidates, USEK students and their parents or teachers in order to inform and guide them in their chosen major, in their potential reorientation and in their occupational choice. The office organizes orientation days mainly addressed to students in Grades 9 to 12 who wish to know about the different majors and specializations available at USEK and about the education regulations in force. These days are held in local and foreign high schools, as well as on USEK's four campuses. Visitors are provided with helpful brochures during these days, which help guide new USEK students in the administrative process.

#### Vision

The Vision of the Admissions Office is to reach and attract all Lebanese students in Lebanon, as well as foreign students abroad, and to seek the continuous development of our orientation visual and listening methods, and to coordinate with international Admissions offices, especially in the United States and Europe.

#### Services to Future Students

- Open doors to greet students and introduce them to the campus, faculties and institutes;
- Guided tours of the Notre Dame des Secours Hospital, which is located in Jbeil, for candidates interested in the medicine and medical sciences curricula;
- Psychology tests to help students choose their specializations according to their preferences;
- Different forms of orientation :
  - General orientation for 9th to 12th grade students through our participation in regional forums, our presence in forums held by educational institutions and our visits to national and international educational institutions;
  - Individual orientation by providing accurate information, consultation, and examples to candidates.
- Spreading awareness regarding the accessible careers determined by the chosen programs;
- “Shadowing”, giving students the opportunity to attend several classes of their choice;
- Updating future candidates and current students with the latest information related to the entrance exams and available programs (calendars, brochures, website and mobile application).
- Admission of continuing education students, free listeners and cross-registration students;

For more information, contact [admissions@usek.edu.lb](mailto:admissions@usek.edu.lb)

### Registrar Office

#### Mission

The Office of the Registrar at USEK is privileged to serve students from the moment they apply to USEK to the time of their graduation.

As part of its activities, the Registrar's Office is responsible for issuing student IDs, as well as official academic transcripts and certificates. It manages requests such as readmission, interruption of studies and change of academic program or of campus, in accordance with the regulations in force. Moreover, it supervises the registration process and updates the catalogue, in addition to organizing and managing course and final exam schedules.

The Office of the Registrar takes joy in being the interpreter of USEK's academic policies and the steward of all student records from application to degree conferred.

### Services to Students

- Deliver ID cards to students;
- Deliver certificates, official transcripts, course descriptions and diplomas;
- Update and modify the students' personal information;
- Handling of all forms such as: readmission, change of program, change of campus, change in personal information, withdraw, interruption of studies, term withdraw, double major and exemption.

For more information, contact [registrar@usek.edu.lb](mailto:registrar@usek.edu.lb) "

### Student Affairs Office

#### Mission

The mission of the Student Affairs Office is to further the students' success, help them with any problems they face and involve them in all campus activities based on USEK's mission and rules.

#### Vision

The Student Affairs Office at USEK strives to provide help and advice to all students on various levels during their academic journey.

#### Services

- Organize a wide selection of many social and cultural activities;
- Organize Welcome Days for new students;
- Act as a link between students and all departments and faculties;
- Assist students in submitting absence petitions for midterm and final examinations;
- Offer on-campus student jobs;
- Manage the university residence for female students;
- Provide first-aid services through the Infirmary;
- Manage lost and found objects;
- Disseminate information among students;
- Make referrals to appropriate services and assist students in resolving problems involving university policies, systems or procedures.

For more information, contact [sao@usek.edu.lb](mailto:sao@usek.edu.lb)

### Financial Aid Office

#### Mission

In keeping with the mission of the Lebanese Maronite Order, USEK is committed to helping every student facing personal, relational, family, financial or medical difficulties without any discrimination related to religion, culture or nationality.

#### Vision

The vision of the Financial Aid Office is the well-being of every student registered at USEK. This vision includes giving them a better academic results and improved adaptation capabilities in their professional field.

#### Services to Students

- Submission/renewal of the Financial Aid Application
- Applying for:
  - Sibling's allowance;
  - Brother, sister, nephew or niece of an OLM member discount;
  - OLM/non-OLM school employee/teacher discount.
- Spreading/postponing the student's tuition payments according to his/her financial capacities;
- Facilitating the enrollment of students with outstanding balance;

- Follow-up on tuition fees clarifications (payment issue, discount not applied, etc.).
- Personal and family social intervention;
- Orientation towards internal and external specialized experts and/or institutions.

For more information, contact [fao@usek.edu.lb](mailto:fao@usek.edu.lb)"

### International Affairs Office

The International Affairs Office manages all the partnership and cooperation agreements established between USEK and other local and foreign Higher Education institutions.

The Office is responsible, furthermore, for establishing relationships with potential partners in order to implement new collaborations within a perspective of developing educational offers, cultural exchanges, knowledge, know-how and this for the benefit of lecturers-researchers as well as students.

The establishment of cooperation agreements aims at launching multiple actions placed under the supervision and management of the Office, mainly: joint scientific research projects; joint organization of seminars, colloquiums, conferences, etc.; joint publications; exchange of lecturers-researchers and students; scholarships for USEK students applying for one of the partner institutions in order to pursue their university studies; as well as co-direction and co-supervision of dissertations and theses.

The International Affairs Office welcomes international students to USEK, within the framework of partnerships and cooperation agreements, and encourages students to pursue their studies abroad. Regularly visit USEK website to learn about ongoing calls for applications.

For more information and contacts, check [usek.edu.lb](http://usek.edu.lb).

### Career Services Office

#### Mission

The mission of the Career Services Office (CSO) at the Holy Spirit University of Kaslik (USEK) is to make our career services an essential component of your personal development and build on your employability while at University and after graduation.

#### Vision

The vision of the Career Services Office (CSO) at the Holy Spirit University of Kaslik (USEK) is to make a meaningful contribution to your experience, inspiring and empowering you to be the best you can be, to fully develop your potential and to kick off your career confidently.

#### Services to Students

##### A- The 4 Year Career Plan

The 4-year career plan is tailored by the Career Services Office (CSO) team to ensure your readiness before hitting the job market:

##### 1st Year DISCOVER

- Learn about the Career Services Office (CSO).
- Explore your career options and possibilities.
- Book your first advisory appointment.

##### 2nd Year PREPARE

- Start building your CV/register at the portal.
- Meet with the internship assistant to land an internship.
- Develop your language skills.

- Strive for a strong GPA and academic achievements.

#### 3rd Year CONNECT

- Attend the CSO workshops.
- Start networking with employers.
- Update and fine-tune your CV.

#### 4th Year ACHIEVE

- Meet us for essential interview tips.
- Get your CV reviewed by the CSO team.
- Attend the mandatory pre-graduation session.

### B- The Undergraduate Guide To Careers

The CSO Team has put together an e-handbook that includes everything you need to know to prepare you for the job market. *For more information, contact [careers@usek.edu.lb](mailto:careers@usek.edu.lb)*

### Sports Department

As a privileged space of conviviality and solidarity, the Sports department puts forward, among other things, the social and collective nature of any physical activity. The group sports proposed in this Office foster, in particular, the development of a team spirit. The belonging to a group and the convivial atmosphere that prevails within that unit, allows the creation of lasting friendship and solidarity bonds.

The Sports Center at the campus Kaslik has a tennis and mini football field, as well as a dance hall, a chess and table tennis rooms. Moreover, a swimming pool and a basket and volley-ball field are at the disposal of USEK's students, in the Central Club of Jounieh. The project of building a sports complex in the Main Campus of USEK is currently under study.

Within the general requirements program, a credit is dedicated to one of the ten activities proposed by the Sports Office; students will have the choice between: basket-ball, football, volley-ball, tennis, table tennis, dance, chess, swimming, badminton and judo. The assessment of this course takes into consideration the student's participation within the chosen activity, the achieved progress, as well as his knowledge and understanding of the game's rules and strategies.

Mentored by first class trainers, students can, if they wish, join a University team in order to represent USEK in local and international tournaments.

Several university teams, coached by specialized trainers, were formed to represent USEK in national and international university competitions. These teams operate in the following fields: basket-ball, volley-ball, football, futsal, table tennis, ski, tennis, chess, fencing, combat sports and athletics. USEK's Sports Office is also involved in international sports events and training sessions, which are held to maximize the players performances.

### USEK New Sport Complex

To complete the picture, the new Sport complex will be built according to the highest sustainable environmental standards, including being powered completely by renewable energy. This will house the University's student sports programs - mini-football, basketball and tennis - under one roof, with facilities including training grounds, sports medicine, and offices for coaches and staff. The complex will also function as a cultural space for USEK community, housing activities such as concerts and giving students a vibrant meeting point.

**Outdoor view of the upcoming Sport Complex**

**Indoor view of the upcoming Sport Complex**

For more information and contacts, check [usek.edu.lb](http://usek.edu.lb).

### University Chaplain Office

The University Chaplain Office of USEK was founded by the Assembly of the Catholic Patriarchs and Bishops in Lebanon in 1979, and was officially recognized by the Lebanese State in 1988. Registered within the organic statute of the University, the Chaplain's Office is open to all current students.

The objective of any University Chaplain Office within a Catholic Higher Education institution in Lebanon is to propose to the students a space for leading a Christian life and spiritual reflection. The students, who join, have the chance to live a fulfilling human experience of exchanges and encounters.

The main objectives of the University Chaplain Office answer the call of the Pope John Paul II: "In school and university life, it is proper to pay attention to the presence and quality of spiritual activities by means of well-organized chaplaincies, for that the young find moments of reflection and prayer helping them to unify their life of Christian men or women, taking into account the knowledge they acquire from their education program." (A new hope for Lebanon, no110)

In fact, USEK University Chaplain Office is:

- A Christian place for prayer (through community prayers, spiritual retreats, pilgrimages, etc.), of faith, of information and of education for an understanding of the faith;
- A Christian space for meeting, exchange, and contact with others of diverse background;
- A dynamic space of spiritual, cultural, sporting and leisure;
- A space for listening and spiritual fellowship (chaplaincy) such as psychological support.

USEK Chaplain Office regularly organizes:

- Spiritual meetings, religious celebrations and a yearly pilgrimage on the 1st of May to Marian sites, in order to celebrate the worship of the Virgin Mary;
- Cultural events and lectures, on current themes or of general culture, paving the way for a freely practiced reflection;
- Moments of meditation and sharing;
- Sporting and leisure activities (excursions, lectures, evenings, games...) in order to develop a team spirit as well as membership of a group.

For more information, contact [universitychaplainoffice@usek.edu.lb](mailto:universitychaplainoffice@usek.edu.lb)"

### USEK Counseling Center (UCC)

The transition to university is a privileged moment in a student's personal evolution, as it often coincides with changes in lifestyle, relationships, habits, etc. Therefore, this period entails phases of hesitation, difficulties

and sometimes even discomfort or acute anxiety. Students may suffer as a result and may find it difficult to share or put their feelings into words, often leading to greater distress.

The intervention of a psychologist is crucial at this point in order to empathize with young people, identify their psychological problems and subsequently offer appropriate help involving listening, counseling, awareness raising and off-campus orientation when needed.

There is no denying the importance of creating a safe haven for students that provides a listening ear and counsel to those who seek advice or guidance in a space where trust and discretion can help them find what they need.

The USEK Counseling Center (UCC) provides the following services to all students of the Holy Spirit University of Kaslik (USEK), whether on campus or in Regional University Centers:

- Crisis intervention and orientation
- Confidential short-term counseling
- Groups and workshops
- Psychoeducational programs (awareness raising and prevention)

University students might find it particularly difficult to go through this period of adjustment without support. The psychologist's mission is to address their developmental, relational, and emotional concerns.

*For more information, contact [ucc@usek.edu.lb](mailto:ucc@usek.edu.lb)*

## Library

The USEK Library supports and nurtures the mission and vision of the University, namely, the education of the youth and the building of a humanist culture.

Being in the heart of the University, USEK Library attempts to preserve this mission by offering library resources and high standards services. The USEK Library aims to enrich the student learning experience; it encourages exploration and research at all levels and provides access to an array of scholarly resources. The Library seeks to empower students to foster intellectual growth in an information age that produces leaders of the next generation in Lebanon and the Middle East.

In addition to its academic role since 2004, the USEK Library has launched an immense project of preserving, digitizing, and conserving the Lebanese written heritage in all its aspects (ethics, historic and religious) and formats (old newspapers, manuscripts, rare books, archives, photographs, and maps etc.)

For this impact, three centers were established within the Library: The Digital Development Center, the Conservation and Restoration Center, and the Archives.

The branches Libraries are closely affiliated to the Main Library as well: the libraries in the Regional University Centers (Chekka, Zahle and Rmeich) and the health Library in Jbeil Campus.

### National and international authorities:

On the national level, the library is a member of the LLA (Lebanese Library Association), and two national consortia: Lebanese Academic Library Consortium (LALC) and Lebanese ILL/DD Services (LIDS).

On the international level, the library is a member of several world organizations pertaining to library science and paleography:

1. e-corpus
2. The World Digital Library
3. Hill Museum & Manuscript Library
4. I-Revues
5. e-ktobe
6. The International Federation of Library Associations and Institutions (IFLA)
7. MELCom International, the European Association of Middle East Librarians
8. Medical Library Association (MLA)
9. North American Serials Interest Group (NASIG)

### Premises and Map of the Library:

Located in the main pavilion, south of the campus, the Library occupies a surface area of 3230 m<sup>2</sup> divided into two basement levels, a ground floor, and one storey.

- a- Ground Floor (Surface area 500 m<sup>2</sup>)
- b- Basement Level 1 (N-1) (Surface area 1100 m<sup>2</sup>)
- c- Basement Level 2 (N-2) (Surface area 1170 m<sup>2</sup>)

### Services

- **Borrow & Renew:** To allow USEK users to borrow materials from the Library and intercampus loans
- **Borrow from Other Libraries:** To allow USEK users to obtain books, e-book chapters, journal articles, conference papers not available at USEK Library
- **Place materials on Reserve (faculty members):** To reserve books and other print and non-print items which are required material for coursework. These items are placed behind the Circulation Desk within the Library and are issued for shorten loan periods

- **Suggest a Purchase:** To allow students and faculty members to provide suggestions for the purchase of books and other materials that would improve our collection
- **Reserve a Study Room:** To allow USEK users to make use of rooms for group work, faculty consultations...
- **Request Research Support:** To provide USEK users with the support and assistance needed to meet their information needs:
  1. Research appointments: Make an appointment with a librarian for in-depth help with your research paper or assignment;
  2. Research Workshops: Join a workshop to learn about using library resources, research databases, scholarly research process, citation styles and other topics.
  3. Research guides: Use for help finding discipline specific resources;
  4. Cite your sources: Learn how to cite your references properly;
  5. Avoid plagiarism: Tips and guidance on how to avoid plagiarisms in your research papers.
- **Request Instructional Support (faculty members):** To collaborate with librarians to ensure that students develop the information literacy skills they need to become efficient, effective, and fluent users and producers of information
- **Copy/Print/Scan:** To provide USEK users with copy facilities by recharging their accounts
- **Reserve a Library Tour:** To become better acquainted with the library premises, services and resources
- **Off-Campus Access:** To be able to access the Library electronic databases from anywhere in the world.

## IT and Communication Resources

### Banner Self-Service

Access to the Banner self-service allows the student to register online and to consult:

- ✓ Student personal academic transcripts;
- ✓ Student studies fees account;
- ✓ Student registration report;
- ✓ The University course catalogue;
- ✓ The University course schedules.

The banner self-service is accessible through the University website, MyUSEK and the mobile application.

### Course Evaluation by Students

Students are required to fill, on the BLUE evaluation system adopted by USEK, the evaluation of each course they have completed during a semester. They cannot access their final grade without filling this evaluation.

This evaluation revolves around the following criteria, using a scale from 1 to 4:

- General evaluation of the course
- Teaching organization by the teacher
- Educational abilities of the teacher
- Evaluation of the learning method adopted by the teacher
- General opinion of the course and the teaching method

**N.B.:** *This evaluation is strictly anonymous and confidential.*

Students are also required to fill the BLUE evaluation “On-Campus Well-Being” at the end of each semester. This evaluation revolves around the administrative services provided by the University: student life, student services, library, restaurant, communication and telecommunication, etc.

Finally, all final year students having fulfilled the requirements to obtain their diploma are required to fill the “Graduation Survey” evaluation when they launch their diploma/degree request at the Registrar Office.

### E-learning

Aiming to develop blended online teaching wherein the e-learning technology supports Faculty members in their educational activities, USEK started using the Moodle e-learning platform in September 2012 which facilitates learning through an improved course management discussion and exchange between faculty members and students and between students themselves.

The use of E-learning has contributed to the development of the University’s teaching and learning strategy mainly:

- The teacher-student interaction and student-student (Active learning and group-based learning)
- Improved assessment of student work, Effective feedback to the student
- Improved course management
- Traceability of student progress
- Traceability of educational development and course
- Capacity building for teachers
- Development of computer skills of teachers

It is worth mentioning that, in the academic year 2015-2016, more than 60 classes have been offered exclusively online to more than 1,000 students.

### E-Portfolio

USEK adopted the platform Mahara/ E-Portfolio since Fall 2014-2015 to support faculty, students and staff in the process of creating dynamic and engaging digital Portfolios where they will record and highlight their professional, personal and educational development and achievements.

Through E-Portfolio you can post and share your personal information, your Résumé - including your Goals, Skills, Employment and Education History – and your academic and professional projects.

E-Portfolio is capable of storing visual and auditory content including text, images, video and sound.

Why to use E-Portfolio?

- Learning and personal development: It's a space for reflection, review the current achievements and personal development planning
- Showcasing/Promotion: Presenting evidence of achievements, skills and qualities
- Assessment/Student:
  - Collection of evidence to be judged against a standard by an external assessor
  - Could use templates; tutor might access contents

### Mobile App

In May 2013, USEK launched their mobile app. With USEK mobile app, students can check for available courses at USEK, access their account balance, view their grades and even get information about their course schedule. They will be notified about the main events, announcements and receive messages from their instructor. They can also find directions to locations and any administrative staff they need for help. Students can also privately chat with each other and publish their personal ad. USEK mobile app will also allow students to have access to USEK sports' events, scores and news, as well as to latest vacancies.

The application is available on android and app store.

### MyUSEK

MyUSEK intranet is one of the privileged and official means of communication and collaboration within the University. It offers intuitive navigation, easy access to information, tools related specifically to the role at USEK and many other features:

- Customized homepage: a page that is customized to your role(s) at USEK whether you are a student, faculty, or staff member offering a quick view to:
  - My emails, My tasks, My calendar, My pending workflows (for all users)
  - My Pending Evaluations, My Holds, My Courses (additional features for students)
- Availability of information in English and French
- Exclusive accessibility from outside USEK, reserved for USEK Community <http://myusek.usek.edu.lb/>.

It presents the USEK flowchart, different faculties/institutes, offices/services, employees/faculty members, procedures and workflows etc. Thus, it spreads internal information and offers downloadable and accessible applications, documents, and links to students, including Banner and Webmail.

## Institutional Research & Assessment Office

### Mission

The Institutional Research & Assessment Office supports the University to achieve its mission through various initiatives such as planning, assessing and improving administrative and academic performance in alignment with international accreditation standards, where applicable. The office collects and analyzes data that are disseminated for decision making and reporting purposes.

### Vision

The vision of the office is to become a national and regional model in Quality Assurance and Institutional Effectiveness through assessment and accreditation.

### Accreditation

The Institutional Research & Assessment Office supports International Institutional Accreditation on both European and American levels and promotes and provides support for program accreditation by being an assessment resource, for the academic units, on matters pertaining to assessment and program improvement.

### Assessment and Institutional Effectiveness

Keeping improved student learning and institutional effectiveness in the priorities of the Holy Spirit University of Kaslik through developing efficient, sustainable, and integrated assessment processes, USEK has adopted an assessment strategy that includes:

- Strategic planning and assessment;
- Academic programs assessment and evaluation;
- Surveys (below is the USEK Surveys Calendar).

| Survey                                                   | Targeted participants                   | Frequency                    |
|----------------------------------------------------------|-----------------------------------------|------------------------------|
| <a href="#">Course Feedback by Students</a>              | All enrolled students                   | Week 13, every semester      |
| <a href="#">Course Self-Assessment by Faculty</a>        | Faculty members                         | Week 15, every semester      |
| <a href="#">On-campus Well-Being</a>                     | All enrolled students                   | Week 13, every semester      |
| <a href="#">Full-time Faculty Self-reflection report</a> | Full-time Faculty members               | May, every year              |
| <a href="#">Employee Self-reflection report</a>          | Employees                               | May, every year              |
| <a href="#">Program Experience Survey</a>                | All graduating students                 | End of graduating semester   |
| <a href="#">USEK Alumni</a>                              | Alumni evaluating Services and Programs | Continuously                 |
| <a href="#">First Destination Survey</a>                 | Graduated students                      | After one year of graduation |

For more information, contact [quality@usek.edu.lb](mailto:quality@usek.edu.lb)

## Alumni Relations Office

The USEK Alumni Relations Office is continually seeking to improve its position, in order to enhance interaction between current students, graduates, and the University itself.

The office aims to establish a large social network of post-graduates and previous graduates to keep Alumni involved in the University and its progress. The network also enables USEK to work closely with the community and benefit from its assets and to involve students and Alumni in all upcoming University events. Not only can the office allow Alumni to encourage current students and guide them in the right direction towards their professional career paths, it can also keep the entire USEK community aware of the University's developments and needs and make use of their knowledge and experience.

*For more information, contact [alumni@usek.edu.lb](mailto:alumni@usek.edu.lb)*

| Medicine (only one payment at the beginning of the term) | 600                      |
| Pontifical School of Theology                            | Cost per 1 credit in USD |
| Theology                                                 | 485                      |
| Doctoral College                                         | Cost per 1 credit in USD |
| Level III                                                | 485                      |

## Academic Calendar 2021-2022

*Announcements related to academic, cultural and sports events and activities will be regularly posted online on the USEK website: usek.edu.lb*

### October 2021

- Monday 4: Deadline to settle the 2nd payment of tuition fees for the Fall Semester 2021-2022 + Deadline to submit the online discount workflow
- Tuesday 5: Application of the financial penalty
- Saturday 9: English Proficiency Test + Math entrance exam for Undergraduate Studies including "Food Science Engineering & Agricultural Engineering"
- Wednesday 13: Draw to select Student Representative
- Friday 15: Deadline to submit the Siblings' Allowance request for academic year 2021-2022 (Students of the same family)
- Saturday 16: English/French/Arabic Proficiency Test + Math entrance exam for Undergraduate Programs (CI) including "Food Science Engineering and Agricultural Engineering"
- **Monday 18: Prophet Mohammad's Birthday\***
- Tuesday 19- Friday 29: Midterm exams (without class suspension) for the Fall Semester 2021-2022
- Friday 29: Deadline to submit NSSF papers
- Saturday 30: Deadline to submit the Financial Aid Application for academic year 2021-2022 (First year students)

### November 2021

- **Monday 1: All Saints Day**
- Friday 5: Deadline to settle the 3rd payment of tuition fees for the Fall Semester 2021-2022
- Saturday 6: Application of the financial penalty
- Monday 15- Friday 19: Advising for the Spring Semester 2021-2022
- Thursday 18 - Thursday 25: Online Early-Registration for the Spring Semester 2021-2022
- **Sunday 22: Independence Day**
- Tuesday 23: Deadline for withdrawal (W)
- Friday 26: Deadline to submit a request for a Double degree, Double major, Academic Minor and Change of campus for the Spring term 2021-2022
- Saturday 27: English/French/Arabic Proficiency Test + Math entrance exam for undergraduate programs (C1) including "Food Science Engineering & Agricultural Engineering"

### December 2021

- Friday 3: End of classes of the Fall Semester 2021-2022
- Monday 6 – Wednesday 15: Final Exams for the Fall term 2021-2022
- Monday 6: Deadline to settle the 4th payment of tuition fees for the Fall Semester 2021-2022
- Tuesday 7 6: Application of the financial penalty
- Wednesday 15: Tests and Oral Interviews for Graduate Programs (C2)
- Friday 17: Deadline to submit the Final grades of the Fall Semester 2021-2022
- Saturday 18: English/French/Arabic Proficiency Test + Math entrance exam for undergraduate programs (C1) including "Food Science Engineering & Agricultural Engineering"
- Monday 20: Deadline to submit a request to review a final grade of the Fall semester 2021-2022
- Tuesday 21 – Wednesday 22: Deadline to sit for a makeup exam for the Fall semester 2021-2022
- **Thursday 23 - Sunday 2 January: Christmas and New Year Holiday**

### January 2022

- Monday 3: Deadline to submit a request to change the academic program for the Spring Semester 2021-2022
- Tuesday 4: Deadline to complete the grades (I) of the Fall semester 2021-2022

- Wednesday 5: Deadline for applying for a transfer for the Spring semester 2021-2022 + Deadline to submit a request for readmission for the Spring semester 2021-2022
- **Thursday 6: Epiphany and Armenian Christmas**
- Saturday 8: English/French/Arabic Proficiency Test + Math entrance exam for undergraduate programs (C1) including "Food Science Engineering & Agricultural Engineering"
- Wednesday 12-Friday 14: Confirmation of the Early-Registration and Registration for the Spring Semester 2021-2022 for Undergraduate, Graduate and Postgraduates Studies programs (Settlement of the 1st payment of tuition fees for the Spring Semester: 2 working days prior to online registration)
- Friday 14: Registration of readmitted students for the Spring semester 2021-2022
- **Monday 17: Saint Anthony the Great**
- Tuesday 18- Wednesday 19: Orientation sessions and registration for new and transferred students for the Spring Semester 2021-2022
- Tuesday 18: Start of the period for the submission of a request of Siblings allowance
- Monday 24: Start of classes for the Spring Semester 2021-2022
- Monday 24-28: Add/Drop - Late registration for the Spring Semester 2021-2022
- Monday 24: Application of the \$100 late registration penalty
- Monday 24: Application of the non-cancelation of early registration penalty

#### February 2022

- Tuesday 1: Period of Admission on File for undergraduate studies (except Medicine) for the Academic Year 2022-2023 (deadline: End of April)
- Tuesday 1: Start of the Financial Aid application submission period for academic year 2022-2023 for current students
- **Wednesday 9: Saint Maron**
- **Makeup of Wednesday of week 3: to be scheduled by the Faculty**
- Friday 11: Deadline to settle the 2nd payment of tuition fees
- Saturday 12: Application of the financial penalty
- **Monday 14: Commemoration of the assassination of H.E.Mr. Rafic Hariri**
- **Makeup of Wednesday of week 4: to be scheduled by the Faculty**
- **Friday 25: Deadline to submit the online discount workflow**

#### March 2022

- Friday 4: Deadline to settle the 3<sup>rd</sup> payment of tuition fees + Deadline to submit the Siblings' allowance request for the Spring semester 2021-2022 (students of the same family)
- Saturday 5 : Application of the financial penalty
- Monday 14-Friday 18: Midterm exams (without class suspension) for the Spring Semester 2021-2022
- Saturday 19: English/French/Arabic Proficiency Test + Math entrance exam for undergraduate programs (C1) including "Food Science Engineering & Agricultural Engineering"
- **Friday 25: Annunciation** Makeup of Friday of week 9 : to be scheduled by the Faculty
- Monday 21 – Thursday 24 : Advising for Summer session 2021-2022
- Monday 28 – Tuesday 5 April : Early registration for the summer session 2021-2022

#### April 2022

- Friday 8: Deadline to settle the 4<sup>th</sup> payment of tuition fees
- Saturday 9: Application of the financial penalty
- Saturday 9: English/French/Arabic Proficiency Test + Math entrance exam for undergraduate programs (C1) including "Food Science Engineering & Agricultural Engineering"
- Makeup sessions of Thursday and Friday of week 12: to be scheduled by the Faculty
- Monday 11: Comps Exam (CIII)
- Wednesday 13: Deadline to submit a request for a Double degree, double major, Academic minor, and change of campus for the Fall term 2022-2023

- **Friday 14 – Monday 25: Catholic and Orthodox Easter**
- Makeup session of Monday and Friday of week 13: to be scheduled by the Faculty
- Wednesday 20: Deadline for Withdrawal (W)
- Makeup session of Monday and Friday of week 14: to be scheduled by the Faculty
- Friday 29: Deadline to submit a readmission request for the summer session 2021-2022
- Friday 29: End of classes of the Spring semester 2021-2022
- Saturday 30: Deadline to submit the financial aid application for academic year 2022-2023 (current students)

#### May 2022

- **Saturday 1: Labor Day**
- **Tuesday 3: Eid el Fitr\***
- Thursday 5- Saturday 14: Final Exams of the Spring Semester 2021-2022
- Tuesday 17: Deadline to submit the Final grades of the Spring Semester 2021-2022
- Thursday 19: Deadline to submit a request to review a final grade of the Spring Semester 2021-2022
- Friday 20: Deadline to sit for a make-up final exam for the Spring semester 2021-2022
- Tuesday 24: Deadline to enter the Final year projects and Master Thesis grades, Deadline to complete the grades (I) of the Spring semester 2021-2022
- **Wednesday 25: Resistance and Liberation Day**
- Monday 30 – Tuesday 31: Confirmation of the Early-Registration and Registration for the Summer Session 2021-2022 for Undergraduate, Graduate and Postgraduates Studies programs (Settlement of the 1st payment of tuition fees for the Fall Semester: 2 working days prior to online registration)

#### June 2022

- Wednesday 1: Start of the financial aid application submission period for academic year 2022-2023 for applicants – potential students
- Saturday 4: English/French/Arabic proficiency test + Math entrance exam for Undergraduate Programs (CI) including "Food Science Engineering and Agricultural Engineering"
- **Sunday 5 – Monday 6: Pentecost Feast**
- Tuesday 7: Start of classes for the Summer session 2021-2022, Application for the non-cancellation of early registration penalty
- Monday 20: Tests and oral interviews for Graduate programs (CII)
- Monday 20-Tuesday 28: Early registration for the Fall semester 2022-2023
- Friday 24: Deadline for Withdrawal (W)

#### July 2022

- Saturday 2: English/French/Arabic proficiency test + Math entrance exam for Undergraduate Programs (CI) including "Food Science Engineering and Agricultural Engineering"
- Friday 8: End of classes for the Summer Session 2021-2022 and Comps Exam (CIII)
- **Monday 11 – Tuesday 12: Eid El Adha\***
- Thursday 14 -Monday 18: Final exams for the Summer Session 2021-2022
- Friday 15: Deadline to submit the financial aid application for academic year 2022-2023 (applicants-potential students) and English/French/Arabic proficiency test + Math entrance exam for Undergraduate Programs (CI) including "Food Science Engineering and Agricultural Engineering" + Competitive exam in Engineering
- Wednesday 20: Deadline to submit the Final grades of the Summer Session 2021-2022
- Friday 22: Deadline to submit a request to review a final grade of the Summer Session 2021-2022 and Tests and Oral interviews for Graduate programs (CII) (except for Business)
- Monday 25: Deadline to sit for a make-up final exam for the Summer Session 2021-2022
- Wednesday 27: Deadline to complete the grades (I) for the Summer Session 2021-2022

- Friday 29: Deadline to submit a change of program request for the Fall semester 2022-2023 and English/French/Arabic proficiency test + Math entrance exam for Undergraduate Programs (CI) including "Food Science Engineering and Agricultural Engineering" and Deadline for applying for a transfer for the Fall semester 2022-2023

- **Saturday 30: New Hegira Year\***

#### August 2022

- **Monday 8: Achoura\***
- Thursday 11: English/French/Arabic proficiency test + Math entrance exam for Undergraduate Programs (CI) including "Food Science Engineering and Agricultural Engineering" + Competitive exam in Engineering
- **Monday 15: Assumption**
- Tuesday 16: Deadline to submit a Readmission request for the Fall semester 2022-2023
- Thursday 18: Tests and Oral interviews for Graduate programs (CII)
- Friday 19: English/French/Arabic proficiency test + Math entrance exam for Undergraduate Programs (CI) including "Food Science Engineering and Agricultural Engineering"

# Academic Rules and Student Life

## A. Academic Information

### A1. Credit System

#### A1.1 The Credit

The biannual credit is the measuring unit of the number of hours per semester.

In the system adopted by the Holy Spirit University of Kaslik, one credit represents one teaching hour (50-minute course) per week during a 15-week semester (including examinations and tests). Therefore, a three-credit course generally represents 45 hours of attendance, including examinations. As for practical activities, tutorials, group work or laboratory activities, they represent 30 hours of attendance for every credit.

1 credit = 15 teaching hours / semester

1 credit = 30 hours of practical, directed or laboratory activities / semester

Internships in companies and hospitals, as well as projects are subject to specific regulations.

Every diploma/degree has a specific number of credits specified in the University Catalog. Credits facilitate flexibility among various university programs, as well as the mobility of students. Acquired credits are capitalized and can sometimes be transferred from one Academic unit to another: or even from one university to another.

#### A1.2 The Course

A course is composed of one or more credits and is academically managed by the Academic unit that determines its contents according to the objectives defined by the program of studies. Every course has its own requirements, and the student cannot be registered for a course without the valid prerequisite/s, if applicable.

Class sessions are usually 75 minutes for MF and TTH classes. Students are required to wait 15 minutes before leaving if the instructor is late to class.

#### A1.3 The Semester

The academic year is divided into two semesters, Fall and Spring, in addition to a Summer session.

Every semester includes 14 effective teaching weeks and one week of final examinations. The Summer session includes, on average, 5 weeks, with 5 teaching days per week, including intensive courses and final examinations. It is worth mentioning that Summer session courses have exactly the same number of hours and evaluation criteria as Fall and Spring semesters.

#### A1.4 Student Workload

##### A1.4.1 Undergraduate Students

For Fall and Spring semesters, the minimum number of credits for a full-time Undergraduate student is 12 and the maximum number of credits is 18. A typical load for a full-time Undergraduate student is 15. Otherwise, students enrolled in less than 12 cr are considered as part-timers.

Following the approval of the Associate Dean, a student can register in a maximum of 21 credits, in certain circumstances considered as necessary. At the School of Medicine and Medical Sciences, this approval requires the students to have a cumulative AVG of 85/100 (Summer session included).

Students with a cumulative GPA of 3.00 (new grading system) and above are allowed to register a maximum of 21 credits in a semester.

Students with a good academic standing, a cumulative GPA of less than 3.00 but not less than 2.00, and after the approval of the Dean/Associate Dean, may petition to register a maximum of 21 credits if they are graduating.

A student on probation can only be registered for 12-13 credits. He/she is advised to register in the course that he/she has to repeat in order to get out of the probation status.

**N.B.:** A student enrolled in a Double Degree can register in a maximum of 21 credits per semester. However, a minimum of 12 credits should be dedicated to the major program.

For the Summer session, Undergraduate students can register for a minimum of 1 credit and a maximum of 6 credits. Following the approval of the Associate Dean, a student can, in certain cases, register for a maximum of 9 credits. Students on probation can only register for courses they have to repeat and for a maximum of 6 credits.

#### **A1.4.2 Graduate Students**

##### a) 1 year Master programs

Minimum and maximum numbers of credits are defined in the program's study plan.

##### b) 2 year Master programs (30 to 39 credits)

For Fall and Spring semesters, the minimum number of credits for a full-time Graduate student is 6 and the maximum is 12. Following the approval of the Associate Dean, a student can register in a maximum of 15 credits. A minimum of 21 credits and a good academic standing are required before registering in the Master Thesis A.

A student on probation can only register for courses that he/she should repeat and for a maximum of 12 credits. He/she is advised to register in the course that he/she has to repeat in order to get out of the probation status.

***N.B.:*** A student enrolled in a Double Degree can register in a maximum of 15 credits per semester. However, a minimum of 9 credits should be dedicated to the major program.

For the Summer session, Graduates students are only eligible to register in the Thesis B extension (2nd registration in Thesis B) assuming they will defend their Thesis in Summer.

##### c) 2 year Theology Master program (60 credits)

Graduate students who are enrolled in the C2 Theology program can register a maximum of 15 credits and up to 30 credits during their last semester.

## **A2. Program Framework**

USEK offers a wide range of programs leading to a degree such as Bachelor, Master or PhD which defines the students' educational level.

### **A2.1 Degree**

The Bachelor degree is offered according to a predefined structure, consisting of 96 credits at least, and offered in the form of major, elective and general education courses.

Students who fulfill all academic requirements to the sophomore year along with one academic major requirement (overall credits are at least 126 credits including 30 credits from the Lebanese baccalaureate or freshman) will be granted a diploma indicating their academic major and degree.

### **A2.2 Major**

The field of academic specialization within the Bachelor degree. It is defined as the departmental requirements set forth in the catalog, having a minimum of 48 credits. Interdisciplinary majors may include courses from more than one related academic discipline.

### **A2.3 Emphasis**

The Emphasis consists of a set of courses in a "specialized area" within a major and is considered as part of the major curriculum. Emphases are available only to students enrolled in the major under which the Emphasis is listed.

To declare an Emphasis, students submit a Declaration Form to the Registrar Office. The form requires the approval of the Head of the department offering the Emphasis.

Students must meet minimal course and grade requirements, as determined by the Head of the department offering the Emphasis or have to go through the required admission procedure (when needed) in order to be accepted into the desired Emphasis.

Emphasis requirements will follow the catalog year of the student's primary major. Emphasis cannot be awarded after a Bachelor's Degree is awarded.

## A2.4 Double Major and Academic Minor

Students with diverse and multiple areas of interests can consider adding to their primary academic major a double major, a double degree or a minor which will allow them to explore another field of inquiry in parallel to their main subject of specialization.

### **A2.4.1 Double Degree (two diplomas)**

Students cannot apply simultaneously for a minor program and a double degree. The double degree is an academic path that leads to two different diplomas. The students are expected to fulfill the graduation requirements of two different academic majors, not necessarily within the same Academic unit or with similar degree structure. By the end of the academic path, the students will earn two diplomas. Students are requested to fulfill the General Education requirements once. The student cannot register more than 2 programs nor have more than 2 diplomas within the same level. To declare a double degree, students submit a request at the Registrar Office. The request requires the approval of the Head of the department offering the primary major and the approval of the Head of the department offering the second degree.

Students must meet minimal major course and grade requirements, as determined by the Head of the department offering second degree or have to go through the required admission procedure (when needed) in order to be accepted into the desired program.

The second-degree requirements will follow the catalog year of the student's primary major.

### **A2.4.2 Academic Minor**

Students cannot apply for two minor programs at the same time. Academic minors are reserved for undergraduate studies and organized around a specific set of objectives, defined according to each field, which are achieved through a set of structured courses, not necessarily related to exclusively one discipline. Minors are expected to provide students with necessary knowledge and primary competencies.

Academic minor consists of 15 to 21 credit hours depending on the chosen subject, as specified in the catalog, with at least 9 credits chosen from courses at the upper level (code 300 or above). A group of courses are offered to students allowing them to choose the topics that they may be interested in to complete the required credits, while maintaining a degree of flexibility.

Courses taken in a minor may be transferred to fulfill other academic requirement, e.g. majors, general education, without reducing or affecting the minimum number of credits required for a degree. No more than 6 credits may be counted as transferred credits (from another institution). However, students enrolled in a double degree cannot apply for a minor. Students cannot apply for a double minor as well.

To declare a minor, students should submit a request at the Registrar Office or online upon completing 30 credits of major study. The request requires the approval of the Head of the department offering the primary major and the approval of the Head of the department offering the minor. The deadline for declaration of minor is the 13<sup>th</sup> week of a semester. However, no student can declare a minor in the same discipline of his major.

Students must meet minimal course and grade requirements, as determined by the Head of the department offering the minor, to be accepted into the desired minor. Hence, students are not allowed to register for more than 21 credits per term from which 12 credits pertain to the major and 9 credits to the minor.

The minor requirements will follow the catalog year of the student's primary major. The minor will not be awarded after a Bachelor's Degree is awarded.

The academic minor will be indicated on the student's transcript and not on the diploma. Its AVG is calculated along with the overall AVG of the major.

### **A3. General Education**

General Education aims to endow students enrolled in the Undergraduate studies program with value learning, intellectual inquiry and cultivation of particular skills to become thoughtful and engaged and active citizens of the country, the region and the world while bringing them to a critical and appreciative understanding of religious tradition, ethical theories and more development.

To this end, 30 credits of the Undergraduate studies curriculum are devoted to General Education that includes basic general knowledge, common and proper to USEK while taking into consideration that students who are enrolled in professional fields such as sciences and engineering should be exposed to the humanities and social sciences and students enrolled in humanities fields should be aware of natural sciences and quantitative reasoning:

- English and French Communication (3 to 6 credits)
- Religious Sciences (3 credits)
- Quantitative Reasoning (3 to 9 credits): Mathematics / Statistics / Information Technology
- Civic Engagement (2 credits)
- Sports (1 credit)
- Arts and Humanities (3 to 6 credits): Ethics and Justice / Arts / Philosophical Inquiry / Literature
- Social Sciences (3 to 9 credits): Behavioral Studies / Politics / History and Entrepreneurship & Innovation.
- Sciences and Health (3 to 9 credits): Biology / Chemistry / Physics / Agriculture / Nutrition / Environment / First Aid and Emergency Care

For more details, please refer to the General Education requirements in the University Catalog.

### **A4. Advising and Academic Support**

Upon registration and for the duration of their enrolment, students can refer to their assigned Academic Advisor. This Advisor should be a full-time faculty member appointed by the Dean/Director according to the student's program. The period of the academic advising is fixed during each semester in the Academic Calendar.

The Academic Advisor guides the student's choices and informs him/her about the current regulations.

When the student changes his/her academic cycle or program, he/she refers to the new Academic Advisor assigned by the Dean of the relevant new Academic unit.

This process, as of Spring 2018, has been automated and done through MyDegree, the new academic advising and auditing platform, for students admitted starting academic year 2017-2018.

## **B. Admission**

### **B1. Admission Application**

#### **B1.1 Admission Form**

The admission application can be downloaded from the University website or taken directly from the Admissions Office or filled online. The applicant can make the choice of three majors in his/her file.

The admission application should be completed, returned and accompanied with all the required documents, to the Admissions Office within the deadline specified in the Academic Calendar. This application, along with the submitted official documents, remain the property of USEK and will be confidential.

Students with incomplete files will be admitted to USEK as regular students under condition to deliver to the Admissions office the required documents no later than one semester. if the file remains incomplete, an admission hold will be placed on the student's record, prohibiting him from registering for the next semester.

The voluntary transcription of incorrect information and submission of falsified documents, will automatically lead to the annulment of the admission request. The applicant can Only request copies of the submitted document(s).

### **B1.2 Documents required for the Freshman Program**

- Photocopy of the national identity card or photocopy of valid passport (for international students);
- Two recent passport-size photos;
- The permission to continue studying the foreign curriculum (from the Equivalence Committee of the Lebanese Ministry of Education);
- A high school diploma or school leaving certificate;
- SAT I scores, if any.

### **B1.3 Documents required for Undergraduate Studies**

- Photocopy of the national identity card or photocopy of valid passport (for international students);
- Two recent passport-size photos;
- A photocopy of the grades' transcript of the last three high-school classes (school and/or technical) certified by the school (the first two trimesters for Gr12 classes in case the admission file is submitted before the end of the ongoing academic year);
- The certificate of the Lebanese Baccalaureate or an equivalent degree, certified by the Lebanese Ministry of Education and Higher Education, when needed.
- Original recent certificate of the coverage of the National Social Security Fund or its equivalent.

### **B1.4 Documents required for Graduate Studies**

- Photocopy of the national identity card and a recent family civil extract (for Lebanese applicants) or photocopy of valid passport (for international students);
- Two recent passport-size photos;
- The certificate of the Lebanese Baccalaureate or an equivalent degree certified by the Lebanese Ministry of Education and Higher Education, when needed;
- Certified copy of university degree(s) equivalence by the Ministry of Education and Higher Education in Lebanon, when needed;
- Official grades transcript(s) covering all previous academic work  
**N.B.:** Applicants with academic work in progress who expect to complete an Undergraduate degree program before the intended date of enrollment at USEK must submit evidence of degree conferral and a final academic record, as soon as they are available. The Undergraduate degree must be completed prior to the start of the Graduate studies;
- Two recommendation letters given by academic referees who know the student well  
**N.B.:** Each referee should send the letter in a sealed envelope, with his/her name signed across the seal, directly to the Admissions Office;
- A motivation letter;
- A curriculum vitae (C.V.) or e-portfolio;
- Certificate(s) of employment, if applicable;
- Original recent certificate of the coverage of the National Social Security Fund or its equivalent  
**N.B.:** USEK students who wish to pursue their Graduate studies at USEK should only attach two recent passport photos to the Graduate Admission Application Form.

## **B2. General Admission Requirements**

An applicant to USEK should fulfill the following general admission requirements:

### **B2.1 Undergraduate Studies**

1. Be a holder of the Lebanese Baccalaureate or of an equivalent diploma (depending on program requirements):
  - Lebanese high school baccalaureate: Life Sciences - *LS*, General Sciences - *GS*, Literature and Humanities - *LH*, Economics and Sociology - *ES*
  - Lebanese technical baccalaureate. In this case, admission depends on compatibility between the chosen technical field and the university program being considered.

- Freshman Arts or Freshman Sciences degree
- 2. Have completed an admission form for the Undergraduate studies program, filled online or at the Admissions Office, along with the required documents.
- 3. Have sufficient knowledge of the teaching language(s) of the chosen program and demonstrate a required level of English language proficiency (see section B3).
- 4. Meet the admission requirements of the chosen program (see section B4).
- 5. Pay the file opening and admission test fees; these non-refundable fees should be paid beforehand at one of the banks specified by the University.

### B2.2 Graduate Studies

1. Be a holder of an Undergraduate degree or its equivalent, recognized by the Lebanese Ministry of Education and Higher Education.
2. Get the recommendation of the related unit's Graduate Admission Interview Committee.
3. Meet the additional admission requirements of the chosen program, if any.
4. Have completed the Graduate Admission Form, available at the Admissions Office, which should be submitted along with the required documents.
5. Pay the file opening and admission test fees; these non-refundable fees should be paid beforehand at one of the banks specified by the University.

## B3. Language Proficiency Requirements

### B3.1 Proof of Language Proficiency for Undergraduate programs

The language proficiency requirements are defined based on the delivery language of the program for which the candidate is applying. The program delivery language could be:

- **English:** Courses fully delivered in English
- **Hybrid:** Courses in hybrid programs are delivered in English, French and Arabic

#### B3.1.1 English requirements (for all programs)

Students admitted to USEK must demonstrate a level of English proficiency by presenting one of the standardized tests accepted by the University or USEK English Proficiency Test. Below are the recommended minimum scores for all the tests, accepting that these scores may be changed without prior notice:

- Redesigned SAT I Evidence-Based Reading and Writing 550 / 800 or Essay SAT 16/24
- Paper Based TOEFL PBT550/670
- Internet Based TOEFL IBT 80 / 120
- Computer Based TOEFL CBT213 / 300
- IELTS 6/9
- USEK-EPT English proficiency test 70 / 100

**Standardized tests:** Details on standardized tests could be verified at the following link:

<http://www.amideast.org/lebanon> for applicants in Lebanon.

USEK's **College Board code number is 7061**. This code allows our institution to receive SAT scores automatically.

**USEK English proficiency test USEK-EPT:** This test is carefully designed to measure a candidate's level of proficiency in the English language, and place him/her in the appropriate English course. It includes sections on structure and language use, vocabulary and written response, reading and comprehension, and essay writing.

**Placement rules:** According to his/her results and based on the following rules, a student may have to enroll in an English Language remedial program (ENG130 and ENG140) equivalent to 9 to 15 credits:

| English remedial courses | Redesigned SAT I | TOEFL PBT | TOEFL IBT | TOEFL CBT | IELTS | USEK-EPT |
|--------------------------|------------------|-----------|-----------|-----------|-------|----------|
|--------------------------|------------------|-----------|-----------|-----------|-------|----------|

|                                                                                                              |         |         |       |         |       |       |
|--------------------------------------------------------------------------------------------------------------|---------|---------|-------|---------|-------|-------|
| <b>ENG130-Basic English 9 cr</b><br>Students taking ENG130 are not allowed to start with their major courses | 200-430 | ≤450    | ≤56   | ≤152    | ≤4.5  | ≤50   |
| <b>ENG140-Academic English 6 cr</b>                                                                          | 431-549 | 450-549 | 57-79 | 153-212 | 5-5.5 | 55-65 |

### **B3.1.2 French requirements (for hybrid programs)**

Students coming from French background schools are evaluated upon their school grades by the Admission and Transfer Committee and may be exempted from the 6 credits remedial courses in French language if they show evidence of French language proficiency. (*French General average = 10/20 on the first and second secondary class*).

Students coming from an English background are required to follow an intensive French language remedial program equivalent to 6 credits.

DELFL B2 or TCF B2 applicants will be exempt from the French remedial courses.

### **B3.1.3 Arabic requirements (for specific programs)**

Some programs may also require an Arabic proficiency level. A student's Arabic proficiency level will be evaluated upon the school grades by the Admission and Transfer Committee and he/she may be exempt from taking a three-credit remedial course in Arabic if he/she shows evidence of Arabic proficiency. (*Arabic General Average = 10/20 on the first and second secondary class*).

## **B3.2 Proof of Language Proficiency for Graduate programs**

All graduate applicants will be evaluated based on the transcripts and the interview conducted as part of the admission process. If needed, they will have to pass the language proficiency tests.

### **B3.3 Language remedial courses**

A student admitted under the condition of following remedial courses should register for these courses upon his/her first semester at USEK. Any violation of this rule will lead to the termination of his/her admission.

| English remedial courses                                                                                     | Redesigned SAT I | TOEFL PBT | TOEFL IBT | TOEFL CBT | IELTS | USEK-EPT |
|--------------------------------------------------------------------------------------------------------------|------------------|-----------|-----------|-----------|-------|----------|
| <b>ENG130-Basic English 9 cr</b><br>Students taking ENG130 are not allowed to start with their major courses | 200-430          | ≤450      | ≤56       | ≤152      | ≤4.5  | ≤50      |
| <b>ENG140-Academic English 6 cr</b>                                                                          | 431-549          | 450-549   | 57-79     | 153-212   | 5-5.5 | 55-65    |

The minimum grade to validate a remedial course is 60/100. However, this grade will be mentioned on the academic transcript as a "PR".

In the Undergraduate Program, a remedial course cannot be taken more than two times (can only be registered twice maximum) under penalty of being excluded from the University. Nevertheless, the student can present a petition at the Student Affairs Office asking to reconsider his/her case for one last chance before exclusion.

## **B4. Specific Admission Requirements for the Chosen Program**

Applicants to USEK should meet the specific requirements of the chosen program.

### **B4.1 Undergraduate**

Undergraduate studies at USEK consist of 4 academic years of education (Freshman, Sophomore, Junior, Senior) with a minimum of 126 total credits.

Freshman - a student completing 1 to 25% of his undergraduate credits

Sophomore - a student completing 25 to 50% of his undergraduate credits

Junior - a student completing 50 to 75% of his undergraduate credits

Senior - a student completing 75% or more of his undergraduate credits

All **undergraduate** students are required to complete 30 credits of Freshman courses, automatically granted for holders of the Lebanese Baccaalaureate or any other recognized diploma by the Ministry of Education and Higher Education, 30 credits of General Education courses and a minimum of 66 credits pertaining to the program of study.

There are 3 types of admission applicants at the undergraduate level:

a- Freshman

Students completing 12 years of schooling can apply to the freshman level at USEK after getting the permission to continue studying the foreign curriculum from the Equivalence Committee of the Lebanese Ministry of Education and Higher Education.

- Freshman Admission Requirements:
  - Filled Application and submitted to the Admissions Office within the specified deadline available on the Academic Calendar;
  - Photocopy of the national identity card or photocopy of valid passport (for international students);
  - Two recent passport-size photos;
  - The permission to continue studying the foreign curriculum (from the Equivalence Committee of the Lebanese Ministry of Education);
  - High School certificate based on 12 years of schooling, starting with grade I, awarded by a public or private school and recognized by the Lebanese Ministry of Education and Higher Education;
  - A Proof of Language Proficiency by submitting SAT I scores.  
Applicants are expected to have score for Redesigned SAT I (Evidence-Based Reading and Writing + Math) 1000/1600 when applying to the program. Upon completion of the Freshman year, they are expected to sit for the Redesigned SAT II and score as follows:  
Freshman Arts: a minimum of **2150** on both Redesigned SAT I and Redesigned SAT II (SAT I + SAT II)  
Freshman Sciences: a minimum of **2300** on both Redesigned SAT I and Redesigned SAT II (SAT I + SAT II).
- Freshman Program:

Freshman Arts

|                                                        |                     |
|--------------------------------------------------------|---------------------|
| <b>Humanities</b>                                      | <b>6</b>            |
| ENGL140 – English Communication Skills                 | 3                   |
| ELL101 – English Literature                            | 3                   |
| <b>Social Sciences</b>                                 | <b>3</b>            |
| SOC100 – Introduction to Sociology                     | 3                   |
| <b>Natural Sciences</b>                                | <b>3</b>            |
| BIO101 – Introduction to Biology                       | 3                   |
| <b>Mathematics</b>                                     | <b>3</b>            |
| MATH101 - Mathematics                                  | 3                   |
| <b>Electives</b>                                       | <b>15 out of 18</b> |
| PSY101 – General Psychology                            | 3                   |
| CHM102 – Introduction to Chemistry                     | 3                   |
| ECO100 – Introduction to Economics                     | 3                   |
| PHI100 – General Philosophy                            | 3                   |
| HUM103 – History of Civilizations                      | 3                   |
| NUT101 - Introduction to Human Nutrition and Dietetics | 3                   |
| <b>Total</b>                                           | <b>30</b>           |

## Freshman Sciences

|                                                        |                    |
|--------------------------------------------------------|--------------------|
| <b>Humanities</b>                                      | <b>6</b>           |
| ENGL140 – English Communication Skills                 | 3                  |
| ELL101 – English Literature                            | 3                  |
| <b>Social Sciences</b>                                 | <b>3</b>           |
| SOC100 – Introduction to Sociology                     | 3                  |
| <b>Natural Sciences</b>                                | <b>6</b>           |
| BIO101 – Introduction to Biology                       | 3                  |
| CHM102- Introduction to Chemistry                      | 3                  |
| <b>Mathematics</b>                                     | <b>6</b>           |
| MATH101 – Mathematics I                                | 3                  |
| MATH102 – Mathematics II                               | 3                  |
| <b>Electives</b>                                       | <b>9 out of 18</b> |
| PHY101 – Introduction to Physics                       | 3                  |
| PHI100 – General Philosophy                            | 3                  |
| PSY101 – General Psychology                            | 3                  |
| ECO100 – Introduction to Economics                     | 3                  |
| HUM103 – History of Civilizations                      | 3                  |
| NUT101 - Introduction to Human Nutrition and Dietetics | 3                  |
| <b>Total</b>                                           | <b>30</b>          |

b- Sophomore

Students applying to the Sophomore year should have completed one of the following:

- 12 years of schooling and a Freshman program at USEK or any other recognized university.
- 12 years of schooling and a Lebanese Baccaureate diploma, or any equivalent, recognized by the Ministry of Education and Higher Education. Baccaureate holders are automatically granted 30 academic credits equivalent to the Freshman year credits.

- Sophomore Admission Requirements:

- Filled Application and submitted to the Admissions Office within the specified deadline available on the Academic Calendar;
- Photocopy of the national identity card or photocopy of valid passport (for international students);
- Two recent passport-size photos;
- A photocopy of the grades' transcript of the last three high-school classes (school and/or technical) certified by the school (the first two trimesters for Gr12 classes in case the admission file is submitted before the end of the ongoing academic year);
- The certificate of the Lebanese Baccaureate, Freshman diploma or an equivalent degree, certified by the Lebanese Ministry of Education and Higher Education, when needed.
- Original recent certificate of the coverage of the National Social Security Fund or its equivalent, if applicable.
- A Proof of Language Proficiency refer to section B3 "Language Proficiency Requirements" of the Academic Rules and Student Life.

- Program Specific Requirements:

- 1-**Architecture Programs:** Applicants are expected to score on the Redesigned SAT I (Evidence-Based Reading and Writing + Math)  $\geq 1200/1600$  or USEK Math Entrance exam  $\geq 70/100$ .
- 2-**Business Programs:** Applicants are expected to score on the Redesigned SAT I (Evidence-Based Reading and Writing + Math)  $\geq 1100/1600$  or USEK Math Entrance exam  $\geq 70/100$ .

**3-Humanities and Art Programs:** Applicants are expected to demonstrate language proficiency for university level and score on the Redesigned SAT I (Evidence-Based Reading and Writing)  $\geq$  550/800.

**4-Engineering Programs:** Agricultural Engineering applicants are expected to score on the Redesigned Sat I (Evidence-Based Reading and Writing + Math)  $\geq$  1100/1600 or USEK Math Entrance Exam  $\geq$  70/100.

For all other Engineering majors, applicants are expected to score on the Redesigned SAT I (Evidence-Based Reading and Writing + Math)  $\geq$  1250/1600 (where Math  $\geq$  650) or USEK Engineering Entrance Exam  $\geq$  75/100.

**5-Medicine Programs:** Applicants are expected to pass the USEK Medicine Entrance Exam, required for students applying for BS in Health Fundamental Sciences. Students wishing to join the Medical School may require MCAT scores (refer to the Faculty concerned).

**6-Sciences Programs:** Applicants are expected to score on the Redesigned SAT I (Evidence-Based Reading and Writing + Math)  $\geq$  1100/1600 or USEK Math Entrance exam  $\geq$  70/100.

SAT scores could be sent automatically to USEK's College Board code number 7061.

| Undergraduate programs                                                              | Common requirements                                                  | Specific admission requirements for the chosen program                                                                           |

c- Transfer : refer to section B5 Admission Tracks and Specific Requirements / Admission by File Transfer.

#### B4.2 Graduate

- For USEK students willing to pursue their Master degree at the same department/school:
  - Oral/written tests, interviews, portfolios and recommendation letters are not required, except for the Business School who requires oral and written tests. Applicants only need to fill a Graduate Admission form and pay the admission fees.
  - Only BS in Architectural Studies students are automatically admitted to the Master program without submitting an admission form or paying admission fees. However, students will be

required to inform the Registrar's Office in case they would not like to pursue their graduate studies.

- For USEK students willing to pursue their Master degree at a new school or Non-USEK students willing to pursue their Master degree at USEK:
  - Graduate admission form, admission fees, interviews, portfolios and recommendation letters are mandatory for admission to all Graduate programs and apply for all applicants. Tests may apply to particular programs (refer to the concerned faculty/school).

## **B5. Admission Tracks and Specific Requirements**

There are four tracks for admission into the Undergraduate studies program at USEK:

- Regular admission
- Admission on file
- Admission on title
- Admission by file transfer

Regardless of the chosen admission track, the candidate should abide by:

- General admission requirements;
- Language proficiency requirements;
- Specific requirements for the chosen program;
- Specific requirements for the chosen track.

### **B5.1 Track 1: Regular Admission**

All applicants fulfilling the General Admission requirements and Language proficiency requirements are eligible for Regular Admission to sophomore within the predefined deadlines.

### **B5.2 Track 2: Admission on File**

Admission on file is available to Grade 12 students. Grade 12 students should submit their completed files to the Admissions Office according to the dates determined in the Academic Calendar, available on the USEK website or from the Admissions Office. In case of linguistic deficiency in the teaching language of the target program, the file will be rejected.

The relevant Academic unit studies the applicant's file and decides on the admission on the following:

- The grades of the applicant during high school;
- The results of Redesigned SAT 1 (Math and Reading sections only) from the year before, if any;
- The mastery of the concerned languages;
- The letter of recommendation from the high school principal.

Applicants admitted on file are eligible to apply for a scholarship, according to the criteria specified by the regulations of granting Excellence Scholarships.

#### **Remarks:**

- The final admission of the applicant depends on passing the Lebanese Baccalaureate (or any other equivalent degree);
- Applicants to the Medicine program cannot submit an application for Admission on file. They are required to pass an entrance exam.
- Valid for the ongoing academic year

### **B5.3 Track 3: Admission on Title**

Those applicants with High Distinction in the official Baccalaureate are eligible for admission on title for the academic year following the baccalaureate. In case of linguistic deficiency in the language of the target program, the file will not be accepted.

The chosen faculty/school considers the applicant's file and decides on admission based on the following:

- The mastery of the concerned languages;
- The high school grades of the applicant;
- The letter of recommendation from the high school principal;
- The official grades of the Lebanese Baccalaureate or its equivalent.

Applicants admitted on title can benefit from a scholarship with an amount up to the full cost of study (excluding registration fees and NSSF). Maintaining the scholarship beyond the first year is dependent on the student's AVG and the regulations of granting Merit Scholarships.

**Remarks:**

- If a correlation is not found between the score of the applicant in the official exam, their grades in high school and the assessment given by the school, the admission will be refused;

**B5.4 Track 4: Admission by File Transfer**

Applicants who have previously pursued academic studies in another higher education institution recognized by the Ministry of Higher Education in their home country and fulfilling the General Admission requirements at USEK are eligible for Admission by file transfer.

A transfer request should be submitted through an admission application **within at least four weeks** prior to the beginning of the registration period along with all the required documents for admission to USEK, and the following additional documents:

- 1- Certified Academic transcript
- 2- Official Grading system from university of origin
- 3- Syllabus for all courses subject to transfer with detailed descriptions, number of credits, number of teaching hours.

Following the evaluation of the file by the hosting School/Faculty and the validation of the Admission and Transfer Committee, all transferable courses will be validated by the letter 'T' and displayed on the student's transcript.

The assessment of the credits likely to be transferred is based on Academic criteria set by the hosting School/Faculty and on the following USEK regulations:

- The number of transferred credits cannot exceed 49% of the total number of credits required for Undergraduate and Graduate studies and a maximum of 12 credits for Freshman
- All transferred credits are declared and validated during admission to the Holy Spirit University of Kaslik where a grade T will be assigned to the transferred courses - afterwards, no transferred credits can be added;
- If a student registers for a course at USEK that has already been transferred from another institution, this transferred course will be deleted from the transcript and replaced by the grade received in the course taken at USEK;
- Courses taken at USEK cannot be repeated at another institution and transferred back to USEK.
- Applicants under probation in their University of Origin are granted conditional transfer at USEK. The transferred credits will be effectively validated with a grade T upon successfully completing the first semester at USEK with a good academic standing.

"Transfer to the Engineering and Architecture programs is only accepted from higher education institutions recognized by the Lebanese Order of Engineers and Architects. Moreover, courses related to any ABET or NAAB accredited programs are subject to transfer if originating from ABET or NAAB accredited programs. Otherwise, transferred courses should be assessed adequately by the school, matching a minimum of 90% in terms of course description and content, to ensure that accreditation requirements are satisfied."

**B6. Admission Calendar**

Applicants are responsible for consulting the USEK Calendar on the University website to check for the schedule of the admission test, or they can refer to the Admissions Office directly.

**B7. Admission Validity**

The admission is only valid for the ongoing academic year for Undergraduate and Graduate studies. The applicant who does not register for one or two semesters during the academic year in which he/she is accepted, will lose his/her right of admission and he/she will have to submit a new application form to be studied according to the existing admission conditions.

No admission is authorized for the Summer session, noting that the first registration at USEK should take place during Fall or Spring semesters.

The admission to the Medicine, Engineering (except Food Engineering and Agricultural Engineering) and Architecture programs are only valid for one semester.

## **B8. Special Admission Types**

### **B8.1 Admission of Free Listener**

The *Free Listener* status enables interested candidates to register at USEK in order to take courses, without any previous conditions of having a diploma/degree or undertaking a test. Applicants for the *Free Listener* status have to fill an admission application at the Admissions Office, along with a photocopy of the identity card and two passport photos. The file will be examined by the Admission and Transfer Committee in cooperation with the Head of the Academic Unit related to the chosen courses.

The *Free Listener* will receive, at the end of the semester or of the Summer session, a certificate of attendance or a transcript with the grade U (Ungraded). If the *Free Listener* does not attend the class as a regular student, he/she will get the grade "R" and will not receive any certificate. He/she does not benefit from the scholarship granted to students (scholarships, student Social Security). The *Free Listener* must pay all the fees of registration and studies at the beginning of the semester.

**N.B.:** *Candidates for the status of Free Listener can register up to 18 credits at the Undergraduate level or 10 at the Graduate level per semester within the limit of available places in each course.*

### **B8.2 Non-Degree and Visiting Students <sup>(1)</sup>**

<sup>(1)</sup> A visiting student can be an international student coming to USEK not in the framework of an agreement as for the International Exchange Students.

The purpose of the application of non-degree and visiting students is to pave the way to their enrollment for a short period of study and not for a whole curriculum.

Applicants have to fill an admission application at the Admissions Office and submit the following documents:

- A completed application form;
- An official copy of school / university transcript with information about the rating scale;
- Two letters of recommendation required for visiting students: one from a school advisor and the other from a professor;
- A photocopy of passport or identity card (if local);
- Non-refundable registration fee of 100,000 LL or 67 USD.

To pay the costs of application and registration, applicants (s) who send their applications by mail should include a written check to the Holy Spirit University of Kaslik. The application fee can also be paid by bank transfer, in reference to the name of the applicant. Applicants who submit their applications personally should pay the expenses to the Accounting Office in the ground floor of Building A.

### **B8.3 Admission of a Visiting Student**

This category applies to a student who is currently enrolled in a degree program outside Lebanon, and who seeks to take courses at USEK as part of a recognized study abroad or of an experience of exchange and who wishes to apply or to transfer credits for courses taken at USEK to the curriculum of his/her university of origin.

Admission is normally offered during two semesters if the student enrolled in Fall semester at USEK or for two semesters if he/she starts from the Spring semester (registration may be extended for another semester depending on the course offerings and the results of the courses taken at USEK; the petition to this effect is fundamental).

Applicants should note the following:

- Visiting students must normally complete their studies in their universities of origin;

- Visiting students can normally take up to 18 credits of the Undergraduate program or 10 from the Graduate program per semester;
- Visiting students must be enrolled in an Undergraduate or a Graduate program at a university recognized outside Lebanon;
- Students' file is examined by the University Admission and Transfer Committee;
- Students must meet the language requirements in English and French.

The exemption is given to applicants whose native language is English or French, or to those who register ONLY in Arabic language courses.

**N.B.:** *The admission at USEK as a Free Listener or as a visiting student does not entitle the student to a regular study program at USEK.*

#### **B8.4 Admission of a Non-Degree Student**

For a student who does not want to graduate:

This category applies to students enrolled in an academic program recognized in Lebanon, having completed at least two semesters (24 credits minimum) and who do not wish to enroll in a study program at USEK. The *non-degree student* may take up to 18 credits per semester. Admission is normally offered for two semesters if the student enrolled in the Fall semester at USEK or for two semesters if he/she starts from the Spring semester (registration may be extended to another six months depending on the range of courses and on the results of the courses taken at USEK. The petition for this is fundamental).

Candidates must accept the following:

- Students can normally take up to 18 credits of the Undergraduate program or 10 from the Graduate program per semester;
- Students must have a high school diploma, a high school certificate recognized by the government or a higher level of education recognized by USEK;
- Students must have completed at least two semesters at another university recognized by USEK;
- Credits taken at USEK will be considered in USEK diplomas if the student wishes to apply as a student. He/she will then be accepted following the admission criteria;
- Students must meet the language requirements in English and French.

**N.B.:** *An exemption may apply.*

#### **B8.5 International Exchange Students**

##### **B8.5.1 Admission of Incoming Exchange Students**

This category applies to students enrolled in a degree program abroad in one of the USEK partner institutions (list of partners <http://www.usek.edu.lb/en/international/agreements-and-collaborations-by-country>), who wish to transfer credits taken at USEK to their university of origin.

Admission is normally offered for up to two semesters (Summer session may be added), with the possibility of extension upon the approval of the home university.

Applicants must submit the following documents:

- A completed application form;
- An official copy of university transcript;
- One letter of nomination from the university of origin;
- A photocopy of passport or identity card (if local).

Applicants should also note the following:

- Incoming Exchange Students shall be enrolled in an Undergraduate or a Graduate program at a university that has a signed agreement with USEK;
- Incoming Exchange Students must be nominated by their home university;
- Incoming Exchange Students are exempted from paying the tuition fees at USEK unless otherwise stipulated in the agreement signed with the university of origin;
- Incoming Exchange Students can normally take up to 18 credits of the Undergraduate program or 10 of the Graduate program per semester. Taking additional credits must be approved by the relevant department chair knowing that the student must pay the tuition fees of the total

- number of additional credits;
- Incoming Exchange Students must meet all linguistic requirements of the requested course;
- Incoming Exchange Students shall complete their studies at their university of origin;

#### **B8.5.2 Outgoing Exchange Students**

This category applies to students regularly enrolled at USEK and who seek to take courses abroad as part of a recognized program (exchange program to one of USEK partners, special programs, scholarships) and who wish to validate at USEK the credits earned abroad. The mobility period can be of a maximum of two semesters (Summer session may be added).

Applicants should note the following:

- Outgoing Exchange Students must be enrolled and active in an Undergraduate or a Graduate program at USEK;
- Outgoing Exchange Students must complete a minimum of 30 credits for Undergraduate and 9 to 12 credits for Graduate studies at USEK before going abroad;
- Outgoing Exchange Students must have a good academic standing;
- Outgoing Exchange Students are under the obligation of registering USEK equivalent courses and covering the inherent tuition fees in due dates to ensure course recognition;
- Outgoing Exchange Students must normally complete their studies at USEK after the mobility period;
- Credits registered abroad by Outgoing Exchange Students will be considered to be transfer credits and will appear as Pass or Repeat (P/R) on the transcript.
- Outgoing Exchange Students cannot benefit from a Merit scholarship for the next semester, even if he/she fulfills all the required conditions.

### **B9. Reorientation**

The reorientation process is applied when active students request a change of program as the university studies did not meet their expectations for their future career path.

In this case, the Admissions Office offers the needed guidance to current students to help them change their focus towards a most suitable major or program after dealing with the unwanted academic obstacles. Thus, students can find the necessary information about credits, transfers and the support and motivation to ease their transition which might be needed also in case of interruption of studies or a period of study abroad.

## **C. Registration**

### **C1. Early Registration**

During the sixth week of classes, educational orientation aiming at guiding students regarding their early registration is conducted within Academic units by the Head of the department and Academic Advisors. Students wishing to make a change in the program must submit their application before the deadline set on the Academic Calendar.

During the eleventh week, early registration takes place online. The period given to the online early registration is similar to that attributed to common registration (one week).

Online early registration is conditioned by the following criteria:

- The courses of the current semester are considered successfully completed (in other words, registration in the courses with the prerequisites is done).
- All courses registration restrictions should be respected as defined in the course catalog.
- The student is entitled to a maximum registration of 18 credits in Undergraduate programs and 10 credits in Graduate programs.
- During the registration period for the following semester, the code "PR" of the early registration carried out by the student must be confirmed online, by "Complete Registration".

- A student who fails to confirm or drop his/her courses during the registration period will be subject to a penalty fee.
  - If the prerequisite courses considered successful in the early registration are not successfully completed, the confirmation of courses attached therein cannot be made.
  - By the end of the semester, the student in Undergraduate programs placed in a probationary situation will only validate his/her registration from 12 to 13 pre-registered credits. Students in Graduate programs will validate the registration of 6 pre-registered credits.
- Non cancelation of early registration will be subject for a penalty fee. If students wish to cancel their respective early registration, they must send an email to the Registrar at [registrar@usek.edu.lb](mailto:registrar@usek.edu.lb) to initiate their request.

## **C2. Registration**

Course registration is done at the beginning of every semester or the Summer session, exclusively online according to the Academic Calendar. The student will have to confirm the courses chosen during the early registration period. For those who could not register within the established deadlines, it will be possible for them to undergo Late Registration during the Add/Drop period, but they will be subject to penalty fees.

For his/her first registration, the student confirms his/her choice of program in the Admissions Office or on the University website. After 24 to 48 hours, he/she can proceed with the settlement of the first payment of tuition fees at one of the banks listed in the admission application and on the University website.

The first installment of tuition fees includes: the registration fees, the National Social Security Fund fees fixed by the government, and the first term of tuition fees (the full table on the fees is available on the USEK website).

The amount of the first installment, fixed by the University, is similar for all students of the same program, regardless of the number of credits that the student is willing to register in, and even though he/she benefits from a financial aid (in this case, the financial adjustments will take place after the registration period). If the amount fixed by the University exceeds the tuition fees related to the student's semester (for example in case of a final year student), the student should then proceed to the secretariat of the related Academic unit who in turn will send an email to the Registrar Office who will proceed with the audit. He/she can then settle the first payment the next day.

Once the first payment of tuition fees is set up, the student can register his/her courses during the period defined by the Academic Calendar (the student should wait 48 hours at least after depositing the payment at the bank before being able to register his/her courses). The payment should therefore be paid within 48 hours before the end of the registration period. Otherwise, the student will have to undergo a Late Registration and pays a penalty for the amount announced during the registration period.

The student should consult in advance the timetable of the courses on the University website and register in his/her courses.

### **Steps to follow for course early registration / registration:**

- Consult in advance the course offering on the USEK website ([usek.edu.lb](http://usek.edu.lb)) and choose courses according to the chosen program. With the exception of final year students who have been issued exemption from this rule by the Head of Department, approved by the Dean, the student is required to register in 12 credits at least at the Undergraduate level and 6 credits at least at the Graduate level.
- Meet, in case of a need, with the Academic Advisor to choose his/her courses.
- Proceed to the online early registration / registration on the Banner Self-Service during the fixed registration period in the Academic Calendar.

***N.B.:*** During the Drop/Add period, the student should also consult his/her Academic Advisor. A student can Drop/Add any desired course online. A course in the course offering may be canceled for major administrative purposes at the end of the registration period. Students and teachers will be notified of its closure by the concerned authorities. The adjustment of registration may be done during the Drop/Add period.

### C3. Course Section Language

The University offers course sections in three languages: English, French and Arabic. While registering, the student should refer to the course section to make his/her choice:

- E: English section code
- F: French section code
- AR: Arabic section code
- Other languages: IT: Italian section code / CH: Chinese section code / PR: Persian section code / SP: Spanish section code / SY: Syriac section code / PT: Portuguese section code / LA: Latin section code / DE: German section code.

### C4. Registration Requirements for Specific Courses

#### C4.1 Remedial Courses

- 1- Students enrolled in Hybrid or English programs and having to take 2 remedial courses:
  - a- 'ENG130' (9 credits) & 'FRN140' (6 credits) should enroll in both remedials **ONLY** with a total of 15 credits during their first semester.
  - b- 'ENG140' (6 credits) and 'FRN140' (6 credits), can register up to 18 credits (12 remedial credits included) starting their first semester.
- 2- Students enrolled in Hybrid or English programs and having to take 1 remedial course:
  - a- 'ENG130' (9 credits) could enroll in it solely in their first semester or with a combination of courses with a minimum of 14 to a maximum of 15 credits during their first semester distributed as follows:
    - ENG130 (9 credits), SRO215 (3 credits), SOC217 (2 credits) and an optional Sports course (1 credit)

Or

    - ENG130 (9 credits), FRN240 (3 credits), SOC217 (2 credits) and an optional Sports course (1 credit)
  - b- 'FRN140' (6 credits) or 'ENG140' (6 credits) should enroll in the course during their first semester.

Note: A hold will be applied on the students upon the completion of their registration to avoid any modification in the course or set of courses registered.

#### C4.2 Tutorship course

A Head of Department can ask the Dean/Director of the Academic unit to allow a student to follow one tutorship course, only when all the following conditions are fulfilled:

- 1) The student is registered in his graduation term;
- 2) The student could not validate this course on time, for legitimate reasons and this course is not offered in the semester during which the student might finish his/her program;
- 3) The course cannot be taken externally;
- 4) The Department has checked for the approval of a specialized teacher in the Department.

Notwithstanding the above:

- No failed obligatory course can be subject to tutorship, unless the concerned course cannot be offered anymore due to a modification in the program.
- A student cannot be allowed to follow more than one tutorship course in his/her entire program.

#### C4.3 Master Thesis

The Master thesis is worth 3 to 9 credits and can be completed in one, two or three semesters.

During the first registration for the Master thesis, the student registers for module 6XX A during a semester and pays the corresponding tuition fees.

After this first registration, the student:

- obtains a numeral grade (grade received upon the thesis defense);
- or

- obtains the grade IP and should register in the following semester for the module 6XX B (while paying only the registration fees).

After the registration for the module 6XX B, the student:

- obtains a numeral grade (grade received upon the thesis defense);
- or
- obtains the grade IP and should register for the module 6XX B, for the last time (while paying only the registration fees).

**N.B.:** A student can only register for his/her thesis for 3 consecutive times in total (6XX A; 6XX B; 6XX B). When he/she exceeds these 3 registrations, the student will be given the grade R and should, in case he/she wishes to reregister, submit a request for exemption to explain the reasons of his/her new registration request for a new thesis. The Academic unit council studies the request of the student, who, in case of a positive response re-registers for the module 6XX A, and has to pay the registration fees and tuition fees according to the number of thesis credits he/she is registered for.

A student can only register along with his/her thesis 6XXB one course of 3 credits maximum.

### **C5. Administrative Substitution of a Course**

In exceptional circumstances, the Head of Department can ask the Dean/Director of the Academic unit to allow a regular student to follow a course other than the one included in the program, notably when this student is not able, for legitimate reasons, to follow this course as defined by the program, or when the course offering does not allow him/her to attend in the semester during which he/she might finish his/her curriculum. In this case, the course is replaced with another one of the same level within the same major and within the program's field of knowledge.

Notwithstanding the above:

- No failed obligatory course can be subject to administrative substitution, unless the concerned course cannot be offered anymore, due to a modification in the program.
- A student cannot be allowed to follow more than two substitution courses in undergraduate studies and one substitution course in his graduate studies.
- General Education courses cannot be substituted by major courses and *vice versa*.

### **C6. Cross-Registration**

Any student at the end of his academic path may attend one or two courses in another university, after having obtained first the authorization of the Registrar Office, his/her Department and the approval of the Dean/Director of his/her Faculty/School. The student should pass by the Admissions Office to fill in the respective form and to submit the required documents.

Courses attended in another institution should be deemed equivalent to those of the current program; the equivalency decision being issued by the Admission and Transfer Committee.

In order to be able to follow external courses, the Undergraduate student must abide by the following conditions:

- The student must be registered in his/her last semester;
- The student must not have failed his/her course(s) before;
- The courses attended in another university, should not be taught within the student's original Academic unit during the semester in question;
- The Head of the department must send, to the Registrar Office, a written statement certifying that all requirements are met by the student;
- The Registrar Office authorizes, in writing, the cross-registration. This authorization is delivered by the student to the hosting university.
- A non-graduating student may be granted a special authorization to cross register a course in certain circumstances deemed necessary;

The final grade for each course should be directly reported by the host university, according to the grading system adopted by USEK, to the Dean/Director of the Academic unit who will report it to the Registrar Office. This grade (T) will be registered on the academic transcript and is accounted for with the remaining grades, when calculating the student's Grade Average and General Average per Semester; In addition to the registration fees of USEK, the student should pay all the necessary fees of the host university.

## **C7. Changes to a Registration**

### **C7.1 Add/Drop**

Once registration is closed, a student can, if he/she wants, modify the registration during the Add/Drop period (as stated in the Academic Calendar). In order to do so, the student can add or drop online any desired course. A student who performs Add/Drop has to maintain his/her status as a full-time student (a minimum of 12 credits for undergraduate studies and a minimum of 6 for graduate studies). No courses can be dropped during the Summer session.

### **C7.2 Withdrawal**

After the Add/Drop period, every withdrawal from a course must be subject to a previously written request before the authorized due date, as fixed in the Academic Calendar. To this purpose, the student must submit a request at the Registrar Office. The deadline for the official withdrawal from a course is fixed, unless otherwise noted, at the 13<sup>th</sup> week of the semester (or 4<sup>th</sup> week of the Summer session). It is worth mentioning that an absence during midterms or finals does not lead, in any case, to the withdrawal from the course.

If a student is allowed to withdraw from a course, the latter will be displayed on his/her academic file with the grade W; the course fees cannot be reimbursed or deducted from the general fees the student has to pay. Furthermore, a withdrawal from a course does not lead to any modification in the student's University fees. In addition, a student, having withdrawn from a course during the semester, cannot apply for a scholarship of merit for the following semester, even if all other required conditions are fulfilled.

The withdrawal from a course will be refused if a student's credits per semester drop below the minimum number of 12 credits per semester for Undergraduate studies and a minimum number of 6 credits for Graduate studies.

### **C7.3 Term Withdrawal**

If a student cannot complete a semester and has to withdraw from all his/her courses after the Add/Drop period for major reasons, such as serious health problems or exceptional family circumstances, the University administration can attribute the grade WW (Term Withdraw) to each course. In order to obtain a Term Withdrawal, the student has to submit the relevant official form from the Registrar Office. If the withdrawal from a course is not officially done, the student will be given the failing grade FW (Fail to Withdraw) by the teachers concerned, for every course at the end of the semester.

#### **C7.3.1 Term Withdrawal and Fees**

A student who gets a WW grade, will have to pay all his/her University fees, as they were calculated during his/her registration.

**N.B.:** *A term withdrawal can only be granted to a student once during his/her university curriculum. A student cannot proceed with a term withdraw if he/she already interrupted his/her studies previously.*

### **C7.4 Deregistration**

Deregistration is the dropping of all courses during the registration and during Add/Drop period.

During the registration and add/drop period, the student can drop all his/her courses. For current students, students who have recourse to deregistration, while they were registered during the previous semester/session at USEK, the deregistration request must be accompanied by a request for the interruption of studies. The latter must also be submitted to the Registrar Office via an appropriate form and the interruption of studies will be noted in the student's academic file.

#### **C7.4.1 Deregistration and Fees**

In case of deregistration during the Add/Drop period, the student can ask the Registrar Office for a refund. First term medical students cannot apply for a refund of first payment. Then, the entire amount of study fees,

which have been already paid, will be refunded. However, the student has to pay a penalty, which amount is fixed by the University (to view the fees, consult the University website).

## **D. Tuition, Financial Aid and Scholarships**

### **D1. Registration Fees**

The registration fees for each semester are fixed by the University for all sections and Regional University Centers and are non-refundable (excluding academic services and Summer sessions). The fees are available on the University website.

### **D2. Tuition Fees**

The cost of a credit varies according to the level of studies and the chosen specialization. The complete table of fees is available on the USEK website. The cost of a credit is subject to change; the administration reserves the right to review and modify fees for the coming years. All likely modifications of a credit cost are reported in advance to students through bulletin boards, the University website and MyUsek. It is the responsibility of each student to keep well-informed with University news and announcements by regularly consulting these means of communication.

The fees are applied in all USEK branches. However, students registered in one of the three Regional University Centers automatically benefit from a 20% reduction on their tuition fees; this reduction does not include the fee for opening a file, the registration fee and the NSSF membership fee.

#### ***N.B.:***

- *A student registered in any of the three Regional University Centers of Zahle, Chekka and Rmeich and, thus, benefiting from a 20% subsidization of his/her study fees, will have to pay the full fees pertaining to the course credits attended on USEK's Kaslik campus; without any subsidy if the same course is given in his/her home campus.*
- *A student registered in the Kaslik campus does not benefit from the 20% subsidization of his/her study fees pertaining to the course credits in one of the three Regional University Centers of Zahle, Chekka and Rmeich.*
- *If the student registered in any of the three Regional University Centers of Zahle, Chekka and Rmeich, benefits from a scholarship or social aid, the amount in question will be applied to the subsidized tuition fees.*

### **D3. Membership Fees to NSSF**

Membership fees to the National Social Security Fund (NSSF), as fixed by the government, are annual. Students already affiliated to the NSSF, or an equivalent fund, are required to submit an exemption form at the NSSF Delegate Office to ensure that the fee paid in advance is credited to their account during the registration. The relevant form can be downloaded from MyUsek, the University Intranet and from the USEK website ([usek.edu.lb](http://usek.edu.lb)). It should be completed and submitted before the end of the fourth week of classes; the date is fixed in the Academic Calendar.

### **D4. Payment Procedure**

The student should pay his/her university fees in three installments per semester and two installments for the Summer session.

Failure to comply with payment installments, as stated in the Academic Calendar, will lead to a 5% financial penalty calculated according to the amount due. Students who do not settle their payment on time will not be able to continue with any administrative procedure.

It is the responsibility of each student to make sure that his/her tuition fees were paid within the deadlines established by the administration of the University.

## D5. Refund

No refunds are granted unless in case of deregistration (refer to: Refund after Deregistration).

## D6. Financial Aid

Faithful to the mission of the Lebanese Maronite Order, USEK is committed to help every Undergraduate student facing personal, relational, family, financial or medical difficulties without any discrimination related to religion, culture or nationality.

The Social Service Office proposes financial aid programs allowing the spreading out or the reduction of the tuition fees until the second year of studies. These donations are valid for one academic year, and are not automatically renewed. Applications must be submitted between April and June of the current year for the student to benefit from next year's reduction.

The office reserves the right to withdraw a granted financial aid in the following cases:

- Disciplinary action against the student;
- Student placed on probationary situation;
- Other reasons deemed plausible.

## D7. Scholarships

### **D7.1 Merit Scholarships**

Merit scholarships are calculated at the end of each Fall and Spring semesters. Qualified Undergraduate and Graduate students are notified by email (to the USEK student email).

All Merit Scholarship beneficiaries will have to pay the first installment of their tuition fees.

The Merit Scholarship discount applies to the student's entire tuition fees, excluding registration fees and the annual National Social Security Fund (NSSF) membership fees.

Remark:

- The Merit Scholarship does not cover the Summer session.
- The Merit Scholarship does not cover the Pontifical Faculty of Theology degrees and teaching diploma.

#### ***D7.1.1 Undergraduate Studies***

At the beginning of each semester, the University grants merit scholarships to students who have completed a minimum of 30 credits at USEK (excluding Freshman and remedial courses) with a cumulative GPA  $\geq 87/100$  in the Undergraduate Program and who meet the following criteria:

Students who rank first in their respective School/Faculty will be granted a 75% Merit Scholarship.

N.B.: Students who rank first in each division of the Faculty of Arts and Sciences (Humanities, Social Sciences, Sciences, and Music) will be granted a 75% Merit Scholarship.

| Cumulative GPA | Percentage |
|----------------|------------|
| 87.0 – 87.99   | 5%         |
| 88.0 – 88.99   | 10%        |
| 89.0 – 89.99   | 15%        |
| 90.0 – 90.99   | 20%        |
| 91.0 – 91.99   | 25%        |
| 92.0 – 92.99   | 30%        |
| 93.0 – 93.99   | 40%        |
| 94.0 – 94.99   | 50%        |
| 95.0 – 100     | 75%        |

#### ***D7.1.2 Graduate Studies***

At the beginning of each semester, the University grants merit scholarships to students who have completed a minimum of 9 credits at USEK with a cumulative GPA  $\geq 90/100$  and who meet the following criteria:

| GPA (Graduate Studies) | Percentage |
|------------------------|------------|
| 90.0 – 90.99           | 5%         |
| 91.0 – 91.99           | 10%        |

|              |     |
|--------------|-----|
| 92.0– 92.99  | 15% |
| 93.0 – 93.99 | 25% |
| 94.0 – 100   | 50% |

Students who rank first in their respective School/Faculty will be granted a 50% Merit Scholarship.

N.B.: Students who rank first in each division of the Faculty of Arts and Sciences (Humanities, Social Sciences, Sciences, and Music) will be granted a 50% Merit Scholarship.

**Remarks:**

- Graduate programs offered in collaboration with other universities (HEC Montreal, Paris II, LL.M. in International and Comparative Law, etc.) are not included in the scholarship list.
- The Merit Scholarship does not include the following programs:
  - o MBA in Human Resources
  - o MBA in Management & International Affairs
  - o Master of Laws in International & Comparative Law
  - o Master in Business Law
  - o Master in International Contracts
- Financially supported graduate programs are not included in the scholarship list.

**D7.1.3 Merit scholarships are forfeited in any of the following cases:**

- a. Academic probation
- b. Change of academic program
- c. Interruption of studies
- d. Course(s) Withdrawal (W)
- e. Term Withdrawal (WW)
- f. Course failure
- g. Part-time enrollment (*less than 12 credits per semester for Undergraduate studies or less than 6 credits per semester for Graduate studies*)
- h. Enrollment in an exchange program (*grade P or R*)

## E. Assessment and Grading System

### E1. The Grading System

#### E1.1 The Grading Table

Courses at USEK are graded on a scale of 100. The final grade given by the instructor is converted to a letter grade corresponding to U.S. 4 points grading scale, where the final cumulative grade is called a GPA. The grade point average (GPA) is calculated by dividing the total amount of quality points earned by the total amount of credit hours attempted. The grade point average may range from 0.0 to a 4.0.

| Letter Grade | Quality Pts | Grade /100  |
|--------------|-------------|-------------|
| A+           | 4.0         | ≥93         |
| A            | 4.0         | 90-92       |
| A-           | 3.67        | 87-89       |
| B+           | 3.33        | 83-86       |
| B            | 3.0         | 80-82       |
| B-           | 2.67        | 77-79       |
| C+           | 2.33        | 73-76       |
| C            | 2.0         | 70-72       |
| C-           | 1.67        | 67-69       |
| D+           | 1.33        | 63-66       |
| D            | 1.0         | 60-62       |
| F            | 0           | 59 or below |

|                |                                 |
|----------------|---------------------------------|
| <b>IP</b>      | In Progress                     |
| <b>I</b>       | Incomplete                      |
| <b>W</b>       | Withdraw                        |
| <b>AW</b>      | Administrative Withdraw         |
| <b>WW</b>      | Term Withdraw                   |
| <b>FW</b>      | Fail to Withdraw                |
| <b>P / R</b>   | Pass / Repeat                   |
| <b>PR / RR</b> | Pass Remedial / Repeat Remedial |
| <b>T</b>       | Transfer                        |
| <b>U</b>       | <i>Free Listener</i>            |
| <b>G</b>       | Granted                         |

## E1.2 Calculating the Average (AVG) and the Grade Point Average (GPA)

### E1.2.1 Average (AVG)

The average (AVG) is calculated by multiplying the grade of each course by the number of credits of the course, then dividing the sum of the results (QPTs) by the total number of credits (AVG-Hrs). The highest grade in a repeated course is used in the calculation of the averages. Courses with indicators (A&E) are excluded from Earned (Ehrs) and Average (AVG-Hrs) credits.

### E1.2.2 Grade Point Average (GPA)

All registered courses will be included in the computation of the student's cumulative Grade Point Average. The Grade Point Average (GPA) is the ratio of the number of points gained to the number of credit hours attempted.

The following is an example of a semester GPA computation:

| COURSE   | NUMERIC GRADE | LETTER GRADE | NO. OF CREDITS HRS |   | QUALITY POINTS |   | TOTAL |
|----------|---------------|--------------|--------------------|---|----------------|---|-------|
| Course 1 | 61            | D            | 3                  | × | 1              | = | 3     |
| Course 2 | 92            | A            | 4                  | × | 4              | = | 16    |
| Course 3 | 75            | C+           | 3                  | × | 2.33           | = | 6.99  |
| Course 4 | 79            | B-           | 3                  | × | 2.67           | = | 8.01  |
| Course 5 | 59            | F            | 1                  | × | 0              | = | 0     |
|          |               |              | 14                 |   |                |   | 34    |

The semester GPA = Total semester quality points/Total semester credit hours attempted.

The semester GPA for the five courses stated above would be:  $34/14 = 2.42$ . Courses in which grades IP, I, P or R, and PR or RR have been given are not counted in computing the GPA. Similarly, W, AW, WW, FW, T, U, and G are not counted in computing the GPA.

The student has to ensure a minimum of 2.0/4.0 or a C on the Undergraduate level (3.0/4.0 or a B in Sciences and in Health Fundamental Sciences - Medicine) and 3.00/4.00 or a B on the Graduate level.

### E1.3 Alphabetical Grading

**Grade "A"**: indicates work of excellent quality. It is valued at four quality points for each credit hour.

**Grade "B"**: indicates work of good quality. It is valued at three quality points for each credit hour.

**Grade "C"**: indicates a satisfactory achievement. It is valued at two quality points for each credit.

**Grade "D"**: indicates the minimum passing grade, and is indicative of poor performance. It is valued at one quality point for each credit hour.

**Grade "F"**: indicates an unsatisfactory performance in the course. It has zero quality points. No credit will be added to the student's record.

**"IP" for In Progress**

The grade IP is attributed for a course in which the student is given additional time to complete all of its requirements. If it is deemed valid by the concerned teacher, in some exceptional circumstances, and after the approval of the Head of Department, the IP grade can be attributed to a course if it is administratively feasible. Therefore, the student is given additional time to complete all of its requirements. This delay should not exceed the deadline of the registration period of the following semester.

#### **“I” for Incomplete**

The temporary grade I is attributed by the teacher to a course when the student did not attend for the final evaluation, for justified and accepted reasons (not passing the final examination, internship report, presentation of final project, etc.).

On the grades transcript given by the teacher, the notation I is accompanied by the preliminary grade over 100 (i.e. 150, 160, etc.), which will then be considered as the final grade if the student does not fulfill his/her obligations, by the date limit fixed by the University Academic Calendar. It is impossible to change this grade; it is the responsibility of the student to pass his/her remedial examination or deliver his/her work on time.

#### **“W” for Withdraw**

The grade W is attributed to a course, when the student drops it within the allotted time fixed by the University Academic Calendar. This can be justified when the student considers that his/her mid-term grades will not allow him/her to pass the course; his/her average grade will not, therefore, be affected.

#### **N.B.:**

- *A student cannot withdraw from a course if this requires him/her to exceed the deadline in order for graduation.*
- *Absence during mid-terms or finals does not lead in any case to withdrawal from the concerned course.*
- *A student who repeats a required course in his/her program for the third time cannot withdraw from it. He/she cannot withdraw from a remedial course if it is the second time he/she is repeating it.*
- *A student who exceeds the allowed number of absences must withdraw from the course; otherwise, the course grade will be assigned as FW or R or RR depending on the type of the course.*
- *A student who withdraws from a course during a semester cannot apply for a scholarship for the next semester, even if he/she fulfills all the required conditions.*
- *A student who withdraws from a course will have to pay all his/her University fees, as they were calculated during his/her registration. This means that a withdrawal does not lead to any modification of University fees.*
- *Withdrawal from a course may be rejected if the number of credits falls below the minimum of 12 credits upon withdrawal for Undergraduate studies and a minimum of 6 credits for Graduate studies. For the Summer session, the minimum number of credits is 3 credits.*

#### **“WW” for Term Withdraw**

The grade WW is only attributed by the University administration when the student drops all his/her courses for major reasons keeping him/her from continuing the semester; such as, serious health problems, traveling, etc.

In order to obtain the Term Withdraw, the student has to officially apply for it by completing a specific form and submitting it to the Registrar Office. If the withdrawal is not officially completed, related teachers will give the student a “Fail to Withdraw” grade in every course.

#### **N.B.:**

- *A student who gets a “WW” grade, will have to pay all his/her University fees as they were calculated during his/her registration; meaning that an administrative withdraw will not lead to any modification of University fees.*
- *A student cannot withdraw from a course if this requires him/her to exceed the deadline in order for graduation.*
- *A student who repeats a required course in his/her program for the third time cannot withdraw from it. He/she cannot withdraw from a remedial course if it is the second time he/she is repeating it.*
- *A student who withdraws from a course during a semester cannot apply for a merit for the next semester, even if he/she fulfills all the required conditions.*

**“AW” for Administrative Withdraw**

This grade is only attributed by the University President or the Council of Discipline in case of violation of the regulations.

**N.B.:** A student who gets an AW grade, will have to pay all his/her University fees as they were calculated during his/her registration; meaning that an administrative withdraw will not lead to any modification of University fees.

**“FW” for Fail to Withdraw**

The FW grade is given for a course which the student stopped attending without having officially undergone the “Withdraw” procedure – or because he/she did not get the authorization to withdraw. This FW grade is taken into account when calculating the average grade and is equivalent to 40/100.

**N.B.:** A student who gets a FW grade will have to pay all his/her University fees. This means that a “Fail to Withdraw” grade does not lead to any modification of University fees.

Students who get the grade FW on all their courses during a semester will be excluded from their program of studies at the end of the semester.

**“P” for Pass and “R” for Repeat**

The grades P and R are given with particular courses, such as internships, etc. These courses are assessed with a non-numerical grade; as a result, they will not be taken into consideration while calculating the general average.

**“PR/RR” for Pass Remedial / Repeat Remedial**

This grade is attributed to the remedial courses (languages or mathematics courses).

**“T” for Transfer**

The grade T is given for validated transferred courses. A student cannot repeat a transferred course by registering for its equivalent in the Holy Spirit University of Kaslik.

**“U” for Free Listener**

The grade U is given for a course in which the student is registered as a free attendee, after the approval of the Head of Department and the Dean/Director. A *Free Listener* does not undertake the examinations of the course he/she is registered in. No grade can be converted into a “U” and vice versa. No “U” grade can be converted into a numerical grade. Failing to attend will result to an “R” grade.

**“G” for Granted**

The grade G is given for a number of credits of validated G courses in the context of a diploma/degree, which means that the courses are granted and students pursuing a higher diploma/degree would not have to repeat them.

**E1.4 Distribution of the Final Grade**

The overall grade is usually distributed as per the following scale knowing that on these percentages can vary between courses; however, they are defined and announced to the students during the first given sessions of the course. Nevertheless, the evaluation criteria are mentioned in the course syllabus distributed to the students in the beginning of the semester.

- **Attendance and Participation: 10%** it encourages participant’s active discussions.
- **Continuous assessment: 50%** it includes projects, assignments, research papers, mid-term; these are central indicators for student integration and understanding of the material learned thus providing reinforcement of work learned in class and helps students to get an idea of the work pace for later.
- **End of semester evaluation: 40%** Final examination (cannot exceed 45% of the final grade)

**N.B.:** It is noteworthy that this evaluation is applicable for courses given as lectures “C”, Tutorial Classes “TD”, Practical Works “TP”, in addition to Courses and Practical Works “CTP”. As for Projects “P”, Theses “TH”, Corporate Internship or Medical Internship “S”, and Seminar “SM”, they sometimes follow a specific regulation limited to the final assessment of the course (presentation of the final project, thesis defense, internship report, etc.).

The required passing grade to validate each course of a certain program is mentioned in the in the University catalog. In general, the passing grade of an undergraduate course is D (60/100) or P and for a graduate course is C (70/100) or P. Some courses may require a higher grade in order to meet degree program requirements. The student can, for valid and justified reasons, be absent for a number of teaching hours equal to three teaching weeks (20% of the course's number of hours; i.e. 9 hours (6 sessions of an hour and 15 minutes each) for a three credit course or 6 hours for a two credit course (4 sessions)).

Every student who exceeds the authorized limit of absences will not be allowed to present his/her final exam and will be given the grade FW (Fail to Withdraw).

The assessment of each requirement should be calculated over 100 and then balanced according to the percentage of each criterion, following the example below:

| Evaluation Criteria    | Grade over 100<br>Given to the Student | Final Grade over 100 |                    |
|------------------------|----------------------------------------|----------------------|--------------------|
|                        |                                        | Percentage           | Obtained Grades    |
| Positive Participation | 90/100                                 | 10 %                 | 9/10               |
| Projects and Research  | 80/100                                 | 10 %                 | 8/10               |
| Continuous Assessment  | 85/100                                 | 10 %                 | 8.5/10             |
| Midterm Exam           | 85/100                                 | 30 %                 | 25.5/30            |
| Final Exam             | 90/100                                 | 40 %                 | 36/40              |
| <b>Total</b>           |                                        |                      | <b>87/100 (A-)</b> |

Students who have failed a course requirement (exam, test, report, etc.) will be given the failing grade “Zero” for the requirement by the teacher. The sum of the obtained grades should reflect the learning outcomes.

#### **E1.5 Disclosure of Grades to Students**

Prior to the withdrawal deadline from a course, (date indicated in the Academic Calendar), a student has the right to know all his/her grades (participation, attendance, research and/or projects, midterms, quizzes, etc.) in order to decide whether he/she wants to withdraw from a course or not before the final exam. Therefore, it is necessary that the teacher discloses from 60% of the grades to the students before the 12<sup>th</sup> week of the semester, so they can decide whether they should continue with the withdrawal process.

The instructor is also required to give a qualitative feedback on the presentations prepared by the students and to advise them on the ways and means to advance and achieve the objectives of the course.

Students can obtain their final grade from the Banner Self-Service after they have completed the “Course Feedback Survey” (an assessment of the teachers of all their courses), before the deadline. If students do not meet this deadline, they will be obliged to complete the assessment in order to remove the “CFS Hold”. In the 13<sup>th</sup> week of the semester, students will be asked to complete this evaluation by email.

## **E2. Academic Standing**

All students are expected to maintain certain standards of academic achievement while enrolled in the program. Students have to check their academic position at the end of each semester by looking at their Banner account.

### **E2.1 Academic Recognition**

The university has assigned Academic Recognition policy enabling to identify and acknowledge students' excellent and distinguished progress.

#### **Undergraduate**

Undergraduate students who complete at least 12 credit hours in a semester (not including summer), with a GPA in the range of 3.67 to 3.99, are placed on the Honor List and a GPA of 4.00 are placed on the Distinguished List.

The above applies only if students have no incomplete grades and a cumulative GPA above 2.00. Courses taken on a Pass/Repeat basis are not considered among the 12 credit hours.

Upon graduation, degrees are awarded with Honors, Distinction, and High Distinction according to the below:

| <i>Undergraduate Academic Recognition</i> |                    |                             |
|-------------------------------------------|--------------------|-----------------------------|
| <b>GPA</b>                                | <b>Grade / 100</b> | <b>Academic Recognition</b> |
| 3.67-3.99                                 | 87 – 89            | Honors                      |
| 4.00                                      | 90 – 92            | Distinction                 |
| 4.00                                      | 93 and above       | High Distinction            |

## Graduate

For Graduate students and upon graduation, degrees are awarded with Honors, Distinction, and High Distinction according to the below:

| <i>Graduate Academic Recognition</i> |                    |                             |
|--------------------------------------|--------------------|-----------------------------|
| <b>GPA</b>                           | <b>Grade / 100</b> | <b>Academic Recognition</b> |
| 4.00                                 | 90 – 92            | Honors                      |
| 4.00                                 | 93 – 95            | Distinction                 |
| 4.00                                 | 96 and above       | High Distinction            |

### E2.2 Academic Probation

Students are placed on academic probation when their work has dropped below a satisfactory level, at any time, irrespective of incomplete grades or withdrawals.

A student is in academic probation if the student's cumulative GPA is:

- Less than 2.0 (70/100) for a student registered in a Bachelor Degree, a Bachelor of Engineering or a Diploma of Agricultural Engineering, excluding Summer Session.
- Less than 3.0 (80/100) for a student registered in a Bachelor of Science in Health Fundamental Sciences (Faculty of Medicine and Medical Sciences) or for a graduate student, excluding Summer Session.

During the Summer Session, the student in a probation situation has the right to register only in the failed courses.

Students taking intensive English courses are not subject to the normal probation rules. However, students may not stay in intensive English courses more than a total of two regular semesters and one summer, after which they must leave the university. They can come back only after passing the EEE or TOEFL.

A student on probation is advised to repeat courses in which he/she received a grade of F or less than D, as soon as possible, and may not carry more than 13 credits in a semester.

### E2.3 Disciplinary Probation

A student may be placed on disciplinary probation upon decision of the Council of Discipline.

### E2.4 Academic Suspension/Exclusion

A student is excluded from the program he/she is registered in for one of the following reasons:

- **School of Medicine and Medical Sciences:** A student is definitively excluded from the School of Medicine and Medical Sciences when he/she receives the second consecutive probation warning, except for Summer sessions.
- **Other Schools/Faculties:** A student is excluded from the department when he/she receives the third consecutive probation warning, except for Summer sessions in Undergraduate studies and the second consecutive probation in Graduate studies;
- If he/she fails to validate his/her academic program within the established time limit;
- If he/she fails a required course three times in Undergraduate programs and twice in Graduate programs;
- If he/she fails a remedial course two times in undergraduate programs and once in Graduate programs;
- If he/she fails/obtains the grade FW on all the courses during a semester following a non-official suspension of studies;
- If he/she suspends his/her education without officially informing the administration, by submitting the appropriate form to the Registrar Office.

A student who is excluded from the academic program can submit a change of program request to another program offered by USEK. However, the grade of his/her exclusion will still appear on his/her academic file. An administrative measure of temporary suspension can be taken by the University President.

### **E2.5 Administrative Suspension/Exclusion**

An administrative measure of temporary suspension can be taken by the University President.

A student can be excluded from USEK, based on an administrative decision of the University President or the University Council of Discipline. The decision will define the nature of the exclusion and its implication on the academic level. The grade of a student's exclusion will appear on his/her academic file. The student will get the grade AW (Administrative Withdraw).

## **E5. Rules for Final Examinations**

Students are expected to take final exams at the times scheduled on the Academic Calendar. Students will need their Student Card to enter the examination room and will have to sign a register of attendance.

Any cheating, or attempt to cheat, during the examination will inevitably lead to the annulment of the student's exam. The concerned student will not be entitled to a make-up exam (or for a second session for Law students). The proctor has the right to withdraw his/her copy and to ask him/her to leave before informing the Administration immediately. Additional measures can also be taken by the University Council of Discipline. A student who does not show up for the exam or jury, for any reason, is given, by the teacher, the failing grade of **zero** or R/RR. If this absence is due to special justifiable circumstances, such as:

- Death of a family member or relative;
- Hospitalization, attested by a medical report from the hospital;
- Tested positive to COVID-19, attested by a PCR test with a QR code;
- Serious accident, attested by an official report from a sworn expert;

then the student can present a petition with supporting documents at the Student Affairs Office.

Law students, having benefitted from a make-up examination, cannot benefit from the 2<sup>nd</sup> session.

Such, free of charge, petitions must be presented to the Student Affairs Office within 24 hours after the missed exam. The request will be ignored in the case of a recurrence and a student who has showed up for the exam cannot, in any case, present a petition.

Midterm examinations will be organized during the semester for the concerned schools/faculties. The aforementioned rules for the final examinations also apply to the midterms.

## **E6. Request to Review a Grade**

The student has the right to ask, within the deadlines set on the Academic Calendar, for his/her course final grade to be re-examined by submitting an online request or at the Registrar Office. After this period, no recourse, even a justified one, is possible.

A student can ask for the re-examination of two grades, at the most, per semester or Summer session. If the request is approved, the student will check the modified grade on his/her Banner account. If the request is rejected, the process fees will be automatically charged to the student's account.

The only acceptable requests for a grade review are as follows:

- In case a mistake occurred while adding up the grade;
- In case a mistake occurred while copying the grade.

The concerned teacher will write down his/her decision on the change of grade e-form, if necessary. After that, the e-form successively reaches to the Head of Department and the Associate Dean, in order to give their approval. In case of conflict, the request is submitted to the Faculty/Institute Council which will take the final decision. It is eventually submitted to the Registrar Office for processing.

## F. Program and Campus Related Rules and Regulations

### F1. Change of Academic Undergraduate Major or Emphasis

A student wishing to request a change of major or emphasis during his/her studies should submit a request at the Registrar Office according to the deadline set on the Academic Calendar. Any change of major or emphasis enters into force in the following semester according to the existing Catalog Year.

For changing major, the admission conditions related to the new major must be respected or else switching programs will be refused. The approval of the hosting Academic unit is required, according to the student's admission test results and his/her academic journey, is required.

A change of program to another section (French or English) is conditioned by: -Having the required language proficiency level of the requested section-Having validated at least 80% of the courses in the requested language-Not having failed a language remedial course of the current section.

A change to Engineering programs excluding Agricultural and Food Engineering is conditioned by the validation of a minimum of 30 credits and a GPA greater or equal to 80 (Required by the school).

A change of program to the faculty of Medicine and Medical Sciences is conditioned by having university level in the French and English languages or by taking the USEK French or English placement test (section B3.3 - Languages Remedial Courses rules and conditions apply).

Students have the right to switch major or emphasis once.

The credits of the initial major, related to common and equivalent courses, are validated by the new chosen major.

After changing the major, the average taken into consideration to determine the student's academic status (probation, obtaining the diploma/degree, etc.) is the overall Grade Average. The entire academic record of the student is displayed on the student's transcript.

The academic status of a student is calculated according to the number of credits validated by the new programs major and will be taken into consideration for the period during which the diploma/degree is being obtained.

### F2. Declaration of Double Major

To declare a double major, students in good academic standing should submit a request at the Registrar Office. The request requires the approval of the Head of the department offering the primary major and the approval of the Head of the department offering the second major.

Students must meet minimal course and grade requirements, as determined by the Head of the department offering the second major, or have to go through the required admission procedure (when needed) in order to be accepted into the desired major.

A student can enroll in a double major under the condition of not having to validate any remedial course. He/she must define the priority program and the secondary program.

Within a program, the student can apply for another program that will be considered as secondary, in case he/she validated all the needed remedial courses. Therefore, he/she will have to pass the admission test of the new program.

Double majors have to include more than 50% of dissimilarity in the number of credits with the exception of the double major; Bachelor of Arts in Theology, Philosophy and Liturgy.

A student in a probation situation in his/her priority program cannot apply, simultaneously, to another program.

***N.B.:*** *Medicine, Architecture, Engineering, Agricultural Sciences and Law programs cannot be secondary programs.*

### F3. Declaration of Double Degree

To declare a double degree, students in good academic standing should submit a request at the Registrar Office after completing 30 credits in the first declared major. The request requires the approval of

the Head of the department offering the primary major and the approval of the Head of the department offering the second degree.

Students must meet minimal major course and grade requirements, as determined by the Head of the department offering the second degree, or have to go through the required admission procedure (when needed) in order to be accepted into the desired program.

#### **F4. Declaration of Academic Minor**

To declare a minor, students should submit a request at the Registrar Office or online upon completing a **minimum of 30 credits and a maximum of 65 credits** of major study

The request requires the approval of the Head of the department offering the primary major and the approval of the Head of the department offering the minor. However, no student can declare a minor in his/her first year of study and in the same discipline of his/her major.

Students must meet minimal course and grade requirements, as determined by the Head of the department offering the minor, to be accepted into the desired minor.

#### **F5. Change of Campus**

The student who wishes to change his/her campus, without changing his/her academic program, should submit a request at the Registrar Office, located in the University Kaslik campus, by the end of the 13<sup>th</sup> week of the semester at the latest. This procedure must be followed in order to switch from a Regional University Center to the Kaslik campus or vice versa.

Students already registered in one of the three Regional University Centers who benefit from a 20% reduction on their tuition fees, will not benefit from this grant, once registered in the Kaslik campus. However, students already registered in the Kaslik campus will be able to benefit from the 20% grant, when switching to one of the three Regional University Centers.

#### **F6. Interruption of Studies and Re-admission**

A student who wishes to temporarily suspend his/her studies must submit a request to the Registrar Office. During the interruption of studies, the concerned student is considered as an “inactive student”.

Students who interrupted their studies for less than two years and are willing to pursue again their curriculum at USEK are granted automatic re-admission to their major, after the submission of a Readmission request, as long as the interruption is not due to academic probation or disciplinary exclusion.

Students who interrupted their studies for more than two years and are willing to pursue again their curriculum at USEK, shall submit a re-admission request to the Registrar Office. The previously earned courses will be subject to re-assessment, in alignment with the University Catalog, by the concerned department.

Students who interrupted their studies and earned credits in another Higher Education Institution during the interruption period may submit a request for credits transfer to the Registrar Office, in accordance with the rules and regulations of Admission on File Transfer.

***N.B.:*** An Interruption of studies can only be granted to a student once during his/her university curriculum.

### **G. Graduation Requirements**

#### **G1. General Graduation Requirements**

The graduation requirements for degrees offered vary between the levels of Undergraduate and Graduate studies, in addition to specific criteria related to the type of degree granted within the same level.

The graduation criteria for the Undergraduate students include reaching the required number of credits, fulfilling the minimum and maximum duration of studies that vary from 3 years (excluding Freshman year) to 7 years, passing all the required courses, fulfilling all the General Education requirements, having a total grade average not less than 70/100 (75/100 for the Engineering programs excluding Agricultural) and not being in probation.

The graduation criteria for Graduate students include reaching the required number of credits, fulfilling the minimum and maximum duration of studies that vary from 2 semesters (1 year) to 8 semesters (4 years), passing all the required courses, drafting and defending his/her thesis, having a total grade average not less than 80/100 and not being in probation.

For Transfer students, the total amount of external credits added to the credits transferred upon the student's admission, shall not exceed 49 % of the total required credits. The courses attended in Lebanon, even though in another university, should not be taught within the student's original Academic unit during the semester in question.

The program requirements for all degrees are described in the University Catalog.

## **G2. Duration of Studies and Courses Validation**

The recommended durations of study (excluding Freshman year), specified in the educational contract of each academic program, are defined for the Undergraduate degrees as follows:

- **Bachelor Degree:** between 3 years and 5 years, consecutive.
- **BA in Theology:** between 5 years and 7 years, consecutive.
- **Bachelor of Engineering:** between 5 years and 7 years, consecutive.
- **Engineering Diploma in Agricultural Engineering:** between 5 years and 7 years, consecutive.
- **Bachelor in Health Fundamental Sciences:** between 3 years and 4 years, consecutive.
- **Master:** between 2 years and 4 years, consecutive.
- **Diploma in Interpretation:** between 2 years and 4 years, consecutive.
- **Doctor of Medicine M.D.:** between 4 years and 6 years, consecutive.

## **G3. Issuing Degrees**

To certify that a student has succeeded in a program, USEK delivers 1 diploma/degree on parchment. The parchment is labeled in both Arabic and English languages.

However, fees, which are available on the University website, are required for each certified document from the related authorities. Therefore, a student has to pay these fees at the Students Accounting Desk for every request for an official document (and/or a true copy):

Official registration certificate (in English, French and/or Arabic).

Official diploma certificate (in English, French and/or Arabic).

Official academic transcript (delivered in English only).

N.B. Students enrolled in accredited programs at USEK shall receive an additional certification from the accrediting organization upon graduation.

## **G4. Graduation Procedure**

At the end of each semester, the University proceeds with the graduation of the final year students who have met the degree requirements.

However, students have the right to postpone their graduation in case they were willing to increase their GPA or finalize a Minor. In order to do so, students should submit a request at the Registrar Office to postpone the graduation procedure as soon as they receive the notification of the ongoing graduation process. The Academic unit to which students are affiliated should approve the suspension request.

## **G5. Procedure for Issuing Diplomas/Degrees**

In their diploma request (parchment, degree certificate, academic transcript) presented online or to the Registrar Office, students should make sure the personal data included in their file (name, surname, date and place of birth, etc.) is correct, and then, in case of error, proceed with the necessary corrections (especially uppercase, lowercase, accents, spaces). Students are required to submit legal documents justifying their modifications. If this is not the case, the parchment will be automatically printed and a financial penalty will be applied to any request for modification.

### **G5.1 Collection of a Diploma/Degree (Parchment) and Certificates**

Students should collect their degrees and certificates from the Registrar Office. They are required to collect in person, submit their national identity card and sign a special register.

A student who cannot collect these documents in person, for any reason, could delegate a representative, by completing the Letter of Authorization to Release Information or by sending an email to the Registrar official email address [registrar@usek.edu.lb](mailto:registrar@usek.edu.lb).

National and international mailing services are ensured, in case of need, through the Registrar Office.

USEK reserves the right not to deliver a student's degree and certificates if he/she is in any irregular situation with the Library and/or the Financial Administration.

### **G5.2 Diploma Replacement Request (Duplicate)**

Graduates who have misplaced, lost or damaged their original diploma may request a replacement one, in person only, by completing the Replacement Diploma form available at the Registrar Office.

If the diploma is lost, the graduate requesting the duplicate must certify on the Replacement Diploma Form that this duplicate will be returned when the original is found. In case the original diploma is damaged, evidence must be provided. The new diploma will be issued with the same date as the original diploma.

The newly issued diploma will include the wording "Duplicata" stating that the document is a replacement of the originally issued one.

The diploma replacement fee is payable by cash (in person only), by check made payable by MasterCard, or Visa.

The replacement diploma will include the signature of the incumbent concerned authorities.

If the graduated student wishes that the replacement diploma displays his/her name in a different spelling than the one mentioned on his/her original diploma or the one in his/her records, he/she must submit a Personal Information Correction Form along with the Replacement Diploma Form. The Personal Information Correction Form must be accompanied by the official documentation of his/her new legal name (court order, passport or Lebanese ID).

A new parchment may be issued when any typo mistake except those related to the graduate's personal information is found in the original diploma. The new parchment will be handed over to the concerned person, in exchange for the originally issued one without any additional fees.

## **G6. Initiation of Procedures and Official Documents Withdrawal**

The student or any person can initiate a request at the Registrar Office or send an email to submit a request. Once the document is ready, the student will receive an email and SMS and the document fee must be settled at the Students Accounting Desk. The student may, if he/she wishes, delegate a third party to retrieve the requested documents. He/she will then mandate officially the Registrar Office by a signed letter or by sending an email to [registrar@usek.edu.lb](mailto:registrar@usek.edu.lb)

N.B:

- All requested official documents will remain available at the Office of the Registrar till the end of the ongoing term. Subsequently to the said, all uncollected documents will be disposed of and if unsettled, the fees will be charged to the designated student's account balance (current students only).
- All outstanding amount should be settled prior requesting any official document.

## **H. Student Responsibility and Ethical Conduct**

### **H1. Positive Participation**

Positive participation is required for courses, practical activities, directed activities, laboratory sessions, etc.

Absent students are held responsible for the work done and/or announcements made during the skipped session of a course.

Students who exceed the allowed number of absences must withdraw from the course; otherwise, the course grade will be assigned as FW or R or RR depending on the type of the course.

A student who does not show up to all his/her courses for more than three consecutive weeks will be considered by the administration as having resigned; he/she will be given the grade FW (Fail to Withdraw) in all his/her courses and will be consequently excluded from his/her academic program at the end of the semester. However, the student can present a readmission demand to the Academic unit in order to continue his/her education, starting from the following semester (a readmission form must be presented to the Registrar Office). The Dean of the Academic unit gives his/her opinion; however, the readmission request can be refused by the Admission and Transfer Committee.

If the student justifies the exceptional circumstances of his/her absence to all the courses for three consecutive weeks, he/she can apply for an Administrative Withdraw by presenting the appropriate form to the Registrar Office.

## **H2. Academic Integrity**

Academic integrity is at the core of University learning and is compromised by plagiarism and fraud.

### **H2.1 Plagiarism**

Plagiarism consists of someone pretending that other people's ideas and statements are his/her own. For example, plagiarism cases comprise:

- Copying texts or parcels of texts without indicating they are borrowings and without citing their source;
- Omitting to cite the source of a paraphrased or summarized text.

### **H2.2 Fraud**

Fraud cases include for example the following situations:

- To present, under one's own name, a text partially or entirely prepared by someone else;
- To borrow, buy, sell or lend a text that is to be presented for a course;
- To submit the same text in more than one course;
- To receive or give help or information from, or to, another student during a test or an exam;
- To use unauthorized material during a test or an exam;
- To present, during a test and under one's own name, a text partially or entirely prepared by someone else;
- To submit false information in a work or a report;
- To obtain the questions of a test or exam in an unauthorized way;
- To pretend to be someone else during a test or an exam or let someone else do the test or the exam.

A student who commits plagiarism or fraud will be given the grade FW on the plagiarized work or the exam during which the fraud was committed. The teacher must report this fraud to the Dean/Director, who will have to evaluate its gravity before deciding whether he/she wants to submit the case or not to the University President; the latter will therefore be able to refer the case to the Council of Discipline.

## **H3. On Campus Code of Ethics**

This Code of Conduct on Campus of the Holy Spirit University of Kaslik is the complement of institutional and academic rules defined by the statutes and regulations in force at USEK. It determines the main rules, which are to be observed by all on the campuses of the University, in order to generate and maintain a common life of respect, and to create an amenable atmosphere conducive to studying. It defines certain necessary limits and imposes certain duties and obligations.

USEK students on campus are required to comply with all instructions, established by this Code of Conduct.

### **H3.1 Political Activities**

Political student elections are definitely forbidden at USEK. In order to get permission for the below, within the different campuses of the University, prior written consent of the Vice President for Community Life, in response to an explicit prior written request, is needed:

- Public political debates
- Political meetings

- Billposting of political posters or posters related to a political party
- Distribution of political leaflets or leaflets related to a political party

### **H3.2 Use of the University Name, Its Acronym and Its Logo**

The University name, used in any language, as well as its acronym "USEK" and its logo are the intellectual property of the University and are registered trademarks, protected by law. Any complete or partial use of the University name, its acronym or its logo requires a prior written authorization from the Vice President for Community Life, under penalty of sanction.

### **H3.3 Billpostings and Leaflet Distribution**

Distributing or billposting leaflets, notices and press releases by the members of the University community, within the various USEK campuses, is subject to the prior consent of the Student Affairs Office (or the administration for the University Regional Centers) and must not disturb the flow of teaching, research and administration activities.

Any distributed or displayed document must include the signature of its author and the seal of the Student Affairs Office (or the administration for the Regional University Centers), which represents its approval of the distribution or billposting. The author of any distributed or posted document, within USEK, remains the only person in charge of its content and/or ideas.

Document distribution or billposting by any foreign person must be subject to a prior authorization from the Vice President for Community Life (or the Director of the Regional University Center). Outside of the designated posting areas, any billposting, whatever its nature, is forbidden and can bring penalties against its author.

### **H3.4 Security and Hygiene**

Members of the University community and any duly authorized persons can access the USEK campus. The Security personnel at the campus access zones are entitled to request, for precautionary measures, that all vehicles as well as individual bags are searched. Students are required to show their student identification cards to the security personnel, in order to access the campus.

The collective premises and equipment of the University are placed at the disposal of the students, within the limits of availability and office hours. However, users cannot access them unless under the supervision of an administrative or educational official, who is clearly appointed in accordance with the regulations in force. Users are required to be familiar with the security regulations and rules, which are posted within the premises.

Documents and devices, placed at the disposal of the students, must not be taken out of the University premises (specific rules apply to the Library, in this regard).

It is strictly forbidden to smoke on the premises, introduce substances harmful to health and public order, and consume alcohol within the University.

### **H3.5 Found Objects**

The members of the University community, motivated by a spirit of solidarity and responsibility, are required to hand in found objects to the Student Affairs Office (or to the administration for the Regional University Centers). Moreover, in case of a loss, the Student Affairs Office should receive the depositions of the concerned persons. USEK cannot be held responsible for the loss or theft of an object belonging to a person within the campus.

In the case of a suspicious object, it is recommended that it should not be moved; University security agents should be informed as soon as possible.

### **H3.6 Behavior and Dress**

Any damage caused to the premises and equipment of the University, as well as to private property belonging to a third party, thefts or theft attempts and verbal or physical violence within USEK, constitute behavior, which according to its severity, can result in an appearance of the author(s) before the University Council of Discipline.

The use of mobile phones is forbidden during courses, practical work, examinations and laboratory sessions, etc.

A suitable and decent dress is required within the University. Political signs worn ostentatiously or intended to trigger protests, are not allowed, be it of clothing or any other type.

#### **H4. Appeal Procedure in the Application of Academic Regulations and Petitions**

The student who considers that he/she was wrongly accused, or his/her request has not been executed within the regular course of the university bylaws, can appeal against the decision taken on his/her behalf.

In order to do so, the student must refer to the Student Affairs Office in order to write a petition.

The student will have to submit his/her petition at latest three days after the release of the official notification of the contested decision. This petition is submitted free of charge.

The application of every appeal outcome is suspended until it is confirmed by the Student Affairs Office (SAO) which will communicate the relevant decision, by email to the student's USEK email, generally, within seven working days after receiving the petition. The SAO' decision for special cases is reviewed by the Deputy President for Students and thus is final and binding.

## Appendix 1. Practical Information for Students

### 1. USEK Student Card

This card identifies students registered at USEK. Therefore, they should always carry it with them, as it is necessary to access the University campus, classrooms, Library, examinations, conferences, sports center, etc. Students should collect their card from the Registrar Office, after the registration period. While waiting for his/her card to access the campus, classrooms, Library, etc., the student should show his/her registration form.

**Duplicate:** In case of loss of the card, a duplicate can be made by the Registrar Office and the student should participate in the reproduction cost fixed by the University and indicated on the University website.

**Validity:** After graduation, the USEK Student Card remains valid. Alumni will be able to access the campus by showing their ID cards on all USEK gates.

### 2. USEK E-mail Account

Every student is issued with a unique USEK e-mail account which is the official means of communication between the University administration, faculty members and students.

Once the registration is completed, an USEK e-mail account will be created automatically as follows:

**FName.InitialOfFather'sName.LName@net.usek.edu.lb**

**N.B:** For security reasons, students should change their default password.

Access to the email account is made available through connecting to "Webmail" which link is available on the University Intranet *MyUSEK* or through the USEK website. In case of problems or for further information, students can refer to the IT Service Desk.

### 3. Access to Banner Self-service

All students enrolled at USEK automatically benefit from access to the University Student Information System, the Banner Self-Service, which allows students to pre-register/register online, consult their academic transcripts, course catalog, course offering) as well as the financial account summaries.

The username used to access Banner Self-Service is the Student ID and the Pin code, the same password used to login to USEK e-mail.

Access to the Banner Self-service is made available through connecting to "Banner" which link is available on the University Intranet *MyUSEK* or through the USEK website. In case of problems or for further information, students can refer to the IT Service Desk.

### 4. MyDegree

USEK students enrolled starting Fall 2017(201810) can benefit from MyDegree, the Student Advising and Degree Audit platform. MyDegree is a comprehensive solution, powered by Ellucian Degree Works that helps students and their advisors to successfully negotiate the curriculum and graduation requirements.

MyDegree is accessible from any browser by entering: [mydegree.usek.edu.lb](http://mydegree.usek.edu.lb) or through the MyDegree link on the University website and Intranet *MyUSEK*. A student can log in using the same username and password as their USEK email.

### 5. Moodle E-Learning Platform

All USEK students automatically benefit from access to the Moodle E-Learning Platform adopted by the University to allow them to follow their courses in an interactive manner, rich in resources (posters, books, links, URLs, etc.), and activities (homework, forum, chat, tests, etc.).

The student can access the Moodle E-Learning Platform by clicking on the link in the University Intranet *MyUsek* and website, using his/her USEK account.

A user's guide can be accessed through the *e-learning* link on the University website and Intranet *MyUsek*.

### 6. Mahara E-Portfolio Platform

USEK adopted the e-Portfolio platform to help students, and also teachers and staff, in the process of creating a dynamic and engaging digital portfolio where evidence will be held of their professional achievements and developments, personal and educational.

## 7. Parking Information

USEK student parking lots are free of charge and accessible to all currently enrolled students.

Opening hours: Monday till Friday, from 7:00 am till 10:30 pm.

The student parking lots can be accessed using the student's active ID card.

Students are not allowed to park longer than the specified opening hours without the proper authorization. Doing so, the student will lose his access privileges to the parking for a definite period of time.

In order to access the parking (entry and exit), the student should use only his/her student ID card. Trying to enter or exit the parking using another student ID card, the student will lose his access privileges to the parking for a definite period of time.

For safety reasons, cars will be searched.

Students are invited to properly park in the designated parking spots.

Students parked in the parking lots are required to comply with the parking regulations and Code of Conduct displayed at the entrance of the parking.

Not abiding by the parking rules and regulations may lead to a permanent loss of entry to the parking lots.

The University will not be responsible for any theft or damage to vehicles parked in the parking lots.

Students can refer, at any time, to the Director of Campus Safety and Security to inquire more about the parking and its regulations.

USEK reserves the right to change the parking policy at any given time and without prior notification.

## 8. USEK Counseling Center

The USEK Counseling Center (UCC) is dedicated to all the students of the Holy Spirit University of KASLIK, whether on campus or in Regional University Centers. It provides many services, including crisis intervention and orientation, short-term counseling, workshops, and psychoeducational programs such as raising awareness and prevention.

UCC's mission is to provide confidential, ethical, innovative and high-quality care that addresses the developmental, relational and emotional concerns of students. The main focus is to help our students through personal transitions and adjustments associated with university life.

## 9. USEK, Attentive to its Students' Comments

Within the framework of the development of teaching and learning process and administrative services, the Holy Spirit University of Kaslik encourages its students to share their suggestions or complaints and to participate in evaluations.

All students can send us their suggestions or complaints regarding the administrative functioning of the University as well as the quality of the provided services at the Student Affairs Office or by writing to [administration@usek.edu.lb](mailto:administration@usek.edu.lb)

## 10. An Evaluation System Available for Students

Students are required to fill, on the BLUE evaluation system adopted by USEK, the evaluation of each course they have completed during a semester. They cannot access their final grade without filling this evaluation.

This evaluation revolves around the following criteria, using a scale from 1 to 4:

- General evaluation of the course
- Teaching organization by the teacher
- Educational abilities of the teacher
- Evaluation of the learning method adopted by the teacher
- General opinion of the course and the teaching method

***N.B.:*** This evaluation is strictly anonymous and confidential.

Students are also required to fill the BLUE evaluation "On-Campus Well-Being" at the end of each semester. This evaluation revolves around the administrative services provided by the University: student life, student services, library, restaurant, communication and telecommunication, etc.

Finally, all final year students having fulfilled the requirements to obtain their diploma are required to fill the "Graduation Survey" evaluation when they launch their diploma/degree request at the Registrar Office.

## **Article 1: Introduction**

The purpose of these regulations is to define the structure, the conditions pertaining to the organization, the preparation, and the completion of PhD degrees at USEK.

## **Article 2: Council of Doctoral College (CDC)**

§1. A Council of Doctoral College (CDC) is established within USEK and is responsible for the coordination of doctoral studies, and the follow up on PhD students' learning and research experience within different Schools/faculty.

§2. The CDC is composed of the dean of the Doctoral College as chair, associate deans of the Doctoral College (Office of Doctoral College), and schools/faculty doctoral studies coordinators. The dean of College is appointed by the president from among the full-time faculty members holding the academic rank of professor.

The council meets a minimum of two times a year upon the request of the dean of the College. A quorum of 2/3 of the members is required to hold the council meeting.

§3. The CDC is in charge of:

- suggesting general doctoral studies regulations according to USEK academic and research strategic directions as well as the admission criteria.
- ensuring and endorsing the display of the PhD Thesis Proposals (PTP) of schools/faculty on the website of the University.
- approving the admission/re-admission of applicants according to USEK academic and research strategic directions.
- ensuring the implementation and respect of the doctoral studies regulations, outlining the procedures relating to the preparation and defense of a PhD thesis and propose amendments, if necessary.
- organizing and promoting doctoral studies as well as ensuring their quality.
- promoting intra- and inter-university cooperation.
- encouraging knowledge transfer and entrepreneurship.
- overseeing the progress work of PhD programs.
- assisting the PhD students to take hold of any calls for doctoral scholarship and research grants.

§4. The decisions of the CDC are taken by the absolute majority of the present members. In case of parity, the dean of the Doctoral College has the casting vote.

§5. The school/faculty doctoral studies coordinator is in charge of:

- collecting the PhD Thesis Proposals Forms (PTPF) issued by the school/faculty researchers and endorsing them according to the availability of full-time faculty, the school/faculty resources and research planning.
- preparing, in accordance with the general admission requirements, the assessment tools to evaluate the ability of the applicant to pursue doctoral studies.

- proposing, in collaboration with the PhD supervisor(s), the Doctoral Advisory Committee (DAC) to assess the PhD applicant's admission in accordance with functions stipulated in article 3.
- preparing the comprehensive exams<sup>1</sup>.
- encouraging and guiding PhD students to participate in peer-reviewed conferences and symposiums according to institutional policies and procedures.

#### §6. Doctoral Advisory Committee:

- For each PhD Thesis Proposal, a DAC (Doctoral Advisory Committee) is proposed by the PhD supervisor, endorsed by school/faculty doctoral studies coordinator, and approved by the dean of the school/faculty. The DAC is composed obligatorily of:
  - *PhD thesis supervisor(s) (joint supervision or co-supervision).*
  - *One or two experts with the appropriate skills for the assessment of the applicant in the required field.*
- For each PhD thesis proposal, it belongs to DAC to:
  - *study the PhD application and assess, depending on the profile sought, the applicant's ability to pursue doctoral studies in accordance with the admission requirements stipulated in article 3.*
  - *guide, along with the supervisor(s), the accepted PhD student throughout the doctoral program by broadening and deepening the range of expertise and experience available to the PhD Student.*

### Article 3: Admission to Doctoral Studies

PhD programs are designed for individuals who demonstrate the potential to perform original research under guidance, with a view to various careers, including those in research, industrial sector or initiating start-ups, and teaching.

§1. Eligibility: Candidates should hold a master's degree (or an equivalent diploma approved by the Commission of Equivalences in the Ministry of Education and Higher Education) in any of the disciplines approved by the program to which the candidate is applying and shall fulfill all eligibility requirements as defined by the program (Cf. Appendix 1).

§2. Application: An eligible applicant is considered for admission to the PhD program if s/he meets the following requirements validated by the Office of Doctoral College (ODC):

1. Applicant shall choose a PhD Thesis Proposal (PTP) option displayed on the USEK website or present his/her individual pre-approved PhD thesis proposal.
2. Applicant shall submit a complete application including:

---

<sup>1</sup> The comprehensive assessment, Comps, comprises the applicant's file review followed by an oral assessment to evaluate the candidate's scientific and communicative skills; **additional admission requirements may be specified by the program.** The candidate will sit for comps before the Doctoral Advisory Committee.

- A motivation letter (400-500 words) indicating the purpose for pursuing doctoral study in the particular field at USEK and specifying the applicant's research interests and/or practical experience in the field.
- Two letters of recommendations issued by faculty members who are not prospective supervisor.
- Transcripts of academic record from all the institutions attended.
- A portfolio that includes, but not limited to, a resume or curriculum vitae and evidence of research activities.

An incomplete application, or a late submission, will lead to rejection.

§3. Admission: the candidate's application is evaluated by the Doctoral Advisory Committee (DAC) of the chosen PTP. To be admitted, the applicant shall pass the comprehensive assessment to evaluate her/his potential to pursue doctoral studies and to complete a PhD thesis. The comprehensive assessment comprises the applicant's file review followed by an oral assessment to evaluate the candidate's scientific and communicative skills; additional admission requirements may be specified by the program.

§4. Satisfaction of the minimum admission requirements does not guarantee admission.

§5. All application forms and admission results shall be endorsed by the school/faculty doctoral studies coordinator and approved by the dean of the school/faculty.

§6. The school/faculty's appraised admission results will be submitted to the dean of Doctoral College for endorsement by the ODS, who will issue the final admissions' reports.

#### **Article 4: Registration**

§1. Each applicant, admitted to a doctoral program, shall register within one semester following her/his admission, if the applicant does not register within the established deadlines, she/he shall reapply for admission.

§2. Following a positive Doctoral Year Review (DYRF)<sup>2</sup> of PhD Student, the registration shall be renewed every semester till graduation, in accordance with functions stipulated in article 10. The PhD supervisor(s) shall fill out the Doctoral Year Review Form (DYRF) every 12 months starting from the first registration of the PhD student. The DYRF shall be signed by the supervisor(s) and PhD student and submitted to the Office of Doctoral College.

#### **Article 5: PhD Thesis Supervisor(s)**

§1. The thesis supervisor is among the full-time faculty members, and shall hold, at least, the academic rank of associate professor. The thesis supervisor must take overall responsibility for the supervision of the PhD Student in accordance with functions stipulated in PhD *Thesis*

---

<sup>2</sup> A DYRF must be filled and signed by the PhD supervisor (s) and his/her student every 12 months starting from the first registration of the PhD Student

*Charter* (Article 8). A faculty cannot supervise more than four theses in parallel, unless otherwise previously authorized by the dean of school/faculty.

In the case of joint supervision, both supervisors must take overall responsibility for the supervision of the PhD Student. The co-supervisor may be selected from outside USEK; she/he should hold, at least, the academic rank of assistant professor.

§2. In the event of a change/addition to the subject directions and/or DAC members including the supervisors and co-supervisors, the PhD student shall fill the requested form to change, with the consent of his/her PhD supervisor, which shall be endorsed by the concerned CDC members and approved by the dean of the Doctoral College.

### **Article 6: Interruption of Study**

§1. A PhD student has the right to interrupt her/his studies once, and interruption may only be granted for one semester, subject to a valid justification supported by evidence and provided by the student. Interruption form must be endorsed by the supervisor (s), the school/faculty Doctoral Studies Coordinator, approved by the dean of school/faculty and the dean of the Doctoral College.

§2. Upon the end of the interrupted term, s/he shall fill out a readmission form. If s/he is absent for more than one semester, she/he will be excluded from the program. In order to be readmitted, the registration of the PhD student will require an admission procedure (not a readmission procedure).

§3. If a PhD student is in receipt of a scholarship, it is her/his responsibility as well as that of his/her PhD supervisor (s) to notify the sponsor of her/his interruption to her/his studies.

§4. PhD students have the right to suspend their studies in case of maternity or certified illness.

### **Article 7: Exclusion and Withdrawal from Doctoral Studies**

§1. The dean of Doctoral College shall advise to exclude a PhD student from the doctoral program whose progress in the work is deemed unsatisfactory, following a negative Doctoral Year Review (DYRF). The exclusion shall be endorsed by the dean of school/faculty, the dean of Doctoral College and approved by the provost.

§2. PhD student may withdraw from her/his doctoral program at any time, by filling out the Withdrawal Form (WF). In such a case, no readmissions are allowed, and all future admissions will be subjected to Article 3.

§3. A PhD student whose absence exceeds one semester, without an official and approved interruption (refer to article 6), will be automatically excluded from his/her doctoral program.

§4. In case of exclusion or withdrawal from a doctoral program, the University retains ownership of the results and rights to use the intellectual property.

### Article 8: PhD Thesis Charter

The PhD supervisor (s) and the PhD student respectively have rights and duties with regard to high achievement levels. Their respective responsibilities are explained in detail in a thesis charter outlined by the Council of Doctoral College in line with the prevailing University regulations and research policy. When registering for the first year of a doctoral program, the PhD student signs the *PhD Thesis Charter* (Appendix 2) along with the PhD supervisor(s), in compliance with the University regulations and research policy including the USEK Code of Ethics and Research Code of Conduct.

### Article 9: Appeal

Until the nomination of the jury, the PhD student can appeal against an assessment, thesis progression or exclusion decision in accordance with functions stipulated in *PhD Thesis Charter* (Article 8, Appendix 2).

### Article 10: Doctoral Studies Program

§1. USEK doctoral studies curriculum framework must enable the PhD student to develop her/his knowledge and skills. It is composed of a minimum of 60 credits divided as follows:

| Doctoral Program                                                                   | Number of credits |
|------------------------------------------------------------------------------------|-------------------|
| Thematic Courses managed by schools/faculty                                        | 9                 |
| Common courses dealing in general with multidisciplinary themes managed by the CDC | 6                 |
| Qualifying Seminar <sup>3</sup>                                                    | 0                 |
| Thesis and defense (including scientific activities and publications)              | 45 Crs            |

§2. The minimum duration to achieve the doctoral studies is six semesters, as from initial registration. A term-based extension, prorogation of maximum four consecutive semesters, even if the student changes her/his research topic, may be granted by the dean of the Doctoral College following a favorable Doctoral Year Review.

### Article 11: PhD Thesis Evaluation

§1. Before submitting the PhD thesis for evaluation, the PhD student must complete all program and research requirements including the doctoral courses, scientific activities, and the publication of papers in refereed journals.

The PhD student must write the PhD thesis and submit the full manuscript to the PhD Supervisor(s) in accordance with the PhD dissertation manual. The PhD student is responsible

---

<sup>3</sup> The qualifying seminar is to determine whether a student is ready to defend his/her thesis by attending webinars, seminars, conferences, meeting in synchronous or asynchronous learning modes. Only students in their fifth semester can register in this seminar.

to communicate with the USEK library for ensuring that the PhD thesis meets the required professional standards and format set by the University.

§2. PhD student must publish, as first author, two peer-reviewed scholarly outputs (two articles published or in press or accepted for publication) in refereed and indexed journals. It is to be noted that one of these two scholarly outputs could be published in peer-reviewed proceedings within the frame of international symposiums or a participation in national or international peer-reviewed conferences.

§3. Following the approval of the PhD supervisor (s), the PhD student must coordinate with the DAC to ensure that everyone agrees that the work is ready for evaluation; they decide on a date for the defense.

The PhD student and the supervisor(s) begin scheduling the defense date at least ten weeks before the expected date of defense to ensure that all jury members are able to be available on the date and time selected.

The PhD student must enroll in the term in which the PhD thesis is officially submitted for evaluation and in the term of the PhD defense.

§4. The PhD student must initiate the authorization procedure for PhD evaluation and defense authorization. The PhD supervisor(s) must certify, by submitting to the Office of Doctoral College the Thesis Evaluation and Defense Authorization Form (TEDAF), that they have examined the PhD thesis, the PhD student has completed all doctoral studies requirements, and it is ready to be sent to a jury for evaluation. The TEDAF shall be validated by the office of the Doctoral College.

After TEDAF validation, the list of Readers and Examiners for Evaluation of PhD Thesis Form (REEPF) must be initiated by the PhD supervisor(s) in accordance with the functions stipulated in Article 13, endorsed by the school/faculty doctoral studies coordinator, and approved by the dean of school/faculty eight weeks before the prospective date of defense.

## **Article 12: Jury Designation and Defense Authorization**

§1. A PhD thesis will not be considered officially receivable by the Office of the Doctoral College, for jury designation and defense authorization, until all the following steps have been submitted by the supervisor(s):

- the validated Thesis Evaluation and Defense Authorization Form (TEDAF) including (i) the yearly favorable Doctoral Year Review Forms (DYRF) duly completed and signed, (ii) validation of Credits, (iii) two peer-reviewed scholarly outputs (Cf. article 11 §2), (iv) the full manuscript of PhD thesis, (v) the Plagiarism Compliance Statement (PCS), and (vi) Turnitin report.
- the list of Readers and Examiners for Evaluation of PhD Thesis Form (REEPF) duly completed and signed, in accordance with the jury composition requirements stipulated in Articles 12 and 14.

§2. Following the approval of the dean of school/faculty of the Readers and Examiners for Evaluation of PhD Thesis Form (REEPF) , the PhD supervisor(s) shall send the PhD thesis to

jury members. The readers' reports (two reports are required) including all revisions and comments will be sent by the readers to the Office of Doctoral College, the PhD student, and the PhD supervisor(s) no later than four weeks before the approved defense date.

In case there are changes or corrections requested by readers, the PhD student and supervisor(s) are held responsible to provide readers with answers and all required corrections of the PhD thesis as well as to communicate to the Office of Doctoral College the written progress reports and/or the final reports received from both Readers.

§3. Following the positive evaluation of the readers, the dean of the Doctoral College authorizes the PhD defense, and a public notice will be posted in different schools/faculty at least 7 days in advance of the defense date.

### **Article 13: Composition of Jury**

A PhD thesis will be evaluated by two readers, and then defended in person, in front of a jury. The rules to follow when setting up panels for a PhD thesis defense in USEK, whether in the framework of an agreement without or with joint guardianship with a partner institution are:

#### §1. Jury composition:

- The jury must have at least 5 members, including two readers. Resumes, or CVs (with list of works and publications) must be attached to the request for designation of jury.
- The reader must be, at least, holder of the academic rank of associate professor or similar and not to have participated in the work of the thesis. They must be present at the defense of the thesis. At least one of the readers is chosen from an institution of higher education out of USEK, having a proven track record in the research field.
- at least one of jury members shall have the rank of professor.
- an examiner in a thesis jury at USEK shall be, at least, holder of the academic degree of associate professor or similar.
- at least two of jury members shall be from outside USEK including one of the readers.
- supervision cannot be majority or casting vote in the jury.
- invited members are not considered in the composition of the jury and do not take part in the deliberation.
- the chair of the jury is appointed at the thesis defense session, holder of the academic rank of Professor. She/He must be a faculty member from a higher education institution and physically present in the room where the defense is taking place. The reader may not be chosen as jury chair.
- The PhD thesis supervisor(s) and DAC member(s) may not be chosen as either reader for the thesis defense or jury chair.

#### §2. Jury in joint guardianship:

A PhD student in joint guardianship (cotutelle/codirection) shall be enrolled in the two signatory institutions of the agreement. It is, therefore, appropriate to conduct the procedures for the defense in both institutions jointly and refer, first, to the text of the joint agreement which should stipulate specific provisions.

#### **Article 14: Role of the Members of the Defense Jury**

The role of the jury members before, during and at the end of the defense is detailed in the *Jury Charter and Verdicts* (Appendix 3) for the defense of a doctoral thesis drawn up in accordance with the principles set out in this regulation.

#### **Article 15: PhD Thesis Defense**

The thesis defense, as well as the deliberation, cannot take place unless the jury members are present physically or remotely via videoconference. It consists of two parts: a presentation by the PhD Student of his/her research followed by a question-and-answer session with the members of the jury.

After the defense, the jury will meet behind the closed doors to discuss and then announce unanimously its decision to grant the PhD student a doctorate and shall indicate the verdict<sup>4</sup>.

§1. The Office of Doctoral College is in charge of the reservation of the venues and the announcement of the defense session to all members of the university.

§2. The PhD thesis is defended in public session, except with an exceptional derogation granted by the university president if the subject of the thesis is of a demonstrated confidential nature.

§3. The student must be physically present in the room where the thesis defense is taking place. However, videoconferencing is permitted if the candidate has limited mobility as a result of a certified medical condition.

§4. In case of videoconference, the supervisor (s) must arrange for the signature to be procured from the proxy and to ensure that the Proxy Signatures Form (PSF) is submitted to the Office of Doctoral College on time before the thesis defense.

§5. Thesis supervisor(s) participate in the defense but do not take part in the jury's decision.

#### **Article 16: PhD Thesis Defense: Deliberation and Verdicts**

Following the deliberation, the jury members shall fill and sign the Minutes of Thesis Deliberation. The chair of the jury writes the minutes of the thesis defense co-signed by all the jury members.

For those who are not physically present in the room where the defense session is taking place (videoconference); the jury chair shall serve as the proxy and sign his or her name followed by "*on behalf of - full name of jury member - in accordance with the proxy signature*".

---

<sup>4</sup> Cf. the Jury Charter and Verdicts

### **Article 17: Confidentiality Period on Thesis publication<sup>5</sup> and *Embargo***

§1. Confidentiality: PhD student and/or supervisor(s)<sup>6</sup> who are applying for patents, are including sensitive controlled material, have a contract on file or are including a non-disclosure agreement may request confidentiality of their PhD theses. Confidentiality can be requested for one or two years and PhD students and/or supervisor(s) who have contracts or agreements on file may request longer periods.

§2. An application for restricted access of a PhD thesis, *Embargo*, may be made by the PhD student and/or the supervisor(s) subject to the approval by the dean of the Doctoral College. Such requests will be considered only on the grounds:

- that the thesis contains confidential and/or sensitive material; or
- that the patent application needs time to be lodged and/or the commercialization process is pending; or
- that it was a condition imposed by the owner of private records and material used by the author; or
- that the PhD student and/or supervisor(s) was in contract relationship with a third party that made the restriction a condition of the contract; or
- that the thesis contains creative, critical, academic, or equivalent material with a required delay for publication, performance, or equivalents.
- that the publication of the thesis carries a significant risk of harm to individuals or Institution.

§3. A Confidentiality Request Form (CRF) must be completed, sent to, and approved by the dean of the Doctoral College before the student submits the final electronic version of the thesis to the USEK Library. The approval must be sought and granted not later than the time at which PhD defense arrangements are approved.

§4. Where an application for confidentiality has been granted, the thesis will be retained and secured in a vault inside USEK, with restricted access and will only be made available to those directly involved in the project.

§5. An embargo on thesis publication cannot be requested after the thesis has been submitted and approved in the workflow system.

### **Article 18: Final Submission of the PhD Thesis After a Successful Defense**

§1. When the PhD student has successfully defended the thesis and made any appropriate corrections, the PhD student must submit the final electronic version of the PhD thesis to USEK library institutional repository. Once the thesis is submitted it becomes freely available online.

§2. No student shall be recommended for graduation until an acceptable final version of the PhD thesis has been submitted.

---

<sup>5</sup> The Intellectual Property (IP) ownership is dealt with according to the USEK Intellectual Property Policy. The IP is divided into two categories, industrial property and copyright. The advice from the concerned CDC members should be sought if the PhD thesis involves any form of intellectual property.

### **Article 19: Plagiarism**

Plagiarism includes, but is not limited to, the use of another person's work (including words, ideas, designs, or data) without giving appropriate attribution or citation<sup>6</sup>.

Plagiarism is an unethical practice in scientific research where an author would borrow texts, graphical representations, concepts, or analyses of other researchers without giving proper credit. Instead, these authors would claim the credit of these ideas for their own in two ways. The first is by taking the actual ideas and saying it was the result of the work they have done. The second method is done by intentionally omitting the resources that these concepts were derived from.

The Holy Spirit University of Kaslik considers plagiarism as a serious breach of academic and professional standards<sup>7</sup> and a violation of the USEK Code of Ethics, Research, and Student Codes of Conduct. Any individual caught involved with plagiarism is subject to exclusion and/or annulment of their degree.

As such, the Holy Spirit University of Kaslik retains the right to investigate every submission be it a simple report or a doctorate thesis by using the appropriate software that allows the detection of plagiarism. Any individual submitting his/her doctorate thesis who is found guilty of plagiarism will have his/her submission deleted, and they will no longer be able to apply for a new topic at USEK.

### **Article 20: Implementation and Amendment**

§1. The Doctoral Studies Rules and Regulations shall enter into force on the date of their approval by the University Academic and Research Council.

§2. Amendment: the provisions of these articles may at any time be amended, supplemented, or repealed by the University Academic and Research Council.

### **Article 21: Rules Compliance**

§1. The provisions of the Doctoral Studies Rules and Regulations detailed in this document shall apply to USEK Students registered in a PhD Program

§2. Candidates seeking admission to USEK PhD programs and current students are required to comply with these rules and regulations as well as any future amendments, and also to abide by the rules, regulations, and procedures in force at USEK.

---

<sup>6</sup> Cf. USEK Student Code of Conduct/Article III/§a.3

<sup>7</sup> Cf. USEK Code of Ethics/Article II/§II.2

# General Education Requirements

Rooted in its institutional mission and its commitment to faith, welfare of the human being, human and spiritual values, and respect of cultural and religious pluralism, the General Education program at USEK reflect the values of its founder, the Lebanese Maronite Order, and the teaching of the Catholic Church on universities.

General Education program aims to provide students enrolled as undergraduates with value learning, intellectual inquiry and to cultivate particular skills to become thoughtful and engaged and active citizens of the country, the region and the world while bringing them to a critical and appreciative understanding of religious tradition, ethical theories and moral development.

To this end, at least 30 credits of the undergraduate studies curriculum are devoted to General Education that includes basic general knowledge, common and proper to USEK, while taking into consideration that students who are enrolled in professional fields such as sciences and engineering should be exposed to the humanities and social sciences and students enrolled in humanities fields should be aware of natural sciences and quantitative reasoning:

- **English & French Communication (3 to 6 credits)**
- **Religious Sciences (3 credits)**
- **Quantitative Reasoning (3 to 9 credits):** Mathematics / Statistics / Information Technology & Career Readiness
- **Civic Engagement (2 credits)**
- **Sports (1 credit)**
- **Arts & Humanities (3 to 6 credits):** Ethics and Justice / Arts / Philosophical Inquiry / Language & Literature
- **Social Sciences (3 to 9 credits):** Behavioral Studies / History / Entrepreneurship & Innovation.
- **Sciences & Health (3 to 9 credits):** Biology / Chemistry / Physics / Agriculture / Nutrition / Environment / First aid and Emergency care.

Moreover, through these 30 credits of General Education, the university seeks to make its students good citizens of the future, actively engaged in the development of societies, empowered with a sound culture, possessing know-how as well as humanism, and contributing to the establishment of a better world.

#### **Institutional Learning Outcomes:**

Through USEK General Education, students will be able to:

- Engage in fundamental questions of faith and justice.
- Identify, reflect upon, integrate, and apply different arguments to form independent judgments.
- Collect, interpret, evaluate, and use evidence to make arguments and evidence-based decisions.
- Apply knowledge and tools from various disciplines in order to identify and address intellectual, ethical, and practical problems of relevance to the contemporary world.
- Communicate ideas and arguments through clear writing and speech in English.
- Identify information needs, locate and access information, and critically evaluate sources.
- Collaborate intellectually and creatively with diverse people.
- Engage in the creative process and think critically about, its products, and its cultural traditions to support society.

| This course is designed to upgrade student proficiency in the English language. It offers guidance in critical reading and instructions in writing to develop clear, well-organized prose. It emphasizes the writing process with an introduction to rhetorical strategies, such as compare and contrast, cause and effect, and argument, through the integration of the four language skills (listening, speaking, reading and writing).                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                |              |

| The objective of this course is to give the student the opportunity to make a personal work of exploration and plastic experimentation. The student will use the techniques of watercolor, pastel, and oil painting to create new plastic compositions according to the themes proposed by the teacher.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                |              |

| The course covers the history of world cinema from 1950 to 1985 addressing, among others, the American cinema of Griffith, the Hollywood system and the star system, Russian cinema, German Expressionism, Surrealism and French Impressionism as well as Italian Neo-realism...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                |              |
| <b>AVS202</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Introduction to Theatre Practices</b>       | <b>3 cr.</b> |
| The course develops an introduction to applied theater practices, and motivated learning of technical skills and human qualities. The goal is to introduce students to the performance strategies of actors, and the use of different techniques and exercises to stimulate the imagination and improve concentration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                |              |

| In this course students will study the structures and functions of prokaryotic and eukaryotic cells. We will focus on eukaryotic cells by examining different areas of cell biology including: the plasma membrane and organelles structures and functions, cellular communication, the cell cycle and its regulation, as well as synthesis and function of macromolecules such as DNA, RNA, and proteins.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                |              |
| <b>BIO228</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>General Botany</b>                          | <b>3 cr.</b> |
| The course has two parts: plant histology and biology. Histology is the study of meristems, parenchyma and plant tissues, their origins, their characteristics, and role. Plant biology looks at the lower and higher plants, their characteristics and their classifications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                |              |
| <b>CHI215</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Introduction to Chinese Culture</b>         | <b>3 cr.</b> |
| This beginners course will enrich applicants with the basic knowledge and requirements of the Chinese language. They will come to understand its rules, its alphabet and its history. The interactive course will allow applicants to differentiate between the various constituents of a sentence in Chinese, as well as identify simple characters and be able to draw them correctly to eventually expand their vocabulary.                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                |              |

| This course presents a general introduction to chemistry. It highlights the structure of the atom (various models and properties of the elements in the periodic table), various chemical bonds (Lewis structure, VSEPR rules), thermochemistry (thermodynamics and chemical equilibrium), kinetic chemistry (reactions rate orders, Arrhenius law), solutions chemistry (acids and bases and various acid base equilibrium), complexation, liquid solid equilibrium and solubility product, redox titration and electrochemical cells.                                                                                                                                                                                                                                                                                                                      |                                                |              |

| The purpose of this course is to present a general outline on chemistry. Through this course chemistry is introduced in its various aspects: the structure of the atom, the various models, and the properties of the elements in the periodic table; various chemical bonds, the Lewis structure, VSEPR rules; thermochemistry, thermodynamics and chemical equilibrium; kinetic chemistry, reactions rate orders, the Arrhenius law; solutions chemistry, acids and bases and various acid-base equilibrium; complexation, liquid solid equilibrium and solubility product; and redox titration and electrochemical cells.                                                                                                                                                                                                                                 |                                                |              |
| <b>CSC204</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Information Technology &amp; Networking</b> | <b>3 cr.</b> |
| This course introduces the basics of the integration of information technology and networking in professional life. Subjects treated include: application software; systems software; system unit; Excel spreadsheets; HTML language; physical architecture of a network; internet; internet services; internet protocols (TCP/IP, HTTP, FTP, SMTP et POP ); the IPV4 addressing classes; and applications.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                |              |
| <b>DAA241</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>General History of Art</b>                  | <b>3 cr.</b> |
| The objective of the course is to give students an understanding of the chronological order of events that constitute the history of art. They will use the methodological tools of the discipline, to learn how to situate, compare and understand the relationships between them through a study of their stylistic characteristics and their socio-historical context.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                |              |

| This course aims to introduce students to the concept of Human Rights, since its appearance in history. It presents, initially, the concept of law in the variety of its dimensions, and focuses on the development of charters related to the rights of the human person notably since the Cyrus Cylinder to the Bill of Rights of the man and Citizen (1789).<br>Second, this course focuses on the socio-political, philosophical and theological conditions that favored the emergence of the Universal Declaration of Human Rights (1948).<br>A study from the principles of this Declaration will be developed to effectively sensitize the student to the concept of rights of the human person. This course examines the acceptance of the Declaration and its application in different countries, particularly those hostile to its goals and aims. |                                                |              |

| This course is designed to help students become more effective and responsible speakers and listeners. It will encourage them to communicate more openly in different settings (speeches, debates, group discussion, interviews, etc.). This course teaches students the necessary skills needed to become more articulate in verbal communication. It also highlights the importance of both encoding and decoding in the communication process.                                                                                                                                                                                                                                                                                                                                                                                                            |                                                |              |
| <b>ESP215</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Introduction to Spanish Culture</b>         | <b>3 cr.</b> |

This beginners course will allow applicants to receive the necessary knowledge in accordance with the A1 level of the Common European Framework of Reference for Languages. The course is mainly interactive and focuses on learning based on daily life situations all applicants can relate to, in order to be able to manage simple situations they might be faced with and enlarge their vocabulary for maximum proficiency.

**FRN240 French Communication 3 cr.**

The main objective of this course is to prepare the students to carry out, in French, specific tasks in the varied domains of the social and academic life through the acquisition of communication, linguistic and cultural knowledge and the elaboration of real learning strategies.

The objectives and content of the course are defined with respect to the goals of the Cadre Européen Commun de Référence pour les Langues. Consequently, the pedagogical process of the course will be privileging the action-based approach that involves authentic communication tasks: writing and oral essays, in all (personal, professional or public) fields which will engage the student in an authentic situation of communication.

**GAG303 Introduction to Ecology and Environment 3 cr.**

This course develops an understanding of the principles of ecology, the life supporting and resource generating structures and functions of the ecosystems. It explores the role of atmosphere, hydrosphere and lithosphere in sustaining life. The course also analyses reasons and effects of current and future environmental problems as well as different aspects of sustainable development.

**HIS215 Lebanon in the Ancient Period 3 cr.**

Students will be introduced to the ancient history and antique archeology of Lebanon, including the main historical events and the archeological sites that make this period important for Lebanon. Students will present, through written and material testimonies, the diverse civilizations and the cultures of Lebanon, having gained knowledge and experience through working on archeological sites and studying several themes: arts, crafts, trade, religion, politics, and society. The period examined, distributed over six chronological phases, starts with prehistory and ends at antiquity/the preByzantine era.

**HIS220 Lebanon in the Medieval Period 3 cr.**

Students are introduced to the history of medieval Lebanon, a very important period, which begins with the Arab-Muslim conquest of Lebanon in 636 and which ends in 1516 with the victory of the Ottomans over the Mamelukes. Students will become familiar with research while using primary sources.

**HIS225 Lebanon in the Modern Period 3 cr.**

The history of modern Lebanon extends from the date of the Ottoman victory over the Mamelukes during the battle of Marj Dabek in 1516 to the beginning of the First World War in 1914. Students will learn chronologically about the great periods and events in Lebanon's history, as well as the reign of the Maan and Chehab dynasties, and both Caimacamas, Moutasarifiya (from 1861 to 1915), and the evolution of Lebanese society.

**HIS230 Lebanon in the Contemporary Period 3 cr.**

This course covers the history of contemporary Lebanon from the eve of World War I until the present day. This history includes the formation of the State of Lebanon and the struggle to maintain its integrity and independence. Lebanon was the first political entity established in the Near East since the 16th century. The roots of its political institutions were built during the Mutasarifiya, under the guarantee of major powers. The Lebanese political entity was confirmed through the declaration of the Lebanese Republic in 1926 and its independence. Independent Lebanon, since 1943, has experienced periods of stability and prosperity as well as periods of disturbance and sociopolitical agitation on the local scale, depending on regional and international rivalries.

**HIS234 History and Message of the Lebanese Philosophy 3 cr.**

The course has two parts : the first deals with Lebanese philosophy in its historical evolution and its accretion across the ages, and the second concentrates on analyzing certain selected texts composed by Lebanese philosophers and dealing with some critical philosophical questions which have preoccupied Lebanese philosophy as crucial dilemmas throughout its history.

The first part is entitled "The History of Lebanese Philosophy", and ten weeks are assigned to it. The development of the historical timeline of Lebanese philosophy is based on the work of Kamal El-Hage entitled "Mujaz Al Falsafa Loubnania" (Précis of Lebanese philosophy), while extrapolating it somewhat in order to include contemporary Lebanese philosophers not cited in the above-mentioned work (published in 1974), given that they be deceased philosophers who have put the seal on their philosophical heritage (such as René Habachi, Charles Malek, Etienne Sacre, Farid Jabre , Mehdi 'Amel, Moussa Wehbé, and others.)

The second part is entitled: "Message of the Lebanese philosophy", and five weeks are allocated to this part in the form of philosophical workshops designed in collaboration with the students themselves according to innovative and creative teaching methods. In this part, short texts written by Lebanese philosophers, living or deceased, will be discussed. They deal with existential philosophical questions including, for instance, "God", "Truth and Freedom", "Faith and Reason", "The Ontology of Lebanon", "Lebanon as Message", "Citizenship and Nationate Lebanese Dimension", "The Covenantal Islamic Lebanon", "The Rights of Individuals and Communities".

**HIS235 Phoenician Language and Civilization 3 cr.**

This course focuses on the first stages in human history where writing began to take forms shapes. The Phoenicians were the first to invent the alphabet and the letter with vowels and consonants although in an embryonic manner. The objectives of this courses are summarized as such:

- Help students rediscover the Phoenician alphabet: importance, value, ramifications and influence upon subsequent civilizations.
- Highlight the influence of the alphabet on cultures of various peoples: Greeks, Egyptians, Chaldeans, Assyrians, Nabateans, Arabic and others in various regions of the Near East.
- Understand the origin of many present alphabets to include Nabatean, Palmyri, Thamoudean, Aramean and others.

Grasp and appreciate the role the Phoenicians through this invention have played in the development of world cultures, international relations, trade and many forms of science and arts.

**HUM248 Arab World and Civilization 3 cr.**

This course aims to introduce the student to discover the diffusion centers of the Arab-Muslim culture.

The course takes its starting point to Mecca, birthplace of Islam, embraces capitals and cultural centers of the Umayyad and Abbasid empire through Damascus, Baghdad, Cairo, Cordoba, Kairouan and Morocco.

The course focuses thus on the intermingling of races, peoples, cultures that gave birth to a Muslim-Arabo civilization based on a Greco-Arabic, Muslim-Arab, Judeo-Islamic and Christian-Islamic syncretism.

**HUM258 Societies and Environment 3 cr.**

This course concerns the physical, natural and social environment of the Mediterranean geographical space. The course exposes the environmental risks at different levels: ground, atmospheric and maritime.

It also handles (treats) the sustainable development as effects and consequences on the quality of life of the human being in the context of the Mediterranean societies. Thus, the course presents the multiple environmental policies in the national territorial scale in order to advance an ideal type of environment policy of involving national, regional and local authorities.

| This course is intended for any student wishing to keep abreast of contemporary pedagogical thinking through the work of educationalists that have marked our age (Dewey, Montessori, Decroly, Claparède, Cousinet Freinet). In this regard, the aspect of the pedagogical relationship is tackled within the meaning of the authoritarian pedagogy (Alain), of non-directive pedagogy (Roger), of institutional pedagogy (Oury), of pedagogy by objectives (Mager) and of differentiated instruction (Meirieu). The introduction to these various educational streams is accompanied by readings of reflection on the aims of education, on the values to be transmitted and on the search for a new ethic for the learner as well as the teacher. |                                           |              |

| This course seeks to initiate the students to the sources of Western literature through the study of Greek and Roman myths. The course consists of two parts. The first part includes the definition of myth in general, of the Oedipus myth in particular, and a presentation of ancient tragedy. The second part focuses on the comparative study of ancient tragedy and a classic tragedy. The course concludes with an introduction to the myth criticism approach.                                                                                                                                                                                                                                                                             |                                           |              |
| <b>MAT216</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>General Mathematics</b>                | <b>3 cr.</b> |
| This course provides the solid basics needed by students to be able to handle their specialty courses. Topics covered include: function of a real variable, elementary functions, Taylor's expansion, simple integral and methods of integration, differential equations, multivariable functions, continuity, partial derivative, the chain rule, differential, introduction to double integrals, methods of integration, matrix calculus, determinants, and linear systems.                                                                                                                                                                                                                                                                       |                                           |              |
| <b>MGT225</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Foundations of Entrepreneurship</b>    | <b>3 cr.</b> |
| This course acts as a bridge between theory and the real-life application of academic principles. It complements the academic journey by introducing the students to the concept of entrepreneurship as way to turn their ideas into businesses that can create value in the marketplace. It starts by introducing the students to the entrepreneurial culture and mindset and ends by suggesting tools and methods that they can use if they decide to follow an entrepreneurial path in life.                                                                                                                                                                                                                                                     |                                           |              |
| <b>MUS200</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Musical Initiation</b>                 | <b>3 cr.</b> |
| This course will introduce students to the basics of music; it will cover material such as pitches, rhythms clefs, scales and dynamics. The utility of this course as part of the general requirement is to become familiar with the musical language through experiences based on fun activities making it enjoyable as well as useful.                                                                                                                                                                                                                                                                                                                                                                                                            |                                           |              |
| <b>MUS202</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Musical Listening and Appreciation</b> | <b>3 cr.</b> |
| Not enough people listen to art music critically. This course proposes is to introduce students to the masterpieces of so-called classical music, from the middle ages to the present day. The course includes, in a first step, the presentation of the composer and his career as historical and artistic; Secondly, it addresses the structure and the content of the selected artwork. The 'tools of perception' are the component dominant in the explanatory part of the course.                                                                                                                                                                                                                                                              |                                           |              |
| <b>MUS222</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>A General History of Music</b>         | <b>3 cr.</b> |
| For some people, music can be an orchestral symphony, a jazz set, an electronic beat or even something as simple as bird's chirping. This course is a moment to ponder what music means as students meet the history of music.<br>From the Origin when and where music originated, and the 6 periods of music Medieval/Middle Ages, Renaissance, Baroque, Classical, Romantic, 20th-Century, each period has a particular style that greatly contributed to what music is today.                                                                                                                                                                                                                                                                    |                                           |              |
| <b>MUS243</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>History of the Lebanese Music</b>      | <b>3 cr.</b> |
| This course is designed to:<br>1 - Sensitize students to Lebanese folk music.<br>2 - Make them aware of the danger that threatens this music: a heritage endangered. The disappearance of the songs with the disappearance of the circumstances and opportunities serving their raison d'être. The disappearance of the 'old', guardians and deliverers of the tradition. A heritage uncollected, not recorded in a scientific way.<br>3 - Let them know the diversity of forms: mostly unwell known and unknown forms.<br>4 - Study Poetic-musical internal structure of each form of traditional song.                                                                                                                                            |                                           |              |
| <b>NTR211</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Fundamentals of Human Nutrition</b>    | <b>3 cr.</b> |
| This three-credit course introduces the basic concepts related to nutrition. It gives an overview of nutrients, including their food sources, digestion, metabolism, functions, and requirements in humans. This course also examines the use of dietary guidelines and recommendations to assess the nutrient intake of healthy individuals. Upon completion of the course, students will be able to make optimal food choices for better health.                                                                                                                                                                                                                                                                                                  |                                           |              |
| <b>PHI201</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Introduction to Philosophy</b>         | <b>3 cr.</b> |
| The course will introduce students to philosophical thinking and practice. It will cover, on the one hand, the main philosophical currents, highlighting their specificity and their creative input and, on the other hand, the most representative authors in the history of philosophical thought. In an effort not to separate these themes and the fundamental questions of mankind, the course attempts to show the relationship that develops between the aforementioned notions, with the aim of addressing their impact on certain world views that constantly interpolate us within contemporary societies.                                                                                                                                |                                           |              |
| <b>PHI210</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Greek Philosophy</b>                   | <b>3 cr.</b> |
| This course is divided into two parts: the first part examines pre-Socratic sources that give students the proper tools to acquire philosophical thinking in their quest for the nature of things, and in their attempt to unveil both natural and human phenomena. It thus includes the main schools of thought such as the School of Miletus (Thales, Anaximander, Anaximenes), the Pythagorean school (Pythagoras), the Ionian school (Heraclitus), the Eleatic school (Parmenides), as well as the Sophists.<br>The second part deals with Socrates, Plato and Aristotle.                                                                                                                                                                       |                                           |              |
| <b>PHI212</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Philosophy of Earth</b>                | <b>3 cr.</b> |
| The course offers a reflection on the Earth and the human relationship with the Earth along three axes: a first semiotic and semantic axis that delineate the meaning of the concept "land" in the history of thought; a second interdisciplinary axis that deals with land in philosophy, in theology, in physics, in ecology, in economics and in art; and a third ethical axis that will address the different aspects about the "terrestrial" actuality including media activity where the Earth is with a stronger presence.<br>The Lebanese land constitutes the subject of the course as intercultural breeding ground.                                                                                                                      |                                           |              |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                |              |

| This course offers an introduction to photography, use and handling of photographic emulsions, to enable students to acquire the principles of photography and adopt the logic of this medium. At the end of this course, students should be able to master the basics of photography, and this includes scientific techniques of image formation and the first visual esthetic laws.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                |              |

| The objective of this course is the introduction of various laws, principles and physical mechanisms, whose understanding is essential to students pursuing studies in various branches of science. This course consists of several independent parts. The first one deals with dynamics, the different types of motion, Newton's laws, and conservation of energy. The second part deals with hydrostatics and fluid dynamics. The third part deals with thermodynamics, calorimeters, the first principle and the basic transformations, the ideal gas, and thermodynamic cycles. The fourth part concerns the analysis of simple electrical circuits using Kirchhoff laws and the movement of a particle in an electromagnetic field. In the fifth part we talk about relativity, the theory of photons, and the photoelectric effect. Upon completion of this course the students will have acquired sufficient knowledge of several basic principles in physics and be familiar with these various topics.                                                                        |                                                |              |
| <b>POL211</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Introduction to Political Science</b>       | <b>3 cr.</b> |
| This course defines the notion of policy. It questions the concepts of "Political Science" and the different "Political Sciences" with a focus on the field of policy. The concept of State is an important part in this introduction given the interdependence and complementarity between "political" and "State".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                |              |

| This course offers an introduction to geopolitics, its development through history and, its different schools of thought. An analytical approach to the geopolitics of Lebanon and the Middle East is a key aspect of the course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                |              |

| This course will provide students with the basic concepts in psychology and will facilitate their access to knowledge during their academic curriculum. It includes the following objectives: understanding psychology from a historical and a theoretical perspective (Gestalt, phenomenological, experimental, scientific, psychoanalytic and cognitive, etc.); understanding the various fields of psychology (clinical, experimental, developmental, educational, social, etc.) and the different methods used (experimental, clinical, psychometric, projective, etc.); providing an appropriate approach to personality issues - basic needs, affective and emotional (feelings, emotions), intellectual (cognition, memory) and social (social influence).                                                                                                                                                                                                                                                                                                                      |                                                |              |
| <b>RIN205</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Anthropology of Travel</b>                  | <b>3 cr.</b> |
| The course aims at analyzing the experience of travelling under many aspects: from the idea itself of travel, to the comparison between different travelers, to its deep implications in history, economy, philosophy, psychology, sociology, literature, painting, cinema etc. A "travel into travel", for being richer when returned to the starting point and capable of managing projects and activities connected to travel. Each lesson will be based on the reading of texts and main interpretations, in order to enable the students to advance their own critical hypothesis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                |              |
| <b>SIN244</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>First Aid and Emergency Care</b>            | <b>3 cr.</b> |
| Teaching is divided into four parts:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                |              |

| This course provides a basic knowledge of general sociology: a) it presents an overview of the context of event emergence of sociology on the basis of the main founders and focuses on the methodological perspectives and applied sociological methods and techniques; b) it focuses on the key principles of social themes, which description and definition have fueled the many debates that are changing this discipline within the vast corpus of scientific knowledge. This course provides the students with general sociology elements, sensitizes their "sociological perspective" and develops critical reflection on various social issues.                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                |              |
| <b>SOC210</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Introduction to Anthropology</b>            | <b>3 cr.</b> |
| This course focuses on the complex question of humans and the place of anthropology within the science of humanity. It addresses the key conceptual notions of anthropological reflection (society, myth, ritual, tradition, symbol, etc.). Similarly, the course presents the components of the research framework, both practical and theoretical, of anthropological study. It develops the basic foundation of the entire social system and proposes the discovery of trends of current anthropological topicality and openness to contemporary anthropology. Upon completion of this course students will be able to understand the concepts of anthropology and its fundamental concern that allows it to guard against social, cultural, sexist and racial prejudice.                                                                                                                                                                                                                                                                                                           |                                                |              |
| <b>SOC211</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Youth and Society</b>                       | <b>3 cr.</b> |
| This course aims to reflect on the multi- dimensional experience of youth. It positions it in relation to other age groups, by conducting an analytical reading through the concepts and notions of value, norm, culture, ritual, symbol, engagement, life project, the social role of religion, etc. ; to reach the level of placing the youth in spaces and social times such as: family, friends, leisure, associative and political life. The course is particularly interested in young people as the key to any social construction and any change of mentality in favor of a humanist dialogue among societies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                |              |
| <b>SOC217</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Citizen and Civic Engagement</b>            | <b>2 cr.</b> |
| The course aims to teach USEK students notions, concepts and practical applications indicative of a civic and citizenship commitment which would contribute to the development of society.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                |              |
| This course is built on theoretical and practical learning areas as follows: a) Acquiring the concept of commitment and its forms (contract, charity work, activism, promise, voluntarism, giving, love of the other, etc.); b) Adopting the fundamental values of citizens such as: freedom of religion and expression, justice, equality, togetherness, family and social solidarity, patriotic and world collective identity, the place of religion in society, etc. .); c) Integrating the components of social life: democracy, laws, rights, civil society, communal life, social and community diversity, participation in political and public life, elections, individual, institutional and collective security, municipal activities, union activities, etc...) d) Addressing and dealing with social issues such as sustainable development, community health, social discrimination, work ethics, the integration of people with special needs, etc. (A description of performed observation and action is provided with the course, based on concepts covered in class). |                                                |              |
| <b>SOC225</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Work Ready Now</b>                          | <b>3 cr.</b> |

The Work Ready Now course is designed to provide students with the foundational “soft skills” and work-based learning experiences to prepare them for success in the workplace. Work Ready Now is designed to facilitate participatory, hands-on teaching and learning. Students will be actively engaged in the learning process and provided opportunities to practice and enhance new skills and gain the self-confidence necessary to secure and maintain work related to their professional goals. Work-based learning activities are woven into the course and will require students to go to real workplaces in the community outside of class time. Students will be guided to use free online digital tools to demonstrate their learning. Throughout the course, students will create a career portfolio that will help them on their experiential Work Ready Now! journey from student to employee.

**SRO210 Christianity in a Course 3 cr.**

This introductory course to Christianity examines the different elements of Christian Beliefs, History and Practice. It starts from the definition of the basic Principle of God's relationship to man, Love, as revealed in Sacred History (Creation-Incarnation-Redemption). This course deals with the Teaching function of the Church and its role as a Community where the Faith is manifested through the Liturgy and the Sacraments. Art in Christianity, Spirituality, Ethics and the relationship with non-Christians will also be studied. Through the deepening of each theme, this course will provide a global idea of the Vision of the Man and the World from the Christian perspective.

The aim of this 'pretentious' course is to offer a global view of Christianity. It will satisfy the curiosity of those who only want to acquire basic knowledge, and will provide the essential tools to those who seek to deepen their Christian Faith.

**SRO211 Introduction to the Bible 3 cr.**

The goal of this course is to introduce students to biblical theology, based mainly on the subject of divine-human alliance. Through responses to the history of geographic and historic progression, particularly pertinent to us since Lebanon is a part of the Holy Land, the issue of inspiration, revelation and canonicity of sacred texts, the presentation of literary genres and direct contact with biblical texts, will give students a general idea about the divine-human process promised in the Book of Genesis and accomplished by Jesus Christ. The Bible, a book said to be hard to understand and sometimes impossible to even be considered as credible (especially in the Old Testament, which remains inaccessible), is made approachable in this course because it introduces us, not only to the face of God the Teacher who never tires of understanding the “ungrateful” people, but also the Loving face of God who insists on establishing an alliance with the whole of humanity even though they crucified his Son. Students who finish the course will acquire the understanding that each biblical story is a reflection to their own story with the “Good God”.

**SRO213 Religious Pluralism and Dialogue 3 cr.**

In Today's world, interfaith dialogue cannot be ignored as a main need of communication among the world's religions especially since violent acts and genocides in the name of religion are unfortunately becoming a reality.

“Religious Pluralism and Dialogue” course is designed to introduce students - intellectually and actually - to different religions within the same society, where religious people can interact freely and live peacefully side-by-side.

During the semester, the main topic to be discussed is how to turn an encounter into dialogue. This will be achieved by building a complete understanding of dialogue as a style of communication. In addition, a systematic typology of approaches will be introduced aiming to show the results of interfaith dialogue and to clarify the dynamics under religious pluralism.

Through this course, students are invited to cross into worldviews of Jewish, Christian and Muslim neighbors in order to perceive the real similarities and differences with their own perspective.

**SRO214 Christian Presence in the Middle East 3 cr.**

This course will introduce students to the extensive history of the Churches in the Middle East, their vocation and their current situation. Knowledge about this subject is fundamental for the Proclamation of the Gospel, the quality of the testimony, ecumenical dialogue and conviviality in the Lebanese context. The main goal of this course is to provide the students with the elements and tools for serving the Church and the world.

The Christian presence in the Middle East finds its meaning in the vocation and mission vested in our churches issued from a surprising plurality. The proclamation of the Gospel in this region of the world depends on ecumenism and interreligious dialogue which somehow constitute two major components of the subject of this proclamation. The challenges are significant, given the complexity of the current situation in which the Christians in the Middle East are struggling. These challenges are discussed both in the Apostolic Exhortation of Pope John Paul II at the end of the special meeting of the Synod of Bishops for Lebanon, entitled A New Hope for Lebanon (1997), and in various pastoral letters by the Council of Catholic Patriarchs of the East, in particular those of Easter 1992 entitled The Christian presence in the East: Testimony and Mission, Christmas 1994 entitled Together Before God for the Good of the Individual and Society (the coexistence between Muslims and Christians in the Arab world), and Easter 1999 entitled The Ecumenical Movement "May Them All Become One". Analytical reading of these documents is likely to ensure better reception of the content in the ecclesial community and give the Christian presence in the Middle East its full meaning.

**SRO215 Social Teachings of the Church 3 cr.**

This course serves as an introduction and examination to basic concepts and methods necessary in social ministry of the Church today. It reflects Gospel values of love, peace, justice, compassion, freedom, service and community in the context of modern social problems.

The goals of this course are to increase students' understanding of the concepts of catholic social thought and of concurrent developments in social theory more generally and to apply these understandings and skills to specific societal and cultural settings.

**SRO216 Religion and Politics 3 cr.**

The ambiguous relationship between religion and politics dates far back to times and eras in human history. This ambiguity is caused by the two specific models for this relationship, based on the limitation of the understanding of religion to the religious institution and doctrine which is summed up by the religious institution in its interpretation. When a given authority meets another one, and a certain doctrine encounters another doctrine, such as policy, confusion about the nature of the relationship will happen. On the other hand, there is another reality, specifically undervalued in the East, which is that religion is an internal requirement in human life and societies. This requirement is widely and clearly addressed in the books of thinkers, as they discover that religion is a constituent idea in human existence and a source of inspiration, and see that religion is about revealing the human history and the history of people and communities. In this context, the image of the relationship becomes different. Confusion is then unveiled, and the relationship moves from exclusion to dialogue, especially in the political sphere, according to the saying of one of the biggest jurists and political philosophers of our time, Bockenforde: “The liberal secular state lives on premises that it cannot itself guarantee”.

These elements are the focus of our attention in this course.

**SRO217 Bioethics 3 cr.**

More and more, human beings have acquired power over nature due to sciences development and techniques. As a result of biology progress, he is trying to master health problems, reproduction and genetics. As for an essential question: Is all possible desirable?

This biological - techno - scientific upheaval which is causing an effective medicine meet another socio-cultural and ideological upheaval that has influenced the representations of life and death, health and sickness, care and preventive care, curative and palliative treatment... These changes are causing a huge social phenomenon that was materialized with bioethics term in 1971.

**SRO218 The Church and Mass Media 3 cr.**

In a world that is becoming secularized, where Christianity is marginalized and where language is not common, the Church, custodian of the Gospel (Word, Voice and Image of God) has something to say to the communication's world (speech means, sounds and human images).

In parallel, the Church would need the media to deliver to this secularized world her message of salvation.

- With the increased importance and development of the social media it is important to know the Church's doctrine regarding the world of mass communications. What are, in a comparison, and in practical cases, the positions of other religions (Islam, Judaism) vis-à-vis of these media?
- What is the best way for the Church to fulfill its mission of humanization and evangelization through the mass media and communication tools (word, sound, image)?
- How can she develop an appropriate communication strategies to deliver its message to Christians and non-Christians?
- For their part, how the so called new media (those of the digital age) have to be at the service of peace, human rights, freedom, human dignity and dialogue between religions and cultures?

This course is an answer corpus, theoretical and practical, for this multifaceted problem.

**STA220 Probability and Applied Statistics 3 cr.**

This course prepares students for the practical use of probability and statistics in the biomedical field (agronomy, chemistry, biochemistry, nutrition, medicine, etc.). Topics to be covered are: elements of descriptive statistics, population, statistical units, frequency distribution, and characteristics of central tendency and dispersion. The course also covers these aspects in detail: probability and combinatorics, conditional probability and Bayes' formula, applications, discrete and continuous random variables, expectation and moments, the weak law of large numbers, empirical frequencies and basic probability laws (Binomial, Multinomial, Poisson, Normal) and asymptotic behavior, the law of large numbers, sampling and estimation, and an introduction to the use of hypothesis tests, and the Chi-2 contingency table.

**THT280 Introduction to Acting 3 cr.**

Introduction to different fundamental techniques used in the creation of a character. Emphasis on relaxation, concentration, and development of a role through sensorial and emotional memories. Students will improvise and do monologues as exercises in this introductory course.

# Business School

## Overview

The School was first founded in 1966, under the name of the Faculty of Business and Commercial Sciences and was considered as one of the pioneers in business education in the Near-East and was later, in 2018, renamed as the Business School. As part of USEK, it has dedicated itself, since its creation, to teach students how to administrate organizations, in the scope of sustainable development, while remaining devoted to its three-hundred years tradition of the Lebanese Maronite Order, a heritage conscientiously preserved and incessantly enriched. In 50 years, we have succeeded in providing local and regional markets with a wide range of specializations under the American Credit System in BBA, MBA, and PhD.

## Mission

We offer quality programs in business in a student-centered environment and help our students in achieving their goals. Through enriching multidisciplinary programs, we nurture an entrepreneurial spirit and graduate civically minded and ethically responsible professionals for the sustainable development of Lebanon and the region.

The Business School consists of the following programs:

### Undergraduate Programs

- Bachelor of Business Administration
  - Emphasis:*
    - Audit
    - Finance – CFA®I Path
    - Business Computing
    - Management and Entrepreneurship
    - Marketing
    - Transport and Logistics
- Bachelor of Business Administration - Hotel Management
- Minor in Audit
- Minor in Finance
- Minor in Hotel Management
- Minor in Management and Entrepreneurship
- Minor in Marketing

### Graduate Programs

- Master of Business Administration
  - Emphasis:*
    - Audit
    - Finance
    - Marketing
- Master of Business Administration - Financial Engineering
- Master of Business Administration - Human Resources
- Master of Business Administration - Management and International Affairs
- Executive Master of Business Administration - Digital Management

### Doctoral Programs

- Ph.D. in Business

## Administration and Full-time Faculty

Dr. Danièle Khalifé-Fraiha, Associate Professor, **Dean**

Dr. Nada Sarkis, Associate Professor, **Associate Dean**

### **Professors:**

Prof. Nehmé Azoury

Fr. Prof. Georges Azzi

### **Associate Professors:**

Dr. Antoine Habchi

Dr. Badih Baz

Dr. Hajer Jarrar

Dr. Madonna Salameh-Ayanian

Dr. Mario Sassine

### **Assistant Professors:**

Mr. Charles Assouad

Dr. Fleur Clara Khalil

Dr. Gisèle Msann

Dr. Georges Jalkh

Dr. Jeanne Kaspard Kamel

Dr. Jeanne Mawad

Dr. Jihane Adeimi

Dr. Joseph Azzi

Dr. Michel Karam

Dr. Miriam Aziz

## Undergraduate Programs

### Bachelor of Business Administration

#### Emphasis

|                                   |                     |                                                          |
|-----------------------------------|---------------------|----------------------------------------------------------|
| Audit                             | Hybrid <sup>i</sup> | Main Campus Kaslik, RUC Zahle and RUC Chekka             |
|                                   | English             | Main Campus Kaslik                                       |
| Finance– CFA®I Path <sup>ii</sup> | Hybrid              | Main Campus Kaslik, RUC Zahle, RUC Chekka and RUC Rmeich |
|                                   | English             | Main Campus Kaslik                                       |
| Business Computing                | English             | Main Campus Kaslik                                       |
| Management and Entrepreneurship   | English             | Main Campus Kaslik                                       |
| Marketing                         | English             | Main Campus Kaslik                                       |
| Transport and Logistics           | English             | Main Campus Kaslik                                       |

**Learning Goal 1:** Graduates will have the knowledge related to various disciplines in business administration.

Learning Objective 1: Identify the fundamental theories from the disciplines in audit, business computing, finance, management, marketing, and transport and logistics.

Learning Objective 2: Analyze and compare/contrast the various theories from the disciplines in audit, business computing, finance, management, marketing and transport and logistics.

**Learning Goal 2:** Graduates will have the necessary skills to communicate effectively.

Learning Objective 1. Practice formal oral presentation skills.

Learning Objective 2. Compose professional business reports.

**Learning Goal 3:** Graduates will be ethically responsible.

Learning Objective 1. Identify ethical issues related to various business fields.

Learning Objective 2. Indicate the implications of ethical issues related to various business fields.

**Learning Goal 4:** Graduates will be able to work in teams.

Learning Objective 1. Set goals/tasks and execute them within a specific time.

Learning Objective 2. Listen to other (opposing) viewpoints.

Learning Objective 3. Communicate own viewpoints with others.

**Learning Goal 5:** Graduates will have an entrepreneurial mindset.

Learning Objective 1. Write a business plan for venture opportunities.

#### Degree Requirements

This program requires 99 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                                     |           |
|---------------------------------------------------------------------|-----------|
| <b>General Education</b>                                            | <b>30</b> |
| General Education - Civic Engagement                                | 2         |
| General Education - English and French Communication                | 3 to 6    |
| General Education - Behavioral, Social Sciences and History         | 3         |
| General Education - Science and Health <sup>iii</sup>               | 0 to 3    |
| General Education - Sports                                          | 1         |
| General Education - Religious Sciences                              | 3         |
| DRT223 - Business Law                                               | 3         |
| CSC204 - Information Technology and Networking                      | 3         |
| ECO222 - Macroeconomics or MGT225 - Foundations of Entrepreneurship | 3         |

<sup>i</sup> Hybrid: Course offered in French and/or English

<sup>ii</sup> Students enrolled in the Finance – CFA®I program are required to take the course ECO222

<sup>iii</sup> Students enrolled in the hybrid section are required to take the course FRN240- French Communication instead of 3 credits from the Science and Health category

|                                                               |           |
|---------------------------------------------------------------|-----------|
| MAT216 - General Mathematics                                  | 3         |
| STA220 - Probability and Applied Statistics                   | 3         |
| <b>Common Core</b>                                            | <b>37</b> |
| ACT210 - Financial Accounting I                               | 3         |
| ACT220 - Financial Accounting II                              | 3         |
| BUS211 - Mathematics of Finance                               | 3         |
| BUS303 - Business Planning                                    | 3         |
| ECO221 - Microeconomics                                       | 3         |
| ENG290 - Business Professional                                | 3         |
| FIN310 - Financial Management                                 | 3         |
| FIN315 - Financial Analysis                                   | 3         |
| MGT220 - Principles of Management                             | 3         |
| MGT330 - Human Resources Management                           | 3         |
| MIS320 - Quantitative Techniques Applied to Business          | 3         |
| MKT220 - Principles of Marketing                              | 3         |
| BUS345- Enterprise Internship                                 | 1         |
| <b>Electives</b>                                              | <b>9</b>  |
| ACT225 - Internal Audit                                       | 3         |
| ACT320 - Cost Accounting                                      | 3         |
| BUS390 - Verbal and Non-Verbal Communication for Business     | 3         |
| FIN420 -International Finance                                 | 3         |
| FIN421 - Financial Markets                                    | 3         |
| ITB321 - Database                                             | 3         |
| ITB350 - E-Business                                           | 3         |
| MGT320 - Organizational Behavior                              | 3         |
| MGT415 - Small Business Management                            | 3         |
| MKT415 - Brand and Product Management                         | 3         |
| TRA310 - Transport and Logistics                              | 3         |
| LCB200 - Introduction to Hospitality Management               | 3         |
| <b>Finance Mandatory Electives:</b>                           |           |
| FIN423 – Fundamentals of Fixed Income                         | 3         |
| FIN424 – Financial Reporting                                  | 3         |
| <b>Management &amp; Entrepreneurship Mandatory Electives:</b> |           |
| BUS410 – Operations Research                                  | 3         |
| MGT405 – Project Management                                   | 3         |
| <b>Marketing Mandatory Electives:</b>                         |           |
| MKT350 – Digital Marketing                                    | 3         |
| MKT405 - Media Planning                                       | 3         |
| <b>Emphasis: Audit</b>                                        | <b>23</b> |
| ACT225 - Internal Audit                                       | 3         |
| ACT312 - Advanced Accounting                                  | 3         |
| ACT320 - Cost Accounting                                      | 3         |
| ACT330 – External Audit                                       | 3         |
| ACT410 - Groups Accounting                                    | 3         |
| ACT425 - Management Control                                   | 3         |
| BUS320 - Taxation                                             | 3         |
| <b>Capstone: ACT455 - Enterprise Simulation</b>               | <b>2</b>  |
| <b>Emphasis: Finance</b>                                      | <b>23</b> |

|                                                     |           |

## Academic Minors

### Minor in Audit <sup>Hybrid<sup>i</sup></sup>

#### Mission

The mission of the audit minor is to prepare students for careers involving financial and cost accounting or internal auditing, in order to enable them to understand how to prepare, analyze and use the information produced by companies and thus integrate them in the world of work. This happens through offering them an adequate knowledge of management and auditing.

#### Program Educational Objectives

1. Students will integrate effectively in a professional context involving financial and cost accounting, internal auditing and management and grow into mature, ethical, and honest specialists.
2. Students will demonstrate strong communication skills and master the concepts, methods and tools of financial and cost accounting and internal auditing by developing their capabilities to observe, analyze, solve problems, and advise.
3. Students will conduct their work using logical analysis, reasoning, and clear-sightedness, while adapting to all the different operational situations of the company. They will ensure a regular update of their legal and regulatory knowledge and will be active and responsible members of their communities.

#### Program Outcomes

- a. Students will prepare the financial statements of a company and analyze its financial structure, cash flow, activity and profitability.
- b. Students will master the essential components related to the internal control system and the international standards of internal auditing and understand the objectives and strategy of a company.
- c. Students will evaluate short- and medium-term decisions and understand the role of the management accountant in an organization and how company resources can be deployed to reach the expected objectives.
- d. Students will understand professional, ethical and legal problems and ensure regular updates of knowledge, to work effectively in a team and communicate properly with different audiences.

| The course explains in detail the main components of a balance sheet and explains the nature, classification, and treatment of accounting for long term assets, current assets, liabilities, and stockholders' equity. The main objective of the course is to provide students with a general knowledge of the preparation of financial statements, in addition to the analysis of the financial figures with the key ratios and comments, and the preparation of the company's cash flow.                                                                                                                                                                                                                                                                                                                                                                                                  |                                                 |              |

| This course explains all the procedures and recommendations that provide the safeguarding of assets, reliability and integrity of financial and operational information, and the effectiveness and efficiency of operations designed to improve the performance of an organization. The course allows the participants to obtain an understanding of the concepts, methodologies, and tools of internal auditing, to understand the role of internal auditing in identification and evaluation of risks and in improving governance processes of organizations.                                                                                                                                                                                                                                                                                                                             |                                                 |              |
| <b>ACT230</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Hospitality Accounting</b>                   | <b>3 cr.</b> |
| This course provides a solid introduction to accounting for those students who are required to study hospitality accounting. It is also of benefit to those managers in business, government, or industry whose work involves them in dealing with accounting information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                 |              |

| This course will teach students how to prepare constitution legal entity accounting transactions, liquidation accounting transactions and any unusual accounting items. The objective of the course is to train the students how to understand financial statements and how to prepare the four statements and disclosures under IFRS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                 |              |

| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | ACT312 And ACT320                               |              |
| Financial Statement Auditing is accumulation and evaluation of evidence according to established criteria (ISA's, IFRS, GAAP, accounting policies, etc.). This course is intended to introduce the auditing profession and explain the auditing processes and their application on all the transaction cycles, with the objective to express an opinion on the fair presentation of the financial statements of a company. The course will enable students majoring in auditing to differentiate between assurance and nonassurance services, type of audits, type of auditing opinions and the preparation of a complete audit file. It will explain the auditing process from planning to closing a meeting.                                                                                                                                                                              |                                                 |              |

| Corporate acquisitions, mergers and the formation of other strategic alliances, and international transactions are staples of today's business environment. The objective of this course is to provide students with an understanding of financial reporting for these complex business transactions and the entities they create. Specific topics include accounting for business combinations, consolidated financial statements, financial reporting for partnerships, and foreign currency transactions. This class is taught from the perspective of a preparer of financial statements (as opposed to a user) and involves a significant amount of technical detail. This course requires students to solve complex problems, use information technology and to communicate clearly and concisely in writing to enable them to prepare consolidated financial statements as per IFRS. |                                                 |              |

| The course illustrates how costs work and presents some analysis and key performance indicators, in addition to capital budgeting models useful for business decisions. The main objectives include detailed descriptions of cost behavior, pricing decisions, balanced score card, sales variance analysis and capital budgeting decisions. The student will be able to assess the business key performance indicators and handle capital budgeting.                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                 |              |

| The objective of this course is to explain the mission and objectives of the International Accounting Standards Board (IASB), the scope of the International Financial Reporting Standards (IFRS), processes for developing IFRS and interpretations, and policies. IFRSs apply to general purpose financial statements and other financial reporting by profit-oriented entities; those engaged in commercial, industrial, financial, and similar activities, regardless of their legal form. Moreover, entities other than profit-oriented businesses may also find IFRSs appropriate. Students will learn to understand how the IASB framework works, some of the standards listed in IFRS, and how the whole conceptual framework and embedded standards work.                                                                                                                          |                                                 |              |
| <b>AUD610</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Regulation (CPA)</b>                         | <b>3 cr.</b> |

| The main objective of this course is to examine taxation, ethics, professional and legal responsibilities and business law topics, as well as the skills needed to apply that knowledge.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                 |              |
| <b>AUD615</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Financial Accounting and Reporting (CPA)</b> | <b>3 cr.</b> |
| This course will cover accounting principles for business enterprises, governmental entities and non-profit organizations, as well as provide the skills needed to apply that knowledge. Through considering questions about the International Financial Reporting Standards (IFRS), the course allows the participants to identify and understand the difference between financial statements prepared on the basis of U.S. GAAP and those prepared on the basis of IFRS.                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                 |              |

| <b>Co-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | AUD625                                                  |              |
| This course will offer knowledge of auditing procedures, auditing standards and other standards related to attest engagements, as well as provide the skills needed to apply that knowledge. The course allows the students to become familiar with the International Auditing and Assurance Board (IAASB) and its role in establishing International Standards on Auditing (ISA).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                         |              |

| This course provide participants knowledge of general business environment and business concepts in order to understand the underlying business reasons for, and accounting implications of, business transactions. Questions pertaining to international standards will test students' grasp of globalization in the business environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                         |              |
| <b>AUD630</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Internal Auditing Strategy</b>                       | <b>3 cr.</b> |
| The course objective is to deepen knowledge in the field of internal auditing. It also allows students to draft a detailed program related to operational and internal auditing that is applied to the enterprise specific functions or operations, and to understand strategic norms and principles linked to the internal auditing mission.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                         |              |
| <b>AUD635</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>International Financial Reporting Standards 1</b>    | <b>3 cr.</b> |
| The course is designed to develop the students' knowledge and understanding of International Financial Reporting Standards. Students will also learn how to apply the standards, as well as the concepts and principles which underpin them. Students interested in obtaining the Diploma in International Financial Reporting (DiplFR) will find the content of this course helpful to prepare for the exam, along with the content of the 'IFRS 2' course which includes the remaining subjects covered by the DiplFR but not included in this course. The list of topics covered in this course include but are not limited to: the conceptual framework, elements of the financial statements (Revenue, tangible non-current assets, intangible assets, goodwill, provisions, foreign currency transactions, other assets) in addition to the presentation of financial statement, earnings per share, related party disclosures, and segment reporting. |                                                         |              |
| <b>AUD640</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>International Financial Reporting Standards 2</b>    | <b>3 cr.</b> |

| The course is designed to develop the students' knowledge and understanding of International Financial Reporting Standards. Students will also learn how to apply the standards, as well as the concepts and principles which underpin them. Students interested in obtaining the Diploma in International Financial Reporting (DiplFR) will find the content of this course, along with IFRS 1 course content, helpful to prepare for the exam. The list of topics covered in this course include but are not limited to: leases, financial instruments, employment and post-employment benefits, share-based payments, fair value measurement, and preparation of group consolidated external reports.                                                                                                                                                                                                                                                     |                                                         |              |
| <b>BUS211</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Mathematics of Finance</b>                           | <b>3 cr.</b> |

| Generating a business plan needs a methodological approach that provides students with a road map to follow to create new business ideas or develop existing ones. As most businesses seek financial sources, it helps students and future entrepreneurs to introduce potential investors to business opportunities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                         |              |

| This course allows students to apply knowledge and skills acquired at the University in a real-life setting. The main goal is to obtain hands-on experience necessary to qualify for a good entry level position in business. Moreover, students will learn how to create and write a professional report with emphasis on their experience in their field of specialization. The course is thus practical and theoretical in the sense that students will participate in theoretical classes at the University and at the same time partake in a 120-hour training program at a recognized corporate establishment.                                                                                                                                                                                                                                                                                                                                         |                                                         |              |

| This business English language course is a workshop course, which includes mostly taskbased activities, along with theory sessions, team and individual research projects, role playing, questionnaires, team building experiences and team oral presentations. The course teaches practical skills and the rules of conduct needed within the business environment where English is spoken.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                         |              |

| Operations Research is an art and science at the same time. The art part is acquired through experience, while the science part is based on the mathematical tools of Operations Research (OR). When facing a real life problem the OR practitioner should be able to create a mathematical model that represents his/her problem, and then use mathematical techniques to resolve the model and analyze the optimum solution. The learning objectives of this course include the introduction of optimization thinking and its importance in competitive business management. Also, training on technological tools to solve complex problems will help students in real world applications.                                                                                                                                                                                                                                                                |                                                         |              |

| The objective of this course is to familiarize students with the basic concepts of the various payment instruments used in the financing of imports and exports in Lebanon and deliberately moving towards banking instruments of international payment and the use made of it. They will be exposed to: documentary credits, standby letters of credit, documentary collections and bank guarantees internationally. The course also visits important issues such as the sales contract, the terms of international sales, checks, bank transfers and commercial papers.                                                                                                                                                                                                                                                                                                                                                                                    |                                                         |              |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                               |              |

| This course tackles the use of statistical techniques in the elaboration of a methodological protocol. It supposes that students have already completed the course on elementary statistics, statistic tests and poll theory. It mainly aims at joining theoretical thinking to empirical practice. It also summarizes the main actions of the researcher in management and focuses on the meaning of these acts: what does a hypothesis mean? What is a measure? What does the elaboration of a fact mean? What about a model? An important part of this course is assigned to longitudinal data processing.                                                                                                                                                                                                                                                                                                                 |                                               |              |

| A professional report should be based on the professional mission of a firm. By mobilizing the knowledge that has been acquired in one or two courses, the report should highlight the capacity of the student to conduct an analysis in relation to a practical problem. The report should not be limited to a description of the enterprise but should have a point of view and include an analytical dimension, which promotes solutions, offer recommendations and show adapted measures.                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                               |              |
| <b>BUS689</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Research Methodology in Business</b>       | <b>3 cr.</b> |
| This course aims to help, to prepare, to conduct and present a research project, with the help of numerous concrete examples. This course is based on the main stages of the realization of a research project. It is similar to a report of research since the authors' researches are introduced through this course. Not only the book offers guidance and examples to develop a research project but it also serves as a model for the presentation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                               |              |

| This course tackles the main skills allowing the student to understand, assess, conduct and write a research in social sciences in general and business sciences in particular. In fact, the course consists of a general introduction aiming at developing research stakes, foundations and techniques in management sciences, provided that students deepen their reflection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                               |              |

| The professional report should be based on a professional mission of a firm. By mobilizing the knowledge that has been acquired in one or two courses, the report should highlight the capacity of the students to conduct an analysis in relation to a practical problem. The report should not be limited to a description of the enterprise but should have a point of view and include an analytical dimension, which promotes solutions, offers recommendations and shows adapted measures.                                                                                                                                                                                                                                                                                                                                                                                                                              |                                               |              |

| The course enables students to acquire a practical method to solve problems using the C++ programming language. It includes: applications of the C++ language, basic concepts of the language, types, expressions, control structures (selection, repetition), one and two dimensional arrays, strings, functions, prototypes, and text files. This course is done entirely in the lab, and emphasizes the practical approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                               |              |

| The course enables students to acquire a practical method to solve problems using the C++ programming language. It includes: applications of the C++ language, basic concepts of the language, types, expressions, control structures (selection, repetition), one and two dimensional arrays, strings, functions, prototypes, and text files. This course is done entirely in the lab, and emphasizes the practical approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                               |              |

| This course introduces the concept of event-driven programming and the windows environment. The classes begin with simple forms (Windows) and end with ADO.Net Objects which connect Databases to the VB.Net application, graphics programming. The course also covers Text and Binary file access and the Winsock control for networking.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                               |              |

| This course aims to introduce the basics of computer networks. This studies infrastructures, features and network topologies, transfer techniques, switching, encoding, transmission and routing, the reference model, the protocols of different layers, including deepening the study on the TCP / IP architecture used in the internet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                               |              |

| In the beginning of the semester, students need to set up with their instructors a title and a detailed description of their projects. The instructors of all the sections of the courses will meet within the first three weeks of the semester. During this meeting they will accept, reject, or modify the proposed project. If the project was rejected they need to propose to the student another one. After this meeting, the proposal of every project will be signed by the student as well as the instructor. Instructors need to meet with students at least once every two weeks. During this progress meeting, students need to show the instructors what they did during the two week period and what they are planning to do in the coming two weeks. By the end of the semester, students will have a 10 to 15 minutes presentation. During this presentation instructors from other sections may be present. |                                               |              |

| The main objective of this course is to provide students a general description of business corporations especially under the Lebanese legal system. We address in particular the laws of merchant, business concern, partnership, and corporations. However, our approach is based on a functional perspective of the law. Thus, we attempt to ask how these legal structures function to produce desired benefits to parties who enter into relationships, or how rules can affect sensible business organization.                                                                                                                                                                                                                                                                                                                                                                                                           |                                               |              |

| <b>ECO222</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Macroeconomics</b>                           | <b>3 cr.</b> |
| This course gives an insight into macroeconomics, portraying the economy as a whole. It is by developing an understanding of fundamental economic terminology, and concepts and principles that we are able to interpret economic changes and their impact on a country's situation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                 |              |

| <b>Pre-requisite</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | ECO222                                          |              |
| This course aims at expanding knowledge in economics with an emphasis on accounting, financial intermediaries, banking and their public policies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                 |              |
| <b>ECO600</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Macroeconomics and Public Policy</b>         | <b>3 cr.</b> |
| This course is designed to provide students with an advanced understanding of macroeconomic concepts and models used in economic and policy analysis. It elaborates on the main macroeconomics topics including national income, money and inflation, unemployment, business cycles and economic growth. The course also discusses government economic policies and their implications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                 |              |
| Some of the questions that we examine include: Why are some countries doing so much better than others? What leads to persistent inflation and how can hyperinflation arise? What are the causes and consequences of global imbalances? What determines exchange rates? What are the causes of business cycle fluctuations and what are their implications for financial markets? What is the role of fiscal and monetary policy?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                 |              |

| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ENG140                                          |              |
| This course is designed to upgrade student proficiency in the English language. It offers guidance in critical reading and instructions in writing to develop clear, well organized prose. It emphasizes the writing process with an introduction to rhetorical strategies, such as compare and contrast, cause and effect, and argument, through the integration of the four language skills (listening, speaking, reading and writing).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                 |              |

| The study of communication theory and its application to business is the main focus of this course. Emphasis is placed on composing basic forms of business communication, including correspondence and reports. Attention is also given to the ethical objectives of communicating in the managerial environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                 |              |

| Due to the important revolution that took place in the financial markets in the past twenty years, new techniques have been presented in this course for trading purposes and have been tested for efficiency and potential profitability in the market. The content of this course will provide students with the methodology that enables them to tackle a variety of econometric models with a direct application in the economy as well as in the financial market and facilitates the comprehension of technical instruments through the application of quantitative methods on the financial markets. To that end, a full range of topics in probabilistic statistics and financial modelling will be addressed, given that financial mathematics is a must for all candidates who want to join dealing rooms as quantitative traders and arbitrageurs. Statistical techniques can be employed to test if and how well securities are correlated and, by implication, how well suited they are for arbitrage and trading. The curriculum includes parametric and non-parametric regression analysis, estimation methodologies, forecasting analysis, as well as high frequency pairs trading techniques. |                                                 |              |

| The course herein begins with an overview on many financial instruments in terms of pricing, valuation, and sensitivity analysis. Then it moves to introducing the notion of risk, in particular the identification and measurement procedures. To that end, it elaborates the value at risk methodology to quantify all types of risks that exist in the financial market for a variety of instruments and structured products, all based on advanced statistical approaches with empirical analysis implemented on excel and Matlab. Subsequently, the Value at risk metric is undertaken on a portfolio level which enables to run inclusive optimization with ideal weights allocation amongst different asset classes trying to weigh up the risk/return perspectives. Finally, it went through Asset -Liability management for banks and financial institutions with more emphasis on Interest Rate, Foreign Exchange, and Liquidity Risk.                                                                                                                                                                                                                                                               |                                                 |              |
| <b>FIM590</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Fixed-Income Markets</b>                     | <b>3 cr.</b> |
| This course emphasizes on the structuring of interest rate-based products, in order to understand the sensitivity concepts for hedging purposes. It will handle both duration and convexity in a quantitative approach and their implications on duration neutral strategies. An introduction to short- and long-term futures is a must to help understand the Basis of fixed income derivatives. A software that prices any collection of cash flows by generating a discount function will be designed and used to replicate bond index trackers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                 |              |
| <b>FIM600</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Global Macro Analysis</b>                    | <b>3 cr.</b> |
| This course introduces the concept of technical analysis and charting. Studies performed on historical charts show recognizable and tradable patterns that enable the student to put on trades. There will be a special emphasis on Elliott and Gan theory. The course also prepares students to submit the chartered market technicians' certificate (CMT).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                 |              |

| This course aims at analyzing historical data in graphs in order to find tendencies, support and resistance points. In addition, pricing and the future evolution of prices will be tackled. Furthermore, tendency indicators and oscillators will be introduced, as well as the Elliott and Gan theory. An introduction to the economic system as a whole and the way it functions is affected by the behavior of interdependent sectors, which will also be addressed in order for the student to understand and highlight the intrinsic links between financial and macroeconomic cycles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                 |              |

| This course aims to cover in depth the techniques of pricing and valuing interest rates swaps using STIRS and FRAs. All swap structures will be tackled by putting forward both method of comparison swap and zero coupon. Finally, we will use the concept of vanilla swap equivalent position to delta hedge a swap book.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                 |              |

| This course will cover the major aspects of financial Futures for hedging, arbitrage, trading strategies and techniques. A special emphasis on directional v/s spread trading will be introduced to deal with Futures spread trades, yield curve spreads and benchmark over benchmark relative values.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                 |              |

| This course is exclusively dedicated to the study of options; thus, it will enable students to better define option pricing issues within the context of binomial trees and stochastic process. In addition, the course seeks to cover all aspects of implied volatility concepts through the study of cones and surfaces in order to design volatility spread strategies. The dynamic follow up of options portfolio through engaging its Greeks will be stressed on especially for hedge requirements. Acquiring expertise in the valuation of exotic options (barriers, digital, no touch, etc.) is crucial to introduce capital structured notes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                 |              |
| <b>FIM655</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Artificial Intelligence for Finance</b>      | <b>3 cr.</b> |

| This course will cover the major aspects of Machine Learning and Artificial Intelligence for Finance. At the beginning, this course will introduce students to the world of AI by covering the different Machine Learning algorithms from unsupervised learning to supervised learning. We will then explore Deep Learning and neural networks, specifically the Recurrent Neural Networks, which will be used later to deal with financial data. Towards the end of the course, students will learn about the different applications of Artificial Intelligence in Finance and how to apply deep learning methods to solve finance problems such as forecasting, credit rating and others.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                 |              |

| This course aims to give the students the ability to identify the risk reward equilibrium through contingent claims, vanilla and exotic products. A deep understanding of the major options profits will be dealt with in order to give students the ability to combine traditional assets with contingent ones to create customized structured products. Most of the structured notes available in the market will be subject to thorough examination in relation to their structure and profile (Best of; double no touch) ranging from equity linked to FX assets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                 |              |

| The evaluation of the health of a business is an essential component of financial analysis. Shareholders, creditors, and managers are questioning the value establishment by the company. Techniques and appropriate methods help them to form their opinion. Consequently, the content of this course follows an approach that is based on the annual accounts, including the study of the income statement, the study of time record, plus the study of changes in positions between two periods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                 |              |

| This course introduces the concept of a portfolio approach to investments. The needs of individual and institutional investors are each examined, along with the range of available investment solutions. The three main steps in the portfolio management process (planning, execution, and feedback) are outlined. Common measures of portfolio risk and return and the introduction of modern portfolio theory—a quantitative framework for asset pricing and portfolio selection—then follow. Furthermore, the course introduces the portfolio planning and construction process, including the development of an investment policy statement (IPS). A discussion of risk management, including the various types and measures of risk, follows, and a risk management framework is provided. Technical analysis, a set of tools that uses asset price, trading volume, and other similar data for making investment decisions, is then examined. The session concludes with coverage on how financial technology (fintech) is impacting areas within the investment industry, such as investment analysis, automated advice, and risk management.                                                                                                                                                                                                                                                                                                                                                |                                                 |              |
| <b>FIN412</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Corporate Finance and Ethics</b>             | <b>3 cr.</b> |

| This course provides an introduction to corporate governance, investing and financing decisions. An overview of corporate governance is presented along with a framework for understanding and analyzing corporate governance and stakeholder management. The growing impact of environmental and social considerations in investing is also highlighted. Capital budgeting and the assessment of capital investments are covered next. Furthermore, this course covers how companies make use of leverage and manage their working capital to meet short-term operational needs. The various types of leverage (operating, financial, and total), measures of leverage, and how leverage affects a company's earnings and financial ratios are examined. A discussion then follows on the different types of working capital and the management issues associated with each. Techniques for assessing the effectiveness of working capital management are also examined. Students will be also introduced to the concept of ethics, related challenges to ethical behavior, and the role played by ethics and professionalism in the investment industry. A framework to support ethical decision-making is provided to help guide behavior. The CFA Institute Code of Ethics and Standards of Professional Conduct (Code and Standards) are examined, with attention given to each standard and its application. The course concludes with coverage of the Global Investment Performance Standards. |                                                 |              |

| This course provides a conceptual framework that can be used to understand how recent events have affected the financial environment. Each type of financial market is described with a focus on its utilization by financial institutions, its internationalization, and recent events that have affected it. It will also cover the different economic causes and risk factors of the foreign exchange for enterprises, financial institutions, and households.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                 |              |

| This course provides a structural overview of financial markets and their operating characteristics. Overview markets include equities, fixed income, derivatives, and alternative investments. Various asset types, market participants, and how assets trade within these markets and ecosystems are also described. Furthermore, this course focuses on the characteristics, analysis, and valuation of equity securities. In addition, this course presents the more widely used alternative investments, including hedge funds, private equity, real estate, commodities, and infrastructure investment along with their characteristics, considerations for valuations and their potential benefits and risks. You will also be introduced to the concept of a portfolio approach to investments. The needs of individual and institutional investors are each examined, along with the range of available investment solutions. This course aims to prepare students to sit for the CFA level 1 exam in the following topics: equity investments and alternative investments.                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                 |              |
| <b>FIN423</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Fundamentals of Fixed Income Markets</b>     | <b>3 cr.</b> |

| <p>This course introduces the unique attributes that define fixed-income securities, then follows with an overview of global debt markets. Primary issuers, sectors, and bond types are explained. Key concepts for the calculation and interpretation of bond prices, yields, and spreads and coverage of interest rate risk and key related risk measures are presented. Securitization—the creation of fixed-income securities backed by certain (typically less liquid) assets—including the various types, characteristics, and risks of these investments are also treated. Furthermore, the course examines the fundamental elements underlying bond returns and risks with a specific focus on interest rate and credit risk. Duration, convexity, and other key measures for assessing a bond’s sensitivity to interest rate risk are introduced. An explanation of credit risk and the use of credit analysis for risky bonds concludes the course.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                        |              |

| <p>This course introduces the principal information sources used to evaluate a company’s financial performance. Primary financial statements (income statement, balance sheet, cash flow statement, and statement of changes in equity) in addition to notes to these statements and management reporting are examined. A general framework for conducting financial statement analysis is provided. Furthermore, this course addresses the three major financial statements—the income statement, the balance sheet, and the cash flow statement—by examining each in turn. The purpose, elements of, construction, pertinent ratios, and common-size analysis are presented for each major financial statement. Moreover, the course examines financial reporting for specific categories of assets and liabilities. Inventories, long-lived assets, income taxes, and non-current liabilities are examined in greater detail because of their effect on financial statements and reported measures of profitability, liquidity, and solvency. In addition, the course introduces the concept of financial reporting quality. It examines the financial reporting quality differences that may exist between companies and the means for identifying them. Warning signs of poor- or low-quality reporting are covered. The application of financial analysis techniques to evaluate a company’s past and projected performance, assess credit risk, and screen for potential equity investments follows. Common adjustments to reported financials to facilitate cross-company comparisons conclude the course.</p> |                                        |              |

| <p>The course enables the students to understand the main derivative products traded on financial markets (futures, forward contracts, options and swaps), as well as their use for hedging, speculation and arbitrage. They also acquire practical knowledge on the mechanics of organized markets and learn how to price a derivative: forward price calculation, premium calculation, P&amp;L calculation, and NPV calculation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                        |              |

| <p>This course focuses on key principles of technical analysis necessary to make successful investment decisions. Individual investors and traders are increasingly recognizing the importance of technical analysis in decision-making. With the advancement of the technical analysis profession, many sophisticated techniques have also developed. This course, which revolves around price analysis, will provide students the basic knowledge to read charts and identify specific patterns and shapes. This includes how to identify the right price to enter and exit the financial markets to maximize profits in several asset classes (FX, equities, bonds, futures, commodities, ETF, etc.).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                        |              |
| <b>FIN600</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Applied Corporate Finance</b>       | <b>3 cr.</b> |
| <p>In this course, students will acquire more advanced knowledge related to corporate finance main decisions: investment decisions, financing decisions and dividends policies. This course teaches students how to implement these decisions in specific contexts such as SME context (small and medium enterprises) and develops a critical analysis of the concepts and traditional tools of corporate finance.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                        |              |

| <p>The purpose of this course is to provide students with the theory and practice of pricing and hedging derivative securities. These include forward and futures contracts, swaps, and many different types of options. The course covers diverse areas of derivatives, such as equity and index derivatives, foreign currency derivatives and commodity derivatives, as well as interest rate derivatives. The course emphasizes the study of derivatives from the point of view of industry practitioners, how derivatives are used in portfolio management, and in hedge fund strategies. The course is aimed at providing students with a practical and intuitive understanding of derivatives.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                        |              |
| <b>FIN655</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Portfolio Management</b>            | <b>3 cr.</b> |
| <p>This course covers the various theoretical and practical aspects of the quantitative portfolio management. It sheds light on the implication of theories, notably in the course of “Capitals Market Theory” at the level of investment policies and performance measure. Great attention is given to portfolio management and active strategies. Furthermore, students will be aware of the themes related to investment policies (objectives, constraints), asset allocation, assessment and performance. Global and mandatory management along with the use of derivative products for insurance and coverage objectives will be examined as well.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                        |              |
| <b>HEC510</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Fundamentals of Management</b>      | <b>3 cr.</b> |
| <p>The course explores the economic, political, social and cultural challenges that pertain to any organization, thus introducing participants to the world of the manager. It covers the basic functions of management, namely strategic planning, organizing and structuring, and leading and controlling. In the process, students will be exposed to the challenges of international and intercultural management, innovation, management of creative enterprises and knowledge management. The course reviews different aspects of existing organizations, such as marketing, finance, accounting and human resources. New issues introduced include sustainable development, corporate social responsibility, corporate ethics and governance.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                        |              |
| <b>HEC520</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Decision Support Model</b>          | <b>3 cr.</b> |
| <p>The course objective is to present quantitative tools used in practice to support decisions, as well as the management situations to which they apply. Using stylized cases, students will learn to recognize several types of decision-making problems, express them as mathematical models and identify the appropriate techniques to solve them. Special attention is given to prescriptive models, which help identify the best management decisions. At</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                        |              |

the end of the course, students will have gained a basic knowledge of the main techniques involved for these decision support models. This will allow them to deal with current problems of decision-making with the help of specialized software attached to Microsoft Excel.

**HEC525 Human Resource Management 3 cr.**

The underlying premise of the course is that Human Resources Management (HRM) is a responsibility shared by both HR specialists and the managers of firms. HRM is viewed as a key component of business strategy and as a potential source of competitive advantage. The course highlights the numerous challenges facing today's firms: growing pressures for continuous productivity improvement, better quality goods and services, more flexible production systems and changing employee expectations. These pressures are straining the traditional HRM model and leading to a realignment of HR practices and the restructuring of relationships among the firm's major players, including executives, managers, employees and unions. This course is designed for managers, as they often do not have access to a human resources department, but must still manage human resources in all activities ranging from planning, recruitment and selection to performance evaluation, compensation and development of competencies.

**HEC530 Marketing 3 cr.**

Marketing is an applied science built on the foundations of economic, behavioral and management sciences. It is associated with a large number of topics, concepts, theories and examples. The objectives of the course are to demystify the terminology, concepts and theories, to understand and apply marketing management principles, and to develop the analytical and decision skills required in a competitive marketplace. The course will present this material within a systematic framework so that students will be able to link the different subjects and understand the relationships between marketing research, consumer behavior, market segmentation, targeting, product positioning, distribution channels and promotion alternatives.

**HEC540 Basic Corporate Finance 3 cr.**

The course will focus on the problems a financial manager faces. In particular, students will examine how to obtain adequate funds to allow a firm to operate and how to decide on their optimal allocation. To obtain funds, the financial manager must participate in markets for debt and equity securities. Thus, we will discuss how these markets work and how they can be most efficiently used by the firm. In allocating funds, we will learn how to assess the economic benefits of long lived projects and how to make optimal choices between projects. We will also spend time developing basic financial tools that will assist us in the decision-making process.

**HEC550 Accounting Information 3 cr.**

Managers make decisions based on various sources of information, one of which is the accounting system that produces financial information. The end products of this system are financial statements prepared according to a standardized set of rules. The first part of the course is designed to give students a general knowledge of the most important international standards used in financial reporting. The second part of the course focuses on management accounting. A key role for management accountants is to establish the control systems used to achieve organizational goals and minimize risks. One of the most important of these is budgetary control, a powerful tool that encourages planning, sets milestones, evaluates performance and suggests paths for improvement. The objective of this part of the course is to help students understand the role and functioning of the budget.

**HEC555 Business Strategy 3 cr.**

Business firms face constant pressure in a rapidly evolving competitive environment. Succeeding in this context requires an understanding of strategies and of the needs to reinvest in the firms' strategic position. Two main objectives are pursued in the course. First, to introduce students to the fundamentals of strategy, for instance its formulation and its implementation. Building on these foundations, the second objective is to gain a thorough understanding of strategy execution. Two approaches will be favored: case studies to illustrate the foundations of business strategy, and a simulation to put students in a position to strategically manage an organization. This simulation allows them to raise issues related to the formulation, implementation and execution of the strategy.

**HEC670 Management Change 3 cr.**

Contemporary organizations have to deal with rapidly changing environments. The globalization of the economy forces organizations to seriously reconsider the design as well as the deployment of the organization itself. Public as well as private organizations throughout the world are living laboratories of this phenomenon. Confronted with market deregulation, privatization, global competition, achievement of world-class practice and rapidly changing technologies, institutions that want to survive in their field must adjust constantly. This adjustment requires that private companies and even state-owned companies constantly re-examine the chosen organizational models. They are more and more confronted with reorganizations, new partnerships, out-sourcing and all other types of organizational transformation. Moreover, it becomes evident that this redeployment of organizations goes far beyond their simple reconfiguration. It requires that managers of these organizations develop specific competencies concerning the implementation of major changes. These changes often have significant social and political effects, which managers must be able to identify and handle.

**HEC675 Theories and Practices of Negotiations 3 cr.**

The course is an introduction to negotiation as a management tool used by individuals in and between organizations. It focuses on learning the main models of negotiation. The primary goal of this course is to give an opportunity to critically evaluate current strengths and weaknesses in relation to negotiation so that students can develop a personal toolkit of effective negotiation skills, strategies, and approaches. A related aim is to provide them with a broad intellectual understanding of concepts central to the scientific research on negotiation. In concrete terms, the students will be required to experience negotiation within various contexts.

**HEC680 International Management 3 cr.**

Students who intend to work in the area of trade and international business development must have some essential points of reference in order to achieve a successful career. This course is intended to provide students with these essential points of reference. As such, its objectives for students are: to understand the international business environment in which firms operate, to evaluate opportunities and challenges faced by firms in the global and competitive environment of prominent emerging markets in which domestic and multinational firms currently operate, to analyze national and international policies with regard to globalization, trade and firm growth, to differentiate between domestic and multinational business strategies, to understand the important place of consensus in international business, and to develop a corporate social responsibility policy in this context. This course will help students achieve these objectives; concrete cases will be presented in order to facilitate their understanding of the fundamental concepts taught in the course.

**HRM515 Understanding the Business Environment from an HR Viewpoint 3 cr.**

The purpose of this course is to deal with accounting and financial tools for HR while understanding the structure of a profit and loss account, and assessing the impact of accounting decisions in human resources. It is also about introducing students to Enterprise Resource Planning Systems. Furthermore, students will learn the concept of corporate strategy, and how to develop intercultural competences in multicultural teams while thoroughly focusing on organizational knowledge to help create and maintain learning organizations.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                        |              |

| <b>HRM530</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Attracting and Selecting People</b>                                 | <b>3 cr.</b> |
| The objective of this course is to show how HR professionals and top managers can construct and maintain a high- performing workforce. Students will learn, within this context, the best practice for attracting and selecting well -qualified talented employees. They will also be introduced to the best ways for achieving strategic objectives and obtaining better and stronger results through people.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                        |              |
| <b>HRM540</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Developing People</b>                                               | <b>3 cr.</b> |
| This course encourages students to think strategically about talent and career development, through competencies management and Performance appraisal techniques as used by international companies. The course will also involve a discussion about the range of successful practices and contexts related to the HR corporate Marketing strategy as derived from research and experience. Students will also be given the opportunity to reflect on what is expected from HR practitioners with regards to installing a collaborative culture based on the principles of collective intelligence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                        |              |

| This course aims to enhance group cooperation, foster collaboration and develop new approaches to team work. It is about getting to know each other by using new approaches, exploring methods of cooperation, stimulating fluidity in team work, and gaining empowerment, freedom, and creativity. It also introduces students to organizational behavior (theory and practice), to leadership and to top team management skills.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                        |              |

| The idea of this course is to discuss and share experiences of HR Information Systems from a user point of view. The HR function is responsible for providing reliable and relevant data in the decision-making process. Future HR managers will have to deal with HRIS on a daily basis, which requires understanding how these systems support HR strategy. Students will also learn how to differentiate between information and knowledge to define organizational learning, and to identify main factors driving companies and society to learn and better manage knowledge.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                        |              |
| <b>HRM580</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Mastering the Legal Context</b>                                     | <b>3 cr.</b> |
| This course seeks to provide students with a broad overview of individual and collective labor laws and national legal systems. Within this context, students analyze case studies given by HRDs and lawyers. They are also introduced to negotiation theory, crisis management and social conflicts, and employee relations in Multinational Enterprises. (MNE).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                        |              |

| The objective of this course is to provide a broad overview of the industrial system in Europe, its complexity and evolution, and offers the opportunity for students to run a European work council. It also seeks to help students to negotiate in a group and within a multicultural context. This aspect of the course also encompasses a broad overview of the main issues governed by European Labor Law, such as the Council of Europe and European Union Law.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                        |              |
| <b>HRM630</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Introducing the Research Methods and Literature of the HR Field</b> | <b>3 cr.</b> |
| This course aims to help, to prepare, to conduct and present a research project, with the help of numerous concrete examples. This course is based on the main stages of the realization of a research project. It is similar to a report of research since the authors' researches are introduced through this course. Not only the book offers guidance and examples to develop a research project but it also serves as a model for the presentation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                        |              |

| This part of the course encompasses several interactive seminars and lectures given by international experts on various themes, with an emphasis on entrepreneurship, compensation and benefits, ethical issues in transnational firms, diversity management in the workplace, and equity practices. Such seminars and lectures will be conducted through group work and discussions with lecturers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                        |              |

| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | CSC204                                                                 |              |
| This course is dedicated to exploring the characteristics of data to enable students to design a database and use these characteristics to solve common business problems. Students will also learn how to design database components (tables, forms, queries, reports and macros) by using Microsoft Access as a tool. In addition, they will acquire the skills to create and maintain database information, including sorting, indexing, and relating tables. Students will think about data input and retrieval, and how it is displayed and manipulated in order to create a useful, efficient, and coherent design. Since this is an application oriented course, no access programming code is expected from the students.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                        |              |

| This course provides a basic understanding of eBusiness, mainly over the internet. It introduces the types of eBusiness and its various revenue models, and the driving technologies, as well as the driving sociocultural and environmental aspects behind the increase in demand for eBusiness. The course gives students a good foundation in understanding the potential of eBusiness without neglecting the challenges it faces. Both technical and strategic aspects of eBusiness are discussed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                        |              |
| <b>ITB455</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Enterprise Simulation - ITB</b>                                     | <b>2 cr.</b> |

| Increasingly organizational survival and/or efficiency are related to the ability to acquire and maintain excellent information about itself and competing organizations. Information treated as a resource for strategic planning and operational management has a value like other assets in the organization. Once information is placed in the proper perspective, management issues regarding all the departments and units of the entity become strongly handled. More than ever there appears a need for faster access to critical information by all of the decision makers to make better decisions. The impact of information technology (IT) on firms' performance and efficiency has been repeatedly stated. Firms have found opportunities to use IT in products and processes to reduce costs and increase product value, as well as to improve organizational effectiveness, through enhanced coordination, communication and control. It is claimed that these uses have allowed firms to gain competitive advantages over other firms. All levels of management have the burden of insuring that appropriate information systems are in place to bring about a productive profitable organization. Therefore, this course will explore necessary management actions which will ensure that information is available, correct, manipulatable, protected, and archived in proper forms. |                                                                        |              |

| This course offers a comprehensive tour of the fascinating areas of the hospitality industry. Some of the topics that will be covered in this course include the concept of service, the lodging industry, the restaurant business, institutional foodservices, tourism, gaming entertainment, leisure and recreation. Students will be introduced to the basic managerial functions and how they relate to the hospitality industry. The course also familiarizes students with career opportunities and introduces them to large hospitality organizations and companies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                        |              |

| This course covers the basic functions of food and beverage services, and introduces students to a servers job, types of establishments, and different types of service. Some current issues, such as embracing diversity, preventing harassment, and maintaining a drugfree work environment are also discussed. The course covers both theoretical and practical aspects of food and beverage services, and apart from attending lectures in the classroom, students will be practicing and participating in real life service.                                                                                                                                                                                      |                                             |              |

| This practical course aims to introduce the students to the world of culinary food. Therefore, students will learn the basic international food and pastry recipes that enhance that culinary knowhow and integrate them to the world of gastronomy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                             |              |

| The main purpose of this course is to acquaint students with basic knowledge about beer, cider, mead and sake. It explains the distillation process and the five basic spirits: whisky, gin, vodka, rum and tequila as well as the national drink: arak. Students will learn how to successfully manage a bar and how to avoid squandering.                                                                                                                                                                                                                                                                                                                                                                            |                                             |              |

| This course provides a fresh and realistic approach to the control and management of resources in the challenging hospitality industry. This creates an immediate awareness within the student that success in the hospitality industry is challenging and that resources must be controlled and used for their intended purposes if an operation is to be successful. This course mirrors the financial aspect of the food and beverage operations, the methods to be used for an efficient control process and the strategies to be adopted when pricing any product.                                                                                                                                                |                                             |              |

| This course aims at shedding light on the areas of food safety, and employee health and safety in the hospitality industry. Students will be prepared to face the challenge of food safety management as this is considered essential in this type of business. More specifically, this course will give the students hygiene and sanitation methods and principles as should be applied in the market and will introduce them to the practical implementation of the current food safety management systems such as HACCP and ISO 22000:2005. Moreover, they will learn the principles related to the health and safety of employees in the workplace so as to make their organization more productive and efficient. |                                             |              |

| This course allows students to apply knowledge and skills acquired at the University in a real life setting. The main goal is to obtain hands-on experience necessary to qualify for a good entry-level position in hotel, restaurant, or food service management. Moreover, students will learn how to create and write a professional report with an emphasis on their experience in the hospitality industry. The course is practical and theoretical in the sense that students will participate in theoretical classes at the University and at the same time partake in a training program at a recognized hospitality establishment.                                                                            |                                             |              |

| This course offers the essential managerial tools to plan, organize, lead and control an effective and efficient food and beverage operation. Reflecting the financial aspect of the food and beverage operation, this course covers not only the financial management of the food and beverage exercise but also tackles the operational side inclusive of the service, the production and the stock flow cycle. A fresh and realistic approach to facilities management and to the allocation of resources in the challenging hospitality industry is shown to ensure the success of the exercise.                                                                                                                   |                                             |              |

|                       | This course takes the student step by step through the complicated process of creating and opening a restaurant starting from generating or modifying a restaurant concept, to developing a menu, a staff of personnel and a market plan. In addition, this course is designed to address the complex operation of catering. The focus is on two major areas: the off premises and on premises catering for business functions and the management of large scale and special events. Along the way, the course gives a comprehensive picture of what the restaurant business will be about, and the same for events management.                                                                                                                 |              |

|                       | This course introduces students to the strategic management process with a focus on the hospitality industry. Students will learn about the external environment and stakeholders, and how these impact on an organization. Moreover, students will become familiar with how to perform an internal analysis of a company, and how to formulate and implement strategies at different levels within the organization. The course will focus on global strategic management issues and introduce students to topics such as market entry tactics, international market selection, and stakeholder management in foreign environments.                                                                                                            |              |
| <b>LCB400</b>         | <b>Facilities and Property Development Management</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>3 cr.</b> |

|                       | This course will provide an overview of general protocol and etiquette in the hospitality industry. Students will learn about soft skills and social intelligence, correct behavior, and proper communication techniques as they apply in the real world. The course will also cover topics such as international etiquette, presentations and public speaking, as well as conflict resolution with a focus on the hospitality industry. It is an interactive course in which role plays and class participation are important aspects.                                                                                                                                                                                                         |              |

|                       | This course acquaints the students with the operations and procedures of the rooms division department of a hotel. Some of the topics covered in this course include hotel organization and interdepartmental communications, property management systems, reservations, revenue management, security issues, executive housekeeping, and environmental management and sustainability. The purpose of the course is to enable students to develop knowledge and skills necessary to control, supervise and manage the front office, housekeeping and security departments within the rooms division of international hotels or resorts.                                                                                                         |              |

|                       | Organizational behavior is the study of actions and attitudes that people exhibit within the organization and their impact on the organization. The effective design and management of organizations require the thoughtful application of knowledge concerning the behavior of people at work.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |              |
| <b>MGT325</b>         | <b>New Venture Creation</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>3 cr.</b> |
| <b>Pre-requisite</b>  | MGT220                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |              |
|                       | The New Venture Creation Course equips the students with knowledge to start their own business through validating their ideas and developing their business model and prototype. Students will be exposed to seasoned entrepreneurs and experts over the course period and will have to spend office hours at ACIE interacting with mentors to refine their work. The expected outcome is a validated business idea, pitch deck and a prototype.                                                                                                                                                                                                                                                                                                |              |
| <b>MGT330</b>         | <b>Human Resources Management</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>3 cr.</b> |

|                       | This course provides students with the basic principles and theories of human resource management. It expands on the five functions of human resources management: staffing, training and development, safety and health, compensation and benefits, and employee labor relations. This course is the foundation for students majoring in human resource and the course material is translated into practice through relevant discussions of the topic at hand and an analysis of cases, thus requiring a logical integration of learning to the business context. Lectures are used to introduce the key concepts and theories, and articles and cases provide an opportunity to clarify and reinforce students' understanding of the subject. |              |
| <b>MGT335</b>         | <b>Technology and Innovation Management</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>3 cr.</b> |
| <b>Pre-requisite</b>  | MGT325                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |              |

This course addresses the role of innovation for macro and micro levels, while focusing on practices and processes to successfully manage it. Three aspects of innovation will be studied: exploration, execution, and exploitation. The course will focus on entrepreneurial firms (start-ups and established firms) to analyze success and failure cases of innovation. It provides good grounding in technology and innovation management for students interested in becoming entrepreneurs or managers in innovation-driven firms.

**MGT400 Supply Chain Management 3 cr.**

**Pre-requisites** MGT220

Logistics and supply chain management is unique and, to some degree, represents a paradox because it is concerned with one of the oldest and also the most newly discovered activities in business. The supply chain system activities of communication, inventory management, warehousing, transportation, and facility location have been performed since the start of commercial activity. It is difficult to visualize any product that could reach a customer without logistical support. Yet it is only over the last few years that firms have started focusing on logistics and supply chain management as a source of competitive advantage. There is a realization that no company can do any better than its logistics system. This becomes even more important given that product life cycles are shrinking, and competition is intense. Logistics and supply chain management today represents a great challenge as well as a tremendous opportunity for most firms.

**MGT405 Project Management 3 cr.**

**Pre-requisites** BUS410 And ENG240

This course identifies specific challenges facing the project manager and explains how to address those challenges. It will take the students, step by step, through the life cycle of a project, explaining how projects exist, how they are planned, how they are executed and controlled and how they must be formally closed. It is based on the Project Management Framework Version 4 of the Project Management Institute (PMI).

**MGT415 Small Business Management 3 cr.**

**Pre-requisites** MGT220

This course focuses on recognizing a business opportunity, starting or acquiring a business based on the recognized opportunity, and operating that business. Entrepreneurship is necessary not only for students who will become entrepreneurs, but also for individuals working in the increasingly competitive corporate world.

**MGT420 Strategic Planning 3 cr.**

**Pre-requisites** FIN310 And MGT220

This course will take the students on a journey where they will learn to analyze a company's business environment, select a strategy, and construct the organization structure necessary to put the strategy into action. The course will allow students to bring together all of their learned functional skills, such as accounting, finance, and marketing, etc., and use them to study organizational problems within the context of real world business case studies.

**MGT455 Enterprise Simulation - Management 2 cr.**

**Pre-requisites** MGT420

This course is specifically designed for the upper-level undergraduate students in Management. During this course, students will be asked to handle several virtual situations pertaining to international companies in which immediate managerial actions are required.

**MGT460 Entrepreneurial Finance 3 cr.**

**Pre-requisite** FIN310 And MGT335

Entrepreneurial finance is a course introducing the basics of financial management adapted to start-ups and early-stage ventures, where companies are young and not all finance topics are important, while others are crucial for the venture's survival into mature firms. The course also covers fundraising and valuation: how does a start-up undergo multiple rounds of funding until it becomes fully commercial and profitable, how does it value itself during every round and what are the main documentation that govern the process. The course investigates the specific case of Lebanon's venture capital ecosystem as well as regional and global ones, so as to understand how an entrepreneur can go from a bright idea to a viable and stable enterprise.

**MGT520 Corporate Governance and Business Ethics 3 cr.**

This course aims at familiarizing students with managerial and financial theories of governance as well as recent developments concerning the responsibilities of administrative bodies at the level of corporate governance. Additionally, it enables the students comprehend the various ethical and managerial approaches by providing them with insights on the organization as part of the community and the behaviors of the managers that have a great impact on the performance of the organization. After completing this course, students will be able to play various roles related to the effective functioning of the administrative body of several organizations as well as generate ethical and social culture decisions in their scope of work.

**MGT620 Strategic Management and Decision-Making 3 cr.**

This course is based on a multidisciplinary approach of strategic management that enables students to understand the decision-making nature in various strategic contexts, formulate and implement affair strategies and integrate functional policies in strategic problems resolution. The course presents the fields of activities in which the enterprise seeks to integrate. It also tackles the subject of resources allocation to enable enterprises to preserve a strong and defensible position, and to progress in the sector(s) it currently occupies, or seeks to occupy, with a view to maximize invested capital profitability.

**MGT640 Theories and Practices of Negotiation 3 cr.**

This course enables the student to acquire the competencies and the basic theoretical and practical techniques needed to be an influential negotiator, and to carry out and manage the negotiation process. This course covers negotiation theories in association with relational models of behavior in negotiations, which have been developed through cognitive and behaviorist theories and the science of decision making. Many exercises, study cases and real simulations will be done in order to apply the theoretical and practical concepts.

**MIS320 Quantitative Techniques Applied to Business 3 cr.**

**Pre-requisites** STA220

Business quantitative methods help students understand the business world better, so they can search for variables, in order to translate them into mathematical models to help solve them. These methods are used to assist managers in decision-making by performing provisions such as sales, sales turnover, and benefits in an uncertain world as well as helping in testing and assessing decisions with respect to the organization's performance. Furthermore, this course considers linear programming techniques and analyzing decisions in uncertain conditions, as well as helping managers maximize short-term and long-term company profit. This course has a prerequisite course of probability and statistics for engineers. By the end of the course students should have knowledge of Excel and SPSS.

**MKT220 Principles of Marketing 3 cr.**

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |              |

|                       | This course is designed to help the students learn about and apply the basic concepts and practices of modern marketing as they are used in a variety of settings. It is intended for business students who wish to become the decision-makers of tomorrow at the middle or upper levels of management since it gives students a comprehensive and innovative managerial and practical introduction to marketing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |              |

| <b>Pre-requisites</b> | MKT220                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |              |
|                       | Consumer behavior reflects numerous social sciences, such as psychology, anthropology, and sociology. In this course, students will discover and learn how perceptions, memory, learning, personality, and attitudes affect consumption behavior, how consumption changes during one's life cycle, and how powerful cultural and subcultural influences are on consumers. From these aspects, marketers can then properly build their brands to appeal to various customers' needs, and to formulate the adequate marketing strategies that ensure consumers satisfactions and loyalties.                                                                                                                                                                                                                                                                                                                                                                                                                         |              |

| <b>Pre-requisites</b> | MIS320 And MKT310                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |              |
|                       | The purpose of the course is to introduce students to the role of marketing research and to the process of marketing research. The emphasis in this course is on how to actually conceptualize and conduct a marketing research project as well as how to use research as an aid for marketing management decisions. A fundamental skill possessed by successful marketing managers is the ability to obtain and use factual information within the managerial decision-making process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |              |

| <b>Pre-requisites</b> | MKT220                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |              |
|                       | This course is designed to introduce students to issues related to the management of a sales program, the role and responsibilities of sales management, and the relationship of the sales management process to the broader issues of managing demand, the marketing process, as well as the distribution channels. This course will focus on the role of the sales manager in developing and implementing strategic and tactical decisions, and on administrating the sales force operations. Moreover, it focuses on building and maintaining relationships with partners in order to establish an effective distribution network.                                                                                                                                                                                                                                                                                                                                                                             |              |

| <b>Pre-requisites</b> | MKT410                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |              |
|                       | Today media planning constitutes one of the most respected, strategic, highly sought after, and very well paid professions in advertising. This course is designed to introduce students to this industry, while aiming to provide a firm grounding in its fundamentals. It will describe the links between media, society, advertising, and business. It will thoroughly investigate the foundations of media planning and check the media planning process in action, based on true business/media/communication problematics. The course will also explore the business aspects of media and media planning through a global industry overview, the media transactions organizations, with illustrations of advertisers, advertising agencies and media agencies. Finally, the course will focus on the Lebanese market realities in order to allow the students to have a practical link with business life and to bridge the gap between the theoretical aspect and the professional side of media planning. |              |

| <b>Pre-requisites</b> | MKT310                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |              |
|                       | This course details the Integrated Marketing Communications (IMC) within the FMCG and consumer service sectors in addition to the business-to-business sector. We will explore IMC's role within the marketing process, consumer behavior, the role of ad agencies, creative strategy, advertising, sales promotion, direct marketing, and electronic commerce. The main objective of this course is to help students understand how different companies communicate with internal and external customers and how communication strategy can facilitate the exchange. By the end of this course, students will have the skills needed to develop an effective communication plan.                                                                                                                                                                                                                                                                                                                                 |              |

|                       | A brand is a company's most visible (intangible) asset in a market. It is the company's main product connection channel with customers who are searching for value in their purchases. Brands are created in the minds of consumers. This perceived value by a consumer of a brand and product results in brand equity. This course will outline the theories and framework that are used to build and manage a brand for the long-term mutual benefits of the consumer and the supplier. Brand equity is the core element of the course, and it will be examined through the strategic brand management process, including: positioning, marketing programs, measuring brand performance, and product lines.                                                                                                                                                                                                                                                                                                     |              |

| <b>Pre-requisites</b> | MKT220                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |              |
|                       | The marketing services and retail management course presents an integrated approach to studying services that places marketing issues within a broader general management context. This course is suitable for students who are interested in learning more about the problems and possibilities related to the marketing of service companies, and other service organizations. In addition, it introduces the basics of retail management, which will introduce students to retailing theories, retailing operations, and the vital aspects of retail management at both the strategic and operational level.                                                                                                                                                                                                                                                                                                                                                                                                   |              |

|                       | Price is the most sensitive marketing element in the supplier customer relationship. It has an immediate and direct effect on a company's bottom line, and it's perceived by the customer as a signal of the value of a product offering, thus strongly influencing his/her purchase decisions. The course will introduce the participants to various strategies and steps that are used by companies for pricing their offerings. The notion that "price equals perceived value" is the basis of this course. The process of establishing price and value, and the importance of communication under different product and market conditions, are presented in detail. The framework of the course will follow the concept of the "Pricing Pyramid". Practical examples, through real life case studies, will be employed to assist participants in a deeper understanding of the strategies behind pricing decisions.                                                                                           |              |

| The main objectives of the course are to explain to students the specific and original marketing contribution to the company's management and give them the opportunity to use the strategies and apply the main concepts relating to the market analysis, including environment, consumers behavior, demand and segmentation. The second part of the course covers various marketing decisions, namely the ones pertaining to mix marketing variables: product, price, distribution, promotion. The outcome of the course would be the development of a marketing plan for a local business.                                                                                                               |                                              |              |

| Brand strategy and communication provide a strategic step-by-step approach about brand creation, innovation, launching, communication and effective management. It represents an interesting balance between theory and cases. This course also emphasizes on internationalization, globalization, megabrand management and on the interrelationship between the business strategy and the brand strategy.                                                                                                                                                                                                                                                                                                  |                                              |              |
| <b>MKT610</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Applied Research in Marketing</b>         | <b>3 cr.</b> |
| The course objective is to present a general review of research and assessment methods that are used by marketing researchers with a view to get fundamental and applied knowledge in marketing. In addition, this course enables students to develop their research work, which should be relevant to the thesis they will complete within their curriculum.                                                                                                                                                                                                                                                                                                                                               |                                              |              |

| <b>Pre-requisite</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>MKT530 &amp; MKT610</b>                   |              |
| The course mainly aims at allowing students to learn and understand marketing's specific and original contribution within the field of business administration. It also enables students to use and apply the main concepts related to markets assessment: environment, consumer behavior, demand and segmentation. The second part of the course covers the various decisions related to marketing; those linked to marketing variables: product, price, distribution and promotion.                                                                                                                                                                                                                       |                                              |              |
| <b>MKT660</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>International Marketing</b>               | <b>3 cr.</b> |
| This course covers the basic principles of marketing management, and explains its fundamental role within an international context. Based on the enterprise operational data, the participants set forth an international marketing plan. They conduct a market study, identify the product or service, make any necessary adaptations and establish a price, distribution and promotion strategy according to the product and the nature of the market.                                                                                                                                                                                                                                                    |                                              |              |
| <b>MKT680</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Retail and Sales Strategies</b>           | <b>3 cr.</b> |
| This course explores the various commerce options consumers and businesses are using in current times. It develops students' capabilities to develop and manage companies' brands omnichannel presence, whether offline or online. Students will address both strategic and practical aspects of retailing in a rapidly changing environment, from choosing the channel to developing appropriate consumer relationships. "This course also focuses on how channels are selected as part of a company's sales strategy, thereby providing the students advanced insights into managing the sales process."                                                                                                  |                                              |              |

| This Course prepares students with the strategic mind-set and frameworks essentials in this modern world to generate value through consumer centric digital marketing strategies. Topics such as social media, SEO, Content marketing, mobile technologies and other key digital marketing tools will be explored. Students will consider how analytics and experimentation can be used to reveal opportunities for strategic innovation and be analyzed to inform evidence-based insights. The course develops the analytical skills needed to formulate and implement successful digital marketing strategies.                                                                                            |                                              |              |

| Transport involves the physical movement of products between the providers and the receivers. It is a critical activity, performed, at most stages, in the supply chain process. In pure financial terms it is the second largest element, next to storage, in total distribution costs. Transportation also represents the physical operation's interface with the customer and is often classed as the "ambassadorial" activity of the supply chain. The primary objective of transportation is to deliver the right goods, to the right place, at the right time, in the right condition at the minimum cost.                                                                                            |                                              |              |

| This course provides a thorough understanding of transport-related contracts as well as transport-related insurance covers. In its first part, the course discusses the different parties involved in the transportation industry and the interaction between them that is secured by different types of contracts specific to the industry. In its second part, the course discusses transport insurance covers and their constituents, while explaining how different parties mitigate their risks.                                                                                                                                                                                                       |                                              |              |

| This course explores the history, management and future trends in air transportation. It covers the four principal segments of air transportation: major carriers, regional carriers, all-cargo carriers and general aviation. In each segment, the issues of aircraft design, market share, finance, insurance and operations are discussed. The course analyzes the development and application of national and international regulations that impact air transportation. Topics include, cost structure, air fares, flight crews and safety, environmental impacts of aircraft and airports, operating and service characteristics, technological advances, world competition and intermodal operations. |                                              |              |
| <b>TRA440</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Shipping Economics and Management</b>     | <b>3 cr.</b> |

| The course focuses on the economics of chartering, containerization, ship finance, international trade, political factors and ship manning. It concentrates on the marketing and management area which are so important nowadays for a successful ship management, whether in the liner cargo, bulk cargo or specialized tonnages. The course is essential as it connects the transport sector to the business industry, showing that transportation is a business sector by itself.                                                                                                                                                                                                                        |                                              |              |
| <b>TRA455</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Simulation Enterprise - Transport</b>     | <b>2 cr.</b> |

| The objective of this course is for students to gain skills and knowledge in all aspects and issues of logistics in a sustainable supply chain. The course offers a broad-based business education to undergraduate students, with a particular focus on transport, distribution, logistics and other transport-related industries and issues. The content covers the basic operations of a freight forwarding agency including types of cargo, trade lanes, terminology and abbreviations, equipment and facilities, and the various relationships that exist between the forwarder, clients, carriers and government agencies.                                                                            |                                              |              |

# Faculty of Arts and Sciences

## Overview

The Faculty of Arts and Sciences at USEK, founded in 2019, is the result of the merge of the Faculty of Letters, Philosophy and Humanities, Sciences and Music and is an academic reengineering process decided in 2017. The Faculty embraces a variety of programs supporting research, teaching and students' learning experience in Humanities, Social Sciences, Arts and Natural Sciences, including Mathematics, Computing and Nutrition.

### Mission

In line with USEK and the Lebanese Maronite Order Legacies in liberal arts education, the Faculty of Arts and Sciences aims at graduating morally, intellectually and technologically aware citizens and leaders serving the advancement of knowledge and the wellbeing of humanity. The Faculty of Arts and Sciences does so through both breadth and depth of education and research in liberal arts and sciences.

The Faculty of Arts and Sciences consists of the following departments/programs:

### FRESHMAN

- Freshman Arts
- Freshman Sciences

### HUMANITIES & EDUCATIONAL SCIENCES

#### Department of Education

- Bachelor of Arts in Education - Basic Education
- Bachelor of Arts in Education - Early Childhood Education
- Minor in Basic Education
- Teaching Diploma - Options:
  - Arabic Language and Literature
  - Chemistry
  - Computer Science
  - Education (Basic Education Cycles I & II)
  - English Language and Literature
  - French Language and Literature
  - History
  - Life Sciences
  - Mathematics
  - Music Education
  - Philosophy
  - Physics
  - Social Sciences
  - Visual and Performing Arts
- Master of Arts in Education
 

*Emphasis:*

  - Basic Education
  - Administration of Education
  - Technology of Education
  - Support of People with Special Needs
  - Supervision and Pedagogical Coordination
- Ph.D. in Education Sciences

#### Institute of History

- Bachelor of Arts in History
- Minor in History of Lebanon and the Middle East

- Master of Arts in History
- Master of Arts in Information Studies
- Ph.D. in History
- Ph.D. in Archeology and Art History

#### **Department of Languages and Literatures**

- Bachelor of Arts in Languages and Literatures  
*Emphasis:*
  - Arabic Language and Literature
  - English Language and Literature
  - French Language and Literature
- Bachelor of Arts in Modern Languages and Translation
- Minor in Arabic Language and Literature
- Minor in Italian Language and Culture
- Minor in Modern Languages and Translation
- Diploma in Interpretation
- Master of Arts in Arabic Language and Literature
- Master of Arts in English Language and Literature
- Master of Arts in French Language and Literature
- Master of Arts in Translation
- Ph.D. in Arabic Language and Literature
- Ph.D. in English Language and Literature
- Ph.D. in French Language and Literature
- Ph.D. in Language Sciences and Traductology

#### **Department of Philosophy**

- Bachelor of Arts in Philosophy
- Minor in Philosophy
- Master of Arts in Philosophy
- Ph.D. in Philosophy

### **MATH, COMPUTER SCIENCE & IT**

#### **Department of Computer Science and Information Technology**

- Bachelor of Science in Computer Science
- Bachelor of Science in Information Technology
- Minor in Web and Mobile Programming
- Master of Science in Computer Science
- Master of Science in Cybersecurity and Cyberdefence
- Information Assurance & Cybersecurity Certificate

#### **Department of Mathematics**

- Bachelor of Science in Actuarial and Financial Mathematics
- Minor in Actuarial Studies
- Master of Science in Actuarial and Financial Mathematics
- Master of Science in Mathematics

### **MUSIC & ARTS**

#### **Department of Communication Arts**

- Bachelor of Arts in Cinema and Television
- Minor in Photography
- Minor in Sound Recording

- Master of Arts in Cinema and Television
- Ph.D. in Visual Arts

#### **Department of Conservation, Restoration of Cultural Property and Sacred Art**

- Bachelor of Arts in Conservation, Restoration of Cultural Property & Sacred Art
- Bachelor of Arts in Conservation, Restoration of Cultural Property & Sacred Art - Emphasis: Sacred Art
- Minor in Sacred Art: Iconography
- Minor in Sacred Arts: Plastic Arts
- Master of Arts in Conservation, Restoration of Cultural Property & Sacred Art
- Ph.D. in Conservation, Restoration of Cultural Property & Sacred Art

#### **School of Music & Performing Arts**

- Bachelor of Arts in Music
  - Emphasis:*
    - Musicology
    - Music Education
- Bachelor of Arts in Music – Music Industry
- Bachelor of Arts in Higher and Specialized Music Education -
  - Emphasis:*
    - Music Composition
    - Musical Instrument
    - Singing (Arabic Singing / Occidental Classical Singing)
    - Solfeggio/Dictation
- Bachelor of Arts in Performing Arts
- Minor in Musicology
- Minor in Theater
- Master of Arts in Music
  - Emphasis:*
    - Musicology
    - Music Education
- Master of Arts in Performing Arts
- Ph.D. in Music and Higher and Specialized Music Education
- Ph.D. in Theater

### **RELIGIOUS & ORIENTAL SCIENCES**

#### **Department of Religious and Oriental Sciences**

- Bachelor of Arts in Religious and Pastoral Education
- Master of Arts in Religious Sciences
- Master of Arts in Syro-Antiochean Sciences

#### **Institute of Liturgy**

- Bachelor of Arts in Liturgy
- Online Diploma in Liturgy
- Master of Arts in Liturgy
- Ph.D. in Liturgy

### **SOCIAL & BEHAVIORAL SCIENCES**

#### **Department of Journalism**

- Bachelor of Arts in Journalism and Communication
- Minor in Journalism and Communication
- Master of Arts in E-Journalism and E-Communication
- Master of Arts in Journalism and Communication

### Department of Psychology and Social Sciences

- Bachelor of Arts in Psychology
  - Emphasis:*
    - Clinical Psychology
    - Industrial Psychology
- Bachelor of Arts in Social Sciences
- Minor in Psychology
- Minor in Sociology
- Minor in Social Intervention
- Master of Arts in Intervention and Social Work
- Master of Arts in Psychology
  - Emphasis:*
    - Clinical Psychology
    - Industrial Psychology
    - School Psychology
- Master of Arts in Social Sciences
- Diploma in Interventions and Systematic Therapies
- Ph.D. in Psychology
- Ph.D. in Social Sciences

## SCIENCES

### Department of Biology

- Bachelor of Science in Biology
- Minor in Natural Sciences
- Master of Science in Biology
- Master of Science in Neuroscience and Biotechnology
- Ph.D. in Life and Earth Sciences

### Department of Chemistry and Biochemistry

- Bachelor of Science in Biochemistry
- Bachelor of Science in Chemistry
- Minor in Biochemistry
- Minor in Applied Chemistry
- Minor in Chemistry
- Master of Science in Biochemistry
- Master of Science in Chemistry
- Master of Science in Environmental Technologies
- Ph.D. in Chemistry

### Department of Nutrition and Food Sciences

- Bachelor of Science in Human Nutrition and Dietetics
- Bachelor of Science in Nutrition and Dietetics - Coordinated Program
- Minor in Sports Nutrition
- Master of Science in Nutrition
- Ph.D. in Agriculture and Food Sciences

## Administration and Full-time Faculty

Eng. Pascal Damien, **Dean**

Dr. Karine Nasr, **Associate Dean and Assistant Dean for Humanities & Educational Sciences**

Prof. Walid Hleihel, **Associate Dean for Research and Doctoral Studies**

Prof. Ranya Salamé, **Associate Dean of Doctoral Studies for Human and Social Sciences**

Fr. Toni Eid, **Assistant Dean for Religious & Oriental Sciences**

Fr. Prof. Badih El Hajj, **Assistant Dean for Music & Arts**

Dr. Nadine Zalaket, **Assistant Dean for Social & Behavioral Sciences**

Dr. Elie El Ahmar, **Assistant Dean for Math, Computer Science & IT**

Dr. Nathalie Estephan, **Assistant Dean for Sciences**

### **Professors:**

Fr. Prof. Augustin Mouhanna

Fr. Prof. Badih El-Hajj

Prof. Charbel Fares

Fr. Prof. Georges Hobeika

Fr. Prof. Jean Akiki

Fr. Prof. Jean Ready

Fr. Prof. Joseph Moukarzel

Prof. Joseph Saab

Fr. Prof. Karam Rizk

Prof. Marie Fayad

Prof. Mireille Issa

Prof. Mirna Abboud Mzaouak

Prof. Naim Ouaïni

Prof. Nicole Saliba-Chalhoub

Prof. Ranya Salamé

Prof. Walid Hleihel

### **Assistant Professors:**

Fr. Dr. Antoine Al Tahan

Dr. Eva Hashem

Fr. Dr. Elie Saade Dr. Linda Rizk Saber

Sr. Marie Therese Elia

Dr. Maya Hobeika Kahwagi

Dr. Mohammad Kacim

Dr. Mireille Makary

Dr. Patricia Zaylah

Dr. Rabih Nabhan

Dr. Rana Elias

Dr. Randa Saliba-Chidiac

Dr. Rita Khater

Dr. Rita Khalil-Khoury

Dr. Roni Abou Khalil

Fr. Dr. Toni Eid

Dr. Yonna Sacre-Al Shamy

Fr. Dr. Youssef Matta

Dr. Youssef Abi Raad

### **Associate Professors:**

Fr. Dr. Abdo Badwi

Dr. Christelle Stephan-Hayek

Dr. Edward Yerwant Torokian

Dr. Elie Al Ahmar

Dr. Farid El Moujabber

Dr. Faten El Hage Yahchouchi

Fr. Dr. Jean Maroun Maghames

Mr. Joseph Chemaly

Dr. Karine Nasr Demerjian

Dr. Léa El Yahchouchi Abi Chaker

Dr. Lena Saadé Gebran

Dr. Nadine Zlaket

Dr. Nathalie Estephan

Dr. Petra Yaacoub Bilane

Dr. Randa Abi Aad

Dr. Rima Mattar-Mazraani

Dr. Samar El Hage

Dr. Sophie Julien Sukarieh

Dr. Walid Harb

Fr. Dr. Youssef Tannous

Fr. Dr. Ziad Sacre

### **Lecturers:**

Fr. Abdallah Badaoui

Mrs. Julnar Deaibess Malek

Dr. Michel El Zoghby

## FRESHMAN

### Freshman Arts / Freshman Sciences

#### Mission

The mission of the Freshman Program is to provide access to higher education for Lebanese or non-Lebanese students who have the permission to continue studying the foreign curriculum by providing them with courses that comply with the requirements of the Lebanese Ministry of education.

#### Program Educational Objectives

1. Students will be informed and readied for higher education programs through appropriate pre-requisites.
2. Students will achieve improved competency in writing, note-taking, active reading, and critical thinking skills to be able to master university level work.
3. Students will develop appropriate university conduct and make progress toward clarifying their choice of major.

#### Program Outcomes

- a. Students will read, understand, and analyze documents related to their course of study.
- b. Students will advance their critical thinking through writing an effective critique on topics related to their course of study.
- c. Students will know how to find documents related to their course of study by resorting to university library and other recourses.
- d. Students will work in teams and individually to conduct laboratory experiments related to their course of study.

#### Degree Requirements

This program requires 30 credits distributed as following:

##### Freshman Arts

|                                                        |                     |

## HUMANITIES & EDUCATIONAL SCIENCES

### Undergraduate Programs

#### Bachelor of Arts in Education - Basic Education (Hybrid<sup>i</sup>)

Offered in Main Campus Kaslik and in RUC Zahle

##### Accreditation

This accreditation commission of evalag, Evalag-Baden-Württemberg <http://www.evalag.de>, accredited this program and awarded the evalag international label for program accreditation.

##### Mission

The main mission of the basic education undergraduate program is to train future teachers with moral, human and ethical, values, and an ability for scientific reasoning skills confirmed in education at the primary level (in cycles I and II) and an ability to manage a class independently and responsibly.

These skills empower future teachers to integrate into the labor market, access higher education and research.

##### Program Educational Objectives

1. Graduates will become qualified teachers who will engage their skills for the promotion of education at the forefront of technology and professional and ethical knowledge.
2. Graduates will make careers in schools, especially in primary schools and will be education specialists adapted to training in sub cycles I and II.
3. Graduates will demonstrate all the skills necessary to pursue a graduate course and excellent research.
4. Graduates will become leader teachers in imparting knowledge and design, and the evaluation of teaching - teaching those who undergo the process of learning.

##### Program Outcomes

- a. Rigorously adopt a research methodology that combines the epistemological, ethical and technological principles.
- b. Identify the various fields of education, and the different learning theories and know how to apply them in educational practice.
- c. Distinguish the grammatical and linguistic specificities of the language, used as a language of teaching and oral and written communication, in order to conduct educational analysis on different kinds of texts
- d. Ethically and humanely manage a classroom group (or small group classes).

<sup>i</sup> Hybrid: Courses offered in French and/or English

- e. Reproduce an artistic flair that gives all teaching practices soft and flexible behavioral skills.
- f. Formulate and integrate the educational objectives into different didactic situations, in order to achieve the practical activities that support the theoretical approaches in language teaching.
- g. Integrate technological tools in teaching, by developing the use of TICE to link the professionalism and creativity of the teacher to the excellent use of the TIIC.
- h. Evaluate objectively and scientifically student performances and learning outcomes.
- i. Validate the quality of education, and organize, plan and construct a course, which is expressed in lessons.
- j. Ensure the transfer of mathematical knowledge in the school context, using logical reasoning from various approaches.
- k. Make scientific analyzes and investigations and determine the effectiveness of science education and the steps to be taken in order to properly acquire it.

### Degree Requirements

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                                                                                                                                                              |           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>General Education</b>                                                                                                                                                                     | <b>30</b> |
| General Education - Arts and Humanities                                                                                                                                                      | 3 to 6    |
| General Education - Behavioral, Social Sciences and History                                                                                                                                  | 6 to 9    |
| General Education - Civic Engagement                                                                                                                                                         | 2         |
| General Education - English and French Communication                                                                                                                                         | 6         |
| General Education - Quantitative Reasoning                                                                                                                                                   | 3         |
| General Education - Religious Sciences                                                                                                                                                       | 3         |
| General Education - Science and Health                                                                                                                                                       | 3         |
| General Education - Sports                                                                                                                                                                   | 1         |
| <b>Common Core</b>                                                                                                                                                                           | <b>18</b> |
| EDU201 - History of Education                                                                                                                                                                | 3         |
| EDU215 - Techniques of Expression                                                                                                                                                            | 3         |

## Bachelor of Arts in Education - Early Childhood Education (Hybrid<sup>i</sup>)

### Mission

The main mission of the Early Childhood Education undergraduate program is to train future teachers in ethical values and scientific reasoning skills suitable for an early Childhood level (from 0 – to – 8 years), and to develop their ability to manage classroom responsibility.

The program prepares the specialized teacher in all disciplines because he/she will be responsible of the class. These skills empower future specialized teachers to integrate into the labor market access higher education and research.

### Program Educational Objectives

1. Graduates will become qualified teachers, able to engage their skills for the promotion of education using contemporary technology and professional and ethical knowledge.
2. Graduates will forge careers in schools, especially in Early Childhood Education and will be education specialists adapted to training in the areas of early education (0-8).
3. Graduates will demonstrate all the skills necessary to pursue a graduate course and excellent research opportunities.
4. Graduates will become leader teachers in imparting knowledge and design, and the evaluation of teaching - teaching those who undergo the process of learning.

### Program Outcomes

- a. Students will compare the various fields of human sciences, focusing on the interaction between education and the aforementioned sciences.
- b. Rigorously adopt methods and materials in early education.
- c. Communicate orally through language exchanges and encouraging classroom communication by capturing their students' attention.
- d. Identify the different learning theories of Early Years Education and know how to apply them in educational practice.
- e. Check and analyze the levels of English language and distinguish the linguistic specificities of the target language taught and used as a language of teaching and communication.
- f. Ethically and humanely manage a classroom group (or small group classes).
- g. Develop an artistic flair that gives teaching practices soft and flexible behavioral skills.
- h. Consider the educational objectives, and formulate and integrate them into different didactic situations.
- i. Deal with theoretical issues of specialized English language teaching.
- j. Achieve practical activities that support theoretical approaches in teaching.
- k. Examine the particularities of different types and kinds of texts and conduct an educational analysis based on a study of the context in which the products are set.
- l. Integrate technological tools in early education.
- m. Ensure the transfer of mathematical knowledge in the early years education context, using logical reasoning from various approaches.
- n. Ensure the transfer of science language in the early years education context and the effectiveness of science education and the steps in it.
- o. Evaluate student performances and learning outcomes objectively and scientifically.
- p. Validate the quality of education, and organize, plan and construct a course, in the form of teaching sessions.

### Degree Requirements

---

<sup>i</sup> Hybrid: Courses offered in French and/or English

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                                |           |
|----------------------------------------------------------------|-----------|
| <b>General Education</b>                                       | <b>30</b> |
| General Education - Arts and Humanities                        | 3 to 6    |

## Bachelor of Arts in History (Hybrid<sup>i</sup>)

### Accreditation

This accreditation commission of evalag, Evalag-Baden-Württemberg <http://www.evalag.de>, accredited this program and awarded the evalag international label for program accreditation.

### Mission

The program aims to introduce students to the history of the region they live in, which constitutes their direct heritage. Students will learn about Eastern history, especially the history of Lebanon and history of the Middle East since ancient times.

<sup>i</sup> Hybrid: Courses offered in French and/or English

Additional courses will be offered covering religious history, such as Christianity and Islam, which contribute in developing a double-sided civilization in the Middle East.

#### **Program Educational Objectives**

1. Graduates will conduct objective analysis on historical events in the Middle East.
2. Graduates will master the different aspects of the history of their region: religion, politics, economic and social matters.
3. Graduates will contextualize, in time and in space, the different events they study.
4. Graduates will be able to conduct a comparative analysis on different scales.

#### **Program Outcomes**

- a. Distinguish Lebanon's historical heritage, museums, and art.
- b. Decipher inscriptions and texts in ancient languages.
- c. Analyze great contemporary problems while linking them to historical events.
- d. Conduct historical research, develop a precise subject and manage an adequate dissertation.
- e. Savvy historical facts, problems and events.
- f. Comprehend various theological interpretations, current legal issues and myths about Islam.
- g. Perceive facts about the ancient near-east.
- h. Fathom the modern history of different regions.
- i. Discern contemporary occurrences.
- j. Acquire the Greek and Byzantine history.

#### **Degree requirements**

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                                                                          |           |
|----------------------------------------------------------------------------------------------------------|-----------|
| <b>General Education</b>                                                                                 | <b>30</b> |

## Bachelor of Arts in Modern Languages and Translation

### Accreditation

This accreditation commission of evalag, Evalag-Baden-Württemberg <http://www.evalag.de>, accredited this program and awarded the evalag international label for program accreditation.

### Mission

The mission of the program is to enable students to promote inter-linguistic communication. They will achieve a complete knowledge and practice of Arabic, French and English - simultaneously with the other international languages elective acquisition - as well as the art of translation and interpretation from one of these languages into another. Together with their increased professional standing, graduates will be in a position to equip Lebanon, at the confluence of the East and the West, with a historically healthy multilingualism and a capacity for openness, dialogue, communication and exchange, providing enrichment at all levels: economic, socio-political, educational and cultural etc. The Department is concerned with promoting multilingualism and rewardingly, to train professionals in the practice of written translation and interpretation.

### Program Educational Objectives

1. Enable our future professional translators to communicate successfully in Arabic, French and English in multicultural contexts, in order to produce quality translations.
2. Train our future graduates to teach translation and modern languages in primary and secondary classes.
3. Build the professional competencies and skills of our future graduates who leave us equipped with lifelong learning habits.

**Program outcomes**

- a. Students will acquire an ability to teach English.
- b. An ability to teach the French language.
- c. An ability to teach Arabic.
- d. An ability to work in the development of bilingual glossaries.
- e. An ability to teach general translation.
- f. An ability to contribute to the lingual monitoring in their native language, Arabic.
- g. An ability to contribute to lingual monitoring in a foreign language.
- h. An ability to perform economic specialist translations.
- i. An ability to perform legal specialist translations.
- j. An ability to intervene in international negotiations and mediations.

**Degree Requirements**

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

## Bachelor of Arts in Philosophy (Hybrid<sup>i</sup>)

### Accreditation

This accreditation commission of evalag, Evalag-Baden-Württemberg <http://www.evalag.de>, accredited this program and awarded the evalag international label for program accreditation.

### Mission

The principal mission of the program is to provide undergraduates and graduates with a broad and intensive training in philosophy and offer them the opportunity to develop critical thinking competencies, in order to analyze the major issues of our time and to have the ability to handle complex logical arguments.

These skills will empower them to enter the labor market and gain access to higher education and research.

### Program Educational Objectives

1. Graduates will become qualified teachers and professionals in philosophy in secondary education schools.
2. Graduates will make careers in interdisciplinary environments such as journalism and media.
3. Graduates will demonstrate all the skills necessary to pursue a graduate course and carry out excellent research.
4. Graduates will become leaders in the conversion of thinking.

### Program Outcomes

- a. Students will correlate the various fields of human sciences and target the interaction between philosophy and other sciences.
- b. Define the key concepts of philosophy and delineate the historical and theoretical issues that give it meaning and value.
- c. Recognize that philosophical wisdom is transboundary and prioritize the Arab world and the Far Eastern world.
- d. Rigorously approach a research methodology that combines epistemological, ethical and technological principles.
- e. Assess the contribution of classical philosophy and tradition as the foundation of modernity.
- f. Reframe Greek philosophy within Arab-Islamic thought.
- g. Develop a rational approach to compare the different currents or tendencies and philosophical schools.
- h. Create questioning situations that highlight reflection upon ontological and anthropological problems.
- i. Build up an ethical-political knowledge and integrate it into action.
- j. Formulate a metaphysical problem within a strictly philosophical perspective.
- k. Validate the parameters of meaning in their various linguistic, artistic and religious expressions.
- l. Structure and diagram a philosophical work and report critical synthesis.
- m. Put into practice the knowledge acquired, evaluate training, and master the fundamental skills pertaining to teaching philosophy and pedagogy

### Degree Requirements

## Teaching Diploma (Hybrid<sup>i</sup>)

### Options / Majors

- Chemistry
- Computer Sciences
- Education (Basic Education Cycles I & II)
- Educational Sciences (Philosophy)
- Educational Sciences (Social Sciences)
- English Language and Literature
- French Language and Literature
- History
- Life Sciences
- Mathematics
- Music

<sup>i</sup> Hybrid: Courses offered in French and/or English

- Physics
- Visual and Performing Arts

### Mission

The main task of the educational degree program [DE] is to train graduates to become professional teachers in their specialization. This program is the length of a postgraduate academic year, and delivers quality training to would-be teachers that reinforces their basic training and allows them to enter the labor market with a solid knowledge in their specialization and the skills to teach.

### Program Educational Objectives

1. Graduates become specialist teachers in the public and private educational sectors.
2. Graduates will undertake research in the field of contemporary specialized didactics and school programs.
3. Graduates, equipped with a psychological, philosophical, sociological and ethical knowledge, will learn to interpersonal communication skills and group management in a class.
4. Graduates will be teaching project planners by putting into practice the theoretical knowledge acquired using multidisciplinary resources, and by implementing specialized evaluation techniques.

### Program Outcomes

- a. Students will analyze problem areas related to the didactics and functioning of the school system (Lebanese in particular).
- b. Develop knowledge relating to areas of teaching in their specialization.
- c. Create didactic situations and possible solutions to problems in context.
- d. Integrate the educational use of technological tools to apply new known techniques used in the world of ICT.
- e. Discern the relationship between philosophy and education and make use of this aspect in the theme of the course.
- f. Develop a notional and conceptual synthesis related to social stratification as a school differentiator.
- g. Deepen the psychic needs of the child as well as the psychological management of groups and the educational relationship in the classroom.
- h. Identify the major epistemological trends and apply them in teaching practice and mental operations in cognitive dominance.
- i. Develop skills and gather essential data for evaluation and apply them in a variety of assessment practices.

### Degree Requirements - Education (Basic Education Cycles I & II)

|                                              |           |

## Academic Minors

### Minor in Arabic Language and Literature

#### Mission

The mission of the minor in Arabic Language and Literature is to assist students in understanding the Arabic heritage and to enable them to acquire knowledge and practice of Arabic as a language of communication and cultural exchange. It also enables them to attain an advanced level in writing in standard Arabic. Furthermore, this minor program helps them to build a career in teaching basic Arabic and editing texts.

#### Program Educational Objectives

1. Students are trained to understand modern and contemporary Arabic literary texts.
2. Students are trained to enhance their speaking and writing skills in Arabic.
3. Students are trained to teach basic Arabic language.

#### Program Outcomes

- a. Understand the Arabic language and literature in the light of historical and cultural contexts and explain basic linguistic Arabic concepts.
- b. Communicate effectively in Arabic both on the oral and written levels.
- c. Recognize and classify Arab modern and overseas writers.
- d. Compare Arabic literature to foreign literature.

#### Minor Requirements

|                                                    |           |

### Minor in Basic Education (Hybrid<sup>i</sup>)

#### Mission

The main mission of the minor in Basic Education program is to train students with moral, human and ethical values, and an ability for scientific reasoning skills required in education at the primary level (in cycles I and II) and an ability to manage a class independently and responsibly.

#### Program Educational Objectives

1. Students will demonstrate all the skills necessary to synthesize and apply educational principles in everyday and professional contexts.
2. Students will become educational animators who will engage their skills in designing training packages for different objectives.
3. Students will acquire a broad range of critical reasoning skills to develop learners' thinking and analytical abilities in different didactic and pedagogical situations.

<sup>i</sup> Hybrid: Courses offered in French and/or English

**Program Outcomes**

- Identify the various fields of education, and the different learning theories.
- Ethically and humanely manage a classroom group or a small group.
- Integrate technological tools in teaching.
- Formulate and integrate the educational objectives into different didactic situations.
- Conduct an educational analysis on educational literature.

**Minor Requirements**

**Minor in History of Lebanon and the Middle East (Hybrid<sup>i</sup>)****Mission**

The program aims to introduce students to the history of the region they live in, which constitutes their direct heritage. Students will learn about eastern history, especially the history of Lebanon and the history of the Middle East since ancient times.

**Program Educational Objectives**

- Students will be able to recognize and analyze the historical, economic, geographic, political and social matters related to the historical events of the various periods of the history of Lebanon.
- Students will be apt to integrate the correct historical terminology into any related discussion, and relate current situations in their specialization and career to historical events.

**Program Outcomes**

- Students will master the basics of museology, conservation, restoration and publishing, simultaneously distinguishing Lebanon's museums, art and historical heritage.
- Students will understand great contemporary issues while contextualizing them in past time and space and interconnecting history and other various matters such as human habitat, distribution and activities.
- Students will grasp the numerous historical productions of the concerned period, notably architecture, paintings, sculptures, photographs, installations, digital and graphic arts.
- Recognize historical facts, problems and events in Lebanon's contemporary period.

**Minor Requirements**

|                                             |           |

**Minor in Italian Language and Culture****Mission**

<sup>i</sup> Hybrid: Courses offered in French and/or English

The mission of the minor in Italian Language and Culture is to enable students to read and understand Italian texts. It enables them to communicate about the simple and routine tasks of everyday life, requiring a direct exchange of information on familiar topics and activities.

#### **Program Educational Objectives**

1. Understand modern and contemporary Italian texts.
2. Communicate in Italian fluently on topics that are familiar, of personal interest or pertinent to everyday life (e.g. family, hobbies, work, travel and current events).
3. Deal with most situations likely to arise whilst travelling in an area where Italian is spoken.

#### **Program Outcomes**

- a. Acquire a thorough knowledge of all 4 linguistic skills: listening, speaking, reading and writing.
- b. Learn the most common and basic phonetic, grammatical and lexical structures through conversation and simple dialogues.
- c. Develop verbal communication skills that will enable interaction in basic everyday conversations.
- d. Apply writing skills as they produce personal narratives and short compositions.
- e. Gain familiarity with some aspects of contemporary Italian life and culture.

#### **Minor Requirements**

| <b>Total</b>                                 | <b>15</b> |

## **Minor in Modern Languages and Translation**

### **Mission**

One of the missions of the program is to enable students who would like to promote inter-linguistic and intercultural communication, to acquire the basics of the art of translation from English, French or Arabic to each one of these languages.

The Department is concerned in training students to practice written multilingual translation.

### **Program Educational Objectives**

1. Students are trained in trilingual translation (Ar.-Fr.-Eng.).
2. Students are trained in translation of a pragmatic text (Ar.-Fr.-Eng.).
3. Students are trained in translation of a specialized text (Ar.-Fr.-Eng.).

### **Program Outcomes**

- a. An ability to communicate successfully in Arabic, French and English.
- b. An ability to practice contrastive linguistics.
- c. An ability to select, in a specialized text, economic terms and to find their equivalent in another language.
- d. An ability to select, in a specialized text, legal terms and to find their equivalent in another language.

### **Minor Requirements**

## Minor in Philosophy (Hybrid<sup>i</sup>)

### Mission

The principal mission of this minor is to provide students with necessary knowledge and primary competencies in relation to their major program. It also presents a panoramic overview of the entire history of philosophy and its major thinkers, providing students with the skills of analytical and critical thinking.

### Program Educational Objectives

1. Students will learn the basic notions in philosophy that serve as a framework for all the humanities programs.
2. Students will demonstrate all the skills necessary to pursue a graduate course and acquire the skills necessary to excel in any field of research.
3. Students will be formed to be innovators and pioneers in their graduate program as well as in future pursuits.

### Program Outcomes

- a. Students will correlate the various fields of human sciences, and target the interaction between philosophy and other sciences.
- b. Define the key concepts of philosophy and delineate the historical and theoretical issues that give it meaning and value.
- c. Recognize that philosophical wisdom is transboundary, and prioritize the Arab world, and reframe Greek philosophy within Arab-Islamic thought.
- d. Build up an ethical-political knowledge and integrate it into action, and validate the parameters of meaning in their various linguistic, artistic and religious expressions.

### Minor Requirements

|                                                                      |           |

## Graduate Programs

### Master of Arts in Arabic Language and Literature

#### Mission

The mission of the MA in Arabic Language and Literature is to enable students to reach highly professional aims in literary criticism and language analysis, as well as in producing texts and discourses in the field of academic research. Advances in the latter are conditional on an extended knowledge of global literature, literary criticism, and linguistics.

#### Program Educational Objectives

1. Graduates are trained to carry out research in the areas of Arabic language and literature.
2. Graduates are trained to compare key literary texts and important writers with texts and writers of world literature.
3. Graduates are trained in writing Master's theses (choosing a subject, formulating a research question and a literature review, designing an outline, writing and implementing a methodology).

#### Program Outcomes

<sup>i</sup> Hybrid: Courses offered in French and/or English

Students will:

- a. Apply the rules of the methodology in conducting scientific research.
- b. Apply technical and formal rules of the methodology in the presentation of scientific articles.
- c. Locate the place of different cultures, in particular the movement of universal civilizations.
- d. Identify the impact and reciprocal influences between Arab civilization and other universal civilizations.
- e. Relate the contribution of language to modern and contemporary Arab literary studies.
- f. Examine the contribution of Arabic literature to global literature.
- g. Apply various types of textual approaches.
- h. Evaluate Arabic literature and its relationship to foreign literature in a comparative perspective.
- i. Examine the impact of modern drama on contemporary Arab societies.
- j. Propose new topics and formulate research questions for MA theses.

## Master of Arts in Education (Hybrid<sup>i</sup>)

### Emphasis

- Basic Education
- Administration of Education
- Technology of Education
- Support of People with Special Needs
- Supervision and Pedagogical Coordination

### Mission

The Master of Arts in Education is a further elaboration and professional development, for a better approach to different training situations, namely the basic education, the technology of education, the administration of education, the supervision and pedagogical intervention and the accompaniment of people with special educational needs. The training offered by this Master is theoretical, methodological and practical, it aims at adopting the professional competencies by developing the ability of students to design, organize, manage and control training activities in different school contexts. It deepens the engineering of training and focuses on knowledge, the questioning of practices of trainers and adaptation approaches to cope with the educational changes and to anticipate developments in education.

### Program Educational Objectives

1. Graduates will demonstrate all the skills necessary to pursue a doctoral course and excel in research.

<sup>i</sup> Hybrid: Courses offered in French and/or English

2. Graduates will become specialized teachers and trainers equipped with a broad training, versatile and coherent, which will allow them to work in an environment increasingly diversified and pluralistic.
3. Graduates will become heads of schools, executive directors, quality accreditors prepared to address the changes achieved in the world of education and confront the various modes of governance of school management at the forefront of professional and ethical knowledge.
4. Graduates will become professional in educational technology and designers, being equipped with models and effective tools to implement computerized teaching techniques and multimedia projects.
5. Graduates will become teachers and trainers with the essential capacity to integrate into teaching and coaching the professional practices that meet special needs education.
6. Graduates will become specialized coordinators in the use of methods and practices of coordination, supervision and pedagogical intervention in order to train and support teachers and organize courses at schools.

#### **Program Outcomes**

- a. Define useful knowledge and basic concepts in methodology of research in human sciences and to devise a working method that empowers the Master's students to combine the epistemological, ethical, technological and statistical concepts used in the context of research, in order to produce a pre-project.
- b. Correlate laws, decrees, and the basic texts from the Lebanese educational system, to develop skills in educational legislation.
- c. Analyze the components of a curriculum and conceptions renewed at that level, according to the changes and transformation operated on the teaching programs, and plan an educational policy.
- d. Identify administrative, economic, educational and humanitarian management styles to reflect in professional practices observed or experienced within the school context.
- e. Compare different international approaches to comparative education and interpret the data offered by innovative educational issues and their impact on the world of education.
- f. Recognize the data of linguistics as applied to teaching and the theories of learning that will be consolidating the development of innovative teaching/learning situations for the contents to learn.
- g. Identify concepts, conceptual, operational and economic models, tools for a better understanding of the field of educational management, and for interpreting the data that will accompany the acceleration of change in education.
- h. Assess the performance of the educational establishment in light of the criteria of quality in order to improve the establishment educative work.
- i. Identify philosophical and sociological theories on contemporary issue of knowledge as well as theories of communication and transmission means of information.
- j. Examine the modes of an integrated training of different forms of e-learning and online educational resources, as well as concrete examples in the field of current research in ICT based on a particular theme.
- k. Describe the relationship that exists among psychomotor activities of people with special needs, in order to conceive teaching and learning situations for the contents to be learned and to integrate these various professional practices in the educative context.
- l. Recognize the different ways and forms of special needs educational problems in their physical impairments, psychological effects and learning disabilities.
- m. Analyze supervisory activities in subjects of educational coordination and identify the accompaniment process at the pedagogical, relational and didactic level, and their implementation in educational contexts, among teachers.
- n. Correlate terms of career guidance and design appropriate communication situations to manage and facilitate the exchange among partners in schools.
- o. Prepare an educational project or a master thesis in education.

*\*Students that choose to take the master thesis are not required to complete one of the 3 elective courses.*

## Master of Arts in English Language and Literature

### Mission

The mission of the MA in English Language and Literature is to prepare postgraduate students for advanced research in English linguistics and literature and complement their knowledge of contemporary linguistic and literary issues by providing them with the educational resources that further develop their critical thinking and research skills. The program will support research of issues related to the English language, literature and culture in the world today and enable graduates to have successful careers in education, editing, publishing, writing, or English communication-related professions.

### Program Educational Objectives

1. Graduates will be active members of their community by teaching the English language and literature in schools and universities or working in fields which require English language skills.
2. Graduates will be ready for national and international careers with the necessary English language skills as educators, editors, writers, analysts or communication professionals.

### Program Outcomes

- a. Students will Classify contemporary literature and apply literary theories to various texts.

- b. Explain contemporary linguistic phenomena and apply linguistic theories to real-situation texts.
- c. Develop research skills.
- d. Analyze critically and apply various linguistic and literary concepts as part of research endeavors.
- e. Develop academic writing.
- f. Utilize the latest educational techniques and skills to teach and assess the teaching of English as a foreign language.

## Master of Arts in French Language and Literature

### Mission

The program aims to train students to become French language and literature teachers in both complementary and secondary cycles, within colleges for which French is the first language of instruction. It also aims to train them to be able to form and write literary and linguistics criticism through media and communication fields, or through scientific research.

### Program Educational Objectives

1. Graduates will be able to teach French language and literature in the complementary and secondary school cycles.
2. Graduates will be able to make literary and linguistics criticism.
3. Graduates will be able to conduct a research.

### Program Outcomes

- a. Students will acquire the ability to teach linguistical and stylistical characteristics of French language, as well as literature contents and specifications in the Secondary Cycle of the Lebanese school system.
- b. An ability to produce a literary and linguistics criticism (publishing, cultural press, etc.).
- c. An ability to join a research center and produce research.

## Master of Arts in History (Hybrid<sup>i</sup>)

### Mission

In this program students will specialize in historical research, learn to manage primary sources, and to adopt methods and approaches as an historian.

Students will also give particular attention to the complete history of Lebanon. Students taking the Master degree program will be initiated into the field of art history, so they can become art historians, or art critics.

### Program Educational Objectives

1. Graduates will manage a research project from the beginning (selection and identification of the sources and of the method of analysis) to the final production of a research paper.
2. Graduates will classify the sources depending on their relevance and type.
3. Graduates will assert artistic and historical criticism.

### Program Outcomes

- a. Students will produce a complete analysis of Lebanon's history, in French and in Arabic
- b. Conduct research in a specialized area.
- c. Teach history at school and at university at undergraduate level.

### Degree requirements

## Master of Arts in Information Studies (Hybrid<sup>ii</sup>)

### Mission

MIS prepares knowledgeable and ethical professionals in the fields of library, archives and museums for a diverse and global information society by providing a program integrating excellent teaching, inspiring

<sup>i</sup> Hybrid: Courses offered in French and/or English

<sup>ii</sup> Hybrid: Courses offered in French and/or English

intellectual curiosity and research and fostering interdisciplinary approaches to address challenges and provide exceptional services within diverse communities.

#### **Program Educational Objectives**

1. Perform administrative, service, and technical functions of professional practice in libraries, archives, museums and information centers.
2. Use existing and emerging technologies to meet needs in libraries, archival centers, museums and information centers.
3. Integrate relevant research to enhance their work in libraries and information centers.
4. Apply the highest ethical standards in their professional information practice, as articulated by relevant professional organizations.
5. Provide leadership and guidance in their community and to information professions.

#### **Program Outcomes**

- a. Identify and analyze information needs and opportunities of individuals and organizations
- b. Demonstrate critical thinking by integrating relevant models, theories, research and practices
- c. Demonstrate management, interpersonal and organizational skills
- d. Demonstrate leadership and advocacy skills
- e. Communicate knowledge from information studies and multidisciplinary specialties
- f. Demonstrate information technology fluency
- g. Demonstrate understanding of the selection, acquisition, licensing, organization, preservation, retrieval, and use of recorded knowledge and information resources
- h. Promote and model the professional values of ethical responsibility, intellectual freedom, and universal access to information
- i. Demonstrate awareness of diverse groups and how to serve them effectively
- j. Participate in ongoing professional development
- k. Teach others to identify, analyze, organize and use information

## Master of Arts in Philosophy (Hybrid<sup>i</sup>)

### Mission

The principal mission of the Master's program in philosophy is to prepare students for careers in the second cycle of secondary and higher education, and research in philosophy. The program provides them with philosophical competencies, which act in the transformations and thoughts of science, politics, religion and arts.

### Program Educational Objectives

1. Graduates will be able to become secondary school teachers within educational establishments.
2. Graduates will be able to have careers as assistant professors in universities and as budding researchers in the research laboratories of philosophy.
3. Graduates will be able to make careers in the various fields of journalism, in areas of cultural and religious mediation, in institutions and national, international political and ethical organizations, and in the field of diplomatic missions.
4. Graduates will demonstrate all the skills necessary to pursue a Doctoral course and excel in research.

### Program Outcomes

- a. Students will adopt an appropriate rigorous working method, which combines all technological, ethical, and epistemological principles, and put into practice the drafting of preparatory work, the purpose of which justifies the realization of a pre-project in philosophy.
- b. Analyze the basic principles of intercultural dialogue in its correlation with the dialogical will and highlight open debates on various controversial issues of interculturalism.
- c. Correlate the main mutations of philosophy (will, art, communication) and develop critical thinking.
- d. Address problems of political philosophy and assess the complex relationships between governance and societal change.
- e. Deepen the phenomena - limits of existence (God, transcendental birth, death etc.) in their correlative relationships and deduct, through the phenomenological method, their impact on the human experience.
- f. Formulate the great questions of religion and clear the paradoxical relationship of the distinctive elements that separate and reconcile faith and reason.
- g. Delimit the meaning of the concept of love, identify its ambiguities and show what stems from it as problems of conscience communication within the human experience.
- h. Question the concept of art in its correlation with the values of beauty, and recognize the dual aspect of its autonomy and its heteronomy.

## Master of Arts in Translation

### Mission

The mission of the MA in Translation is to allow its students to hone their specialization in technical translations and to comply with the requirements of academic research; so that they can perform the tasks assigned to them in their countries and inter-linguistic and intercultural vocation.

### Program Educational Objectives

1. Graduates are trained in general translation and specialize in translation for agencies and publishing houses.
2. Graduates are trained in teaching translation in complementary and secondary education.
3. Graduates will be trained in University research.

### Program Outcomes

- a. Students will perform general translations of books.
- b. Perform economic translations of books.
- c. Perform legal translations of books.
- d. Perform scientific and technical translations of books.
- e. Perform oral translations and interpretation.
- f. Perform editorial press and media translations.
- g. Perform subtitle translation for cinema and television.
- h. Be able to teach translation in schools.
- i. Be able to play the role of mediator in multilingual negotiations.
- j. Be able to conduct academic research.

## Diploma in Interpretation

### Mission

The Mission of the program is to train conference interpreters by offering them an intensive training in consecutive and simultaneous interpretation and providing them with the required skills and knowledge, in order to integrate them into the world of international organizations and other private and public institutions.

### Program Educational Objectives

1. Graduates will be trained for consecutive interpretation in Arabic, French and English.
2. Graduates will be trained for simultaneous interpretation from and into Arabic, French and English.
3. Graduates will be able to teach languages (Arabic, French and English).

### Program outcomes

- a. Students will understand a source text.
- b. Identify the language difficulties for each text.
- c. Interpret any text from Arabic, English or French.
- d. Reorganize ideas in the target language.
- e. Interpret the hidden meaning of any text.
- f. Translate, on sight, any text from and into three languages.
- g. Recognize the particularities of each language.
- h. Master the logical transition from one idea to another.
- i. Master note-taking in Arabic, French and English.
- j. Come up with a perfectly comprehensible orally translated text.

### Degree Requirements

*All the courses in the Diploma of Interpretation require a minimum passing grade of 60/100.*

## Doctoral Programs

### Ph.D. in Arabic Language and Literature

#### Mission

The mission of the Ph.D. in Arabic Language and Literature is to enable students to acquire deep knowledge in relation to a specific topic. This is achieved through further development of research techniques, and the implementation of relevant approaches and methods of analysis. It is essential for students to become able to position themselves as researchers, and to develop an understanding of their own strengths, as part of the process of their academic formation.

#### Program Educational Objectives

1. Graduates are trained to teach Arabic language and literature at university levels.
2. Graduates are trained to write creatively scientific articles and books in literary criticism and linguistics.
3. Graduates are trained in academic analysis and literary criticism, and the design, development and defense of innovative personal statements.

#### Program Outcomes

- a. Formulate research proposals in the various specializations of the discipline.
- b. Examine a thesis in the light of the principles and theories of modern and contemporary esthetics.

#### Degree Requirements

|                                                   |           |
|---------------------------------------------------|-----------|
| <b>Specialization</b>                             | <b>60</b> |
| LLA700 - Seminar: Scientific Research Methodology | 3         |
| LLA710 - Seminar: Comparative Literature          | 3         |
| LLA711 - Seminar: Linguistics and Terminologies   | 3         |
| Ph.D. Dissertation                                | 45        |
| Ph.D. Seminars by Doctoral College                | 6         |
| <b>Total</b>                                      | <b>60</b> |

### Ph.D. in Archeology and Art History (Hybrid<sup>i</sup>)

#### Mission

The Ph.D. Program focuses on research techniques and the methodology of thesis writing. Students will master the methods of developing and substantiating the results of their theory and on-site research. Beside their research work, students deepen their knowledge of Lebanon's history, art history and historiography.

#### Program Educational Objectives

1. Graduates will conduct thorough research, and master the use of sources and methods of writing a thesis.
2. Graduates will deliver professional oral presentations.

#### Program Outcomes

- a. Students will classify, organize and exploit research sources.
- b. Defend their research in an optimized timeline.
- c. Pursue their research in a limited time.

#### Degree requirements

|                                                                |           |
|----------------------------------------------------------------|-----------|
| <b>Common Core</b>                                             | <b>3</b>  |
| AAR785 - Art History                                           | 3         |
| <b>Specialization</b>                                          | <b>12</b> |
| AAR710 - Art and Archeology in Ancient Lebanon                 | 3         |

| AAR730 - Art and Archeology: Near-East in the Late-Empire 1566 | 3         |
| AAR740 - Teaching Art and Archeology                           | 3         |

<sup>i</sup> Hybrid: Courses offered in French and/or English

|                                            |           |
|--------------------------------------------|-----------|
| <b>Capstone</b>                            | <b>45</b> |
| AAR796 - Thesis Archeology and Art History | 45        |
| <b>Total</b>                               | <b>60</b> |

## Ph.D. in Education Sciences (Hybrid<sup>i</sup>)

### Mission

The mission of the program seeks to promote education as a discipline of instruction, communication and culture.

The program offers multidimensional skills in education to the labor market.

The programs offers all the necessary skills for success and proposes an innovative research field dealing with the problems of education.

### Program Educational Objectives

Training future Higher Education teachers and researchers in Education.

### Program Outcomes

Ph.D. holders will be able to teach within the Higher Education field and conduct and produce scientific research.

### Degree Requirements

|                                    |           |
|------------------------------------|-----------|
| <b>Specialization</b>              | <b>60</b> |
| Ph.D. Seminars by Doctoral College | 15        |
| Ph.D. Dissertation                 | 45        |
| <b>Total</b>                       | <b>60</b> |

## Ph.D. in English Language and Literature

### Mission

The mission of the program is to offer postgraduate students specialized training in the field of their choice within the English major by providing them with the educational resources that help them perfect their critical thinking and research skills and contribute to current knowledge in the field of study. Thus, the program will allow graduates to have successful careers in the fields of research, higher education, editing, writing, and English communication.

### Program Educational Objectives

1. Train future teachers and researchers of the Higher Education sector.

### Program Outcomes

- a. Graduates will be able to teach within the Higher Education sector, conduct and produce scientific research related to English literature and linguistics.

### Degree Requirements

|                                                    |           |
|----------------------------------------------------|-----------|
| <b>Specialization</b>                              | <b>60</b> |
| ELL700 - Seminar: Research Methodology             | 3         |
| ELL710 - Seminar: Modern English Literature        | 3         |
| ELL711 - Seminar: Special Topics in English Syntax | 3         |
| Ph.D. Dissertation                                 | 45        |
| Ph.D. Seminars by Doctoral College                 | 6         |
| <b>Total</b>                                       | <b>60</b> |

<sup>i</sup> Hybrid: Courses offered in French and/or English

## Ph.D. in French Language and Literature

### Mission

The program aims to train Ph.D. candidates to become university teachers and researchers in the fields of French and Francophone Literature or Linguistics.

### Program Educational Objectives

Train the future Higher Education teachers and researchers.

### Program Outcomes

- a. Ph.D. holders will be able to teach within the Higher Education field and to conduct and produce scientific research.

### Degree Requirements

|                                    |           |
|------------------------------------|-----------|
| <b>Specialization</b>              | <b>60</b> |
| Ph.D. Dissertation                 | 45        |
| Ph.D. Seminars by Doctoral College | 15        |
| <b>Total</b>                       | <b>60</b> |

## Ph.D. in History (Hybrid<sup>i</sup>)

### Mission

The course focuses on research techniques and the methodology of thesis writing. Students will master the methods of developing and substantiating the results of their on-site research.

Beside their research work, students deepen their knowledge of Lebanon's history, art history and historiography.

### Program Educational Objectives

1. Graduates will conduct thorough research, and master the use of sources and methods of writing a thesis.
2. Graduates will deliver oral presentations.

### Program Outcomes

- a. Students will classify, organize and exploit research sources.
- b. Defend their research in an optimized timeline.
- c. Pursue their research in a limited time.

### Degree requirements

<sup>i</sup> Hybrid: Courses offered in French and/or English

## Ph.D. in Language Sciences and Traductology

### Mission

The mission of the program is to train doctoral students in higher education and research in the fields of Language Sciences and Traductology.

### Program Educational Objectives

Training future university teachers of translation and translation studies.

### Program outcomes

- a. Students will be able to work in research centers.
- b. Be able to teach translation in secondary classes.
- c. Be able to teach translation at the University.
- d. Be able to teach language sciences at the University.
- e. Be able to translate and publish literary translations.
- f. Be able to develop and publish research in translation.
- g. Be able to teach contemporary translation theories.
- h. Be able to manage linguistic consulting firms.
- i. Be able to assist in the development of academic curricula.
- j. Be able to work in international organizations.

### Degree Requirements

|                                                      |           |
|------------------------------------------------------|-----------|
| <b>Specialization</b>                                | <b>60</b> |
| TRD731 - Seminar: Research Methodology               | 3         |
| TRD732 - Seminar: Interpretive Theory of Translation | 3         |
| TRD733 - Seminar : Pedagogical Translation           | 3         |
| TRD734 - Literary Translation Seminar                | 3         |
| Ph.D. Seminars by Doctoral College                   | 3         |
| Ph.D. Dissertation                                   | 45        |
| <b>Total</b>                                         | <b>60</b> |

## Ph.D. in Philosophy (Hybrid<sup>i</sup>)

### Mission

The mission of the program seeks to promote philosophy, as a discipline of instruction, communication and culture. The program offers the labor market multidimensional skills in philosophy.

The program offers all the necessary skills to achieve success and proposes an innovative research field falling within the questions of philosophy.

### Program Educational Objectives

To train future Higher Education teachers and researchers in philosophy.

### Program Outcomes

Ph.D. holders will be able to teach within the Higher Education field and conduct and produce scientific research.

### Degree Requirements

|                                    |           |
|------------------------------------|-----------|
| <b>Specialization</b>              | <b>60</b> |
| Ph.D. Seminars by Doctoral College | 15        |
| Ph.D. Dissertation                 | 45        |
| <b>Total</b>                       | <b>60</b> |

<sup>i</sup> Hybrid: Courses offered in French and/or English

## MATH, COMPUTER SCIENCE & IT

### Undergraduate Programs

#### Bachelor of Science in Actuarial and Financial Mathematics (English)

##### Accreditation

This program is accredited by the Applied and Natural Science Accreditation Commission of ABET, <http://www.abet.org>

Applied and  
Natural Science  
Accreditation  
Commission

##### Mission

Dedicated to its institutional beliefs both at the human and spiritual levels, the Department of Mathematics seeks to form undergraduate and graduate students that excel in the fields of fundamental mathematics as well as in Actuarial and Financial Mathematics. This is fulfilled through comprehensive educational programs, research and development and collaborations with academic institutions and professionals.

##### Program Educational Objectives

1. Graduates will be able to bring in front the potency fundamental concepts of calculus, linear algebra, probability, interest theory, and statistics to empower themselves obtaining new skills as needed in their employment or future education.
2. Graduates will be able to perceive the ultimate practices and theories of actuarial sciences and their application that enable them to establish a career as an actuary and provides risk management expertise to insurance companies, consultancies, government, regulatory bodies, investment firms and banking institutions.
3. By acquiring computing skills & essentials of programming languages, graduates will be able to provide pertinent answers to advanced actuarial problems as well as to analyze big data using the most contemporary software technologies in use by the actuarial industry professionals.

##### Student Outcomes

- a. An ability to apply knowledge of mathematics, science, and applied sciences.
- b. An ability to design and conduct experiments, as well as to analyze and interpret data.
- c. An ability to formulate or design a system, process, procedure or program to meet desired needs.
- d. An ability to function on multidisciplinary teams.
- e. An ability to identify and solve applied science problems.
- f. An understanding of professional and ethical responsibility.
- g. An ability to communicate effectively.
- h. The broad education necessary to understand the impact of solutions in a global and societal context.
- i. A recognition of the need for and an ability to engage in life-long learning.
- j. Knowledge of contemporary issues.
- k. An ability to use the techniques, skills, and modern scientific and technical tools necessary for professional practice.

##### Degree requirements

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

| General Education                                           | 30 |
|-------------------------------------------------------------|----|
| General Education - Arts and Humanities                     | 3  |
| General Education - Behavioral, Social Sciences and History | 6  |
| General Education - Civic Engagement                        | 2  |
| General Education - English Communication                   | 3  |
| General Education - Religious Sciences                      | 3  |
| General Education - Science and Health                      | 9  |
| General Education - Sports                                  | 1  |
| CSC204 - Information Technology & Networking                | 3  |

|                                                         |           |
|---------------------------------------------------------|-----------|
| <b>Common Core</b>                                      | <b>37</b> |

## Bachelor of Science in Computer Science (English)

*Offered in Main Campus Kaslik and partially in RUC Zahle*

### Accreditation

This program is accredited by the Computing Accreditation Commission of ABET, <http://www.abet.org>, the global accreditor of college and university programs in applied science, computing, engineering, and engineering technology.

### Mission

The mission of the Department of Computer Science and Information Technology is to graduate undergraduate and graduate students that excel in the fields of computing, networking, and database design, creation and management. This is fulfilled through comprehensive educational programs and research and development.

### Program Educational Objectives

1. Graduates will work successfully as members of professional software teams to address real work problems, as well as demonstrate strong communication skills.
2. Graduates will be prepared for careers in industry, consulting, teaching, and other fields related to computer science and to develop entrepreneurial mindset.

3. Graduates will provide full solutions for software problems from system design to solution development. They will be committed to lifelong and self-learning.
4. Graduates will have the ability to function and communicate effectively as ethically and socially responsible computer science professionals.

#### Program Outcomes

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.
2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.
6. Apply computer science theory and software development fundamentals to produce computing-based solutions [CS].

#### Degree requirements

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                                                    |           |
|------------------------------------------------------------------------------------|-----------|
| <b>General Education</b>                                                           | <b>15</b> |
| General Education - Arts and Humanities                                            | 3         |
| General Education - Social Sciences                                                | 3         |
| General Education - Civic Engagement                                               | 2         |
| General Education - English Communication                                          | 3         |
| General Education - Sports                                                         | 1         |
| General Education - Religious Sciences                                             | 3         |
| <b>Math and Sciences</b>                                                           | <b>28</b> |
| MAT202 - Algebra I                                                                 | 3         |
| MAT213 - Calculus III                                                              | 3         |
| MAT220 - Differential Equations                                                    | 3         |
| MAT310 - Linear Algebra                                                            | 3         |
| MAT418 - Numerical Methods                                                         | 3         |
| STA320 - Applied Probability and Statistics                                        | 3         |
| CHM212 - General Chemistry                                                         | 3         |
| PHY210 – General Physics                                                           | 3         |
| CHM377 – General Chemistry and Physics Laboratory OR                               | 1         |
| CHM270 - Laboratory of General Chemistry or PHY270 – Laboratory of General Physics |           |
| CSC211 - Discrete Methods                                                          | 3         |
| <b>Specialization</b>                                                              | <b>45</b> |

## Bachelor of Science in Information Technology (English)

### Accreditation

This program is accredited by the Computing Accreditation Commission of ABET, <http://www.abet.org>

### Mission

The mission of the Department of Computer Science and Information Technology is to graduate undergraduate and graduate students that excel in the fields of computing, networking, and database design, creation and management. This is fulfilled through comprehensive educational programs and research and development.

### Program Educational Objectives

1. Graduates will obtain positions as information technology professionals in various industries and government agencies involved in the creation, maintenance and use of computers, computer networks and computer information systems.
2. Information technology professionals must be able to work effectively in the planning, implementation, configuration, and maintenance of an organization's computing infrastructure. They will be committed for long-life and self-learning.
3. Graduates will be aware of cultural, social, legal, and ethical issues inherent in the discipline of computing.

### Student Outcomes

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.

2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.
6. Identify and analyze user needs and to take them into account in the selection, creation, integration, evaluation, and administration of computing-based systems [IT].

### Degree requirements

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                                                    |           |
|------------------------------------------------------------------------------------|-----------|
| <b>General Education</b>                                                           | <b>18</b> |
| General Education - Arts and Humanities                                            | 3         |
| General Education - Behavioral, Social Sciences and History                        | 6         |
| General Education - Civic Engagement                                               | 2         |
| General Education - English Communication                                          | 3         |
| General Education - Sports                                                         | 1         |
| General Education - Religious Sciences                                             | 3         |
| <b>Math and Sciences</b>                                                           | <b>16</b> |
| MAT202 - Algebra I                                                                 | 3         |
| MAT213 - Calculus III                                                              | 3         |
| STA320 - Applied Probability and Statistics                                        | 3         |
| CHM212 - General Chemistry or PHY210 - General Physics                             | 3         |
| CHM270 - Laboratory of General Chemistry or PHY270 – Laboratory of General Physics | 1         |
| General Education - Science and Health Elective                                    | 3         |
| <b>Specialization</b>                                                              | <b>54</b> |
| CSC212 - Computer Organization and Assembly Language                               | 3         |
| CSC214 - Programming I                                                             | 3         |
| CSC270 - Programming Laboratory I                                                  | 1         |
| CSC271 - GUI Programming                                                           | 1         |
| CSC314 - Object Oriented Programming                                               | 3         |
| CSC320 - Database Systems                                                          | 3         |
| CSC360 - Internet Technology                                                       | 3         |
| CSC368 - Project Management                                                        | 2         |
| CSC420 - Computer Networks                                                         | 3         |
| CSC438 - Internship Report                                                         | 1         |
| CSC300 - Hardware Technology                                                       | 3         |
| CSC312 - Advanced VB Programming                                                   | 3         |
| CSC319 - Technology and Networks Infrastructure                                    | 3         |
| CSC372 - Advanced Programming Lab                                                  | 1         |
| CSC417 - Human Computer Interaction                                                | 3         |

### Information Assurance and Cyber Security Certificate

The online Information Assurance and Cyber Security certificate, offered by the Norwich University's College of Graduate and Continuing Studies (NUCGCS) to students enrolled within the BE in Computer Engineering, BS in Computer Science and BS in Information Technology programs at USEK, aims to provide students with the essential tools needed to identify cyber threats; devise appropriate defense strategies; plan and conduct security assessments; and understand the ethical, legal, and regulatory environment as it relates to operating in cyberspace.

**NORWICH**  
UNIVERSITY

*Online*

The Information Assurance and Cyber Security certificate is comprised of four courses, delivered through Norwich University Online, a virtual and highly interactive learning platform, encompassing twelve credit hours (12). Upon completion of these four courses, students are granted the Minor in cybersecurity and Cyber Defense conferred by USEK, in addition to the Certificate in Information Assurance and Cyber Security conferred by Norwich University.

#### **IA340- Intro to Information Assurance (3 credit hours)**

This course provides an overview of design considerations involved with the security of site design. The course will also provide an understanding of the Levels of Trust and system accreditation/certification processes. Life cycle management of software, hardware, and physical plant, from planning through destruction will be examined and reinforced using case studies. Additionally understanding of the variety of security systems involving computers and networks and an ability to evaluate vulnerabilities will be discussed.

#### **IA342- Management of Information Assurance (3 credit hours)**

This course focuses on management of the information assurance process. Topics include human factors in reducing security breaches, security incident detection and response, remediation, management's role in information assurance, and other considerations in framing and implementing information assurance policies. The final section reviews current topics of particular interest and activity in the field of information assurance.

#### **CYBR410- Systems Assurance (3 credit hours)**

This course focuses on the design considerations involved with the security of site design. The course will also provide and understanding of the Levels of Trust and system accreditation/certificate processes. Life cycle management of software, hardware, and physical plant, from planning through destruction will be examined and reinforced using case studies. Additionally, understanding of the variety of security systems involving computers and networks and an ability to evaluate vulnerabilities will be discussed.

#### **CS407 Politics of Cyberspace (3 credit hours)**

This course explores the interrelations of modern computing and communications technology with politics, power, news, privacy, crime, and creativity. The course assumes only a rudimentary familiarity with the basic concepts and terminology of modern Internet usage and computing and is not a technology-focused course.

## Academic Minors

### Minor in Actuarial Studies (English)

#### Mission

The mission of the minor in Actuarial Studies is to provide students with the necessary knowledge to work in the general areas of actuarial science, mainly life and health insurance.

#### Program Educational Objectives

1. Students will be informed how to solve and model actuarial problems using fundamental concepts of calculus, probability, interest theory and statistics.
2. Students will be able to understand the fundamental practices and theories of actuarial sciences and their application, mainly in the fields of economy and insurance.

#### Program Outcomes

- a. Understand the basics of economy and their association with the actuarial sciences.
- b. Acquire and improve the knowledge of mathematical fundamentals.
- c. Introduce statistics and probability tools and their applications.
- d. Gain necessary knowledge to understand the basics of the actuarial theory.

#### Minor Requirements

|                                                         |           |
|---------------------------------------------------------|-----------|
| MAC400 - Actuarial Mathematics                          | 3         |
| MAC430 - Insurance Accounting and Mathematical Reserves | 3         |
| MAT213 - Calculus III                                   | 3         |
| MAT312 - Economical and Financial Calculus              | 3         |
| STA320 - Applied Probability and Statistics             | 3         |
| STA321 - Descriptive Statistics                         | 3         |
| <b>Total</b>                                            | <b>18</b> |

### Minor in Web and Mobile Programming (Hybrid<sup>i</sup>)

#### Mission

This minor provides students with a foundation in web development and experience of designing and creating compelling native applications for mobile devices.

#### Program Educational Objectives

1. Students will have a basic understanding of the concepts, processes, skills, and techniques used in the field of web and mobile design and software development.
2. Acquire a knowledge that will compliment many disciplines, adding a breadth and depth of perspective to other programs.
3. Have a broader level of understanding and the resources to think creatively and act as conceptual problem solvers.

#### Program Outcomes

- a. Students will provide basic solutions for web development.
- b. Students will provide basic solutions for mobile programming.
- c. Students will have the ability to understand programming from different perspectives including object oriented and imperative programming

#### Minor Requirements

|                                      |   |

## Graduate Programs

### Master of Science in Actuarial and Financial Mathematics (Hybrid<sup>i</sup>)

#### Mission

The main mission of this program is to prepare the students to become actuaries and gain exciting job opportunities in insurance companies, health insurances, provident funds institutions, banks, financial institutions as well as in audit offices and actuarial counseling. Students will also acquire a strong ability to perform advanced research in the field of actuarial and financial mathematics. Nowadays, the job of actuary is known as one of the more desirable jobs worldwide, as it offers a wide variety of career choices.

#### Program Educational Objectives

1. Graduates will have a detailed knowledge of the mathematics and statistics that form the core of actuarial calculations.
2. Proficiency in distinguishing and describing, in depth, many actuarial practice areas, and an understanding of the principles that govern the development of insurance products for those areas, including emerging trends.
3. The computer skills required to analyze data using the most current software tools employed by insurance industry leaders.
4. A developed research spirit and interest in the research novelties in the domain of actuarial and financial sciences.

#### Program Outcomes

- a. Students will recall advanced probability theories.
- b. Understand the financial mathematics and derivatives.
- c. Perform life contingencies models.
- d. Understand and model different types of insurance losses.
- e. Understand and classify the life and health insurance practices.
- f. Classify and apply data modeling methods.
- g. Recognize, classify and compute different pension plans.
- h. Deepen and apply computer knowledge and skills to the actuarial practices.
- i. Acquire the necessary knowledge in scientific research.

#### Degree requirements

|                                                                      |           |
|----------------------------------------------------------------------|-----------|
| <b>Common Core</b>                                                   | <b>12</b> |
| ENG510 - Advanced Academic English                                   | 2         |
| MAC510 - Individual Health Insurance                                 | 3         |
| MAC520 - Theory of Risk                                              | 3         |
| SCF600 - Research Methodology                                        | 1         |
| STA540 - Random Modeling and Introduction to Stochastic Calculations | 3         |
| <b>Specialization</b>                                                | <b>18</b> |
| MAC530 - Non-life Insurance                                          | 3         |
| MAC532 - Survival Models                                             | 3         |
| MAC601 - Special Topics in Actuarial and Financial Mathematics       | 1         |
| MAC602 - Special Topics in Actuarial and Financial Mathematics II    | 1         |
| MAC603 - Tutorial in Actuarial and Financial Mathematics             | 1         |
| MAC620 - Time Series and Financial Models                            | 3         |

<sup>i</sup> Hybrid: Courses offered in French and/or English

|---------------------------------------|-----------|
| MAC634 - Mathematics of Pension Plans | 3         |
| MAC641 - Financial Modelling          | 3         |
| <b>Capstone</b>                       | <b>6</b>  |
| MAC697A - Master Thesis               | 6         |
| <b>Total</b>                          | <b>36</b> |

## Master of Science in Computer Science (English)

### Mission

The mission of the department of computer science is to graduate undergraduate and graduate students that excel in the field of computing, networking, and database design, creation and management. This is fulfilled through comprehensive educational programs and research and development.

### Program Educational Objectives

1. Graduates will be ready for advanced careers in computer science and networking, and related fields, as well as further graduate study.
2. Graduates will provide full solutions for software problems from system design to solution development. They will be committed to lifelong learning.
3. Graduates will have the ability to function and communicate effectively as ethically and socially responsible computer science professionals.

### Program Outcomes

- a. An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution.
- b. An ability to design, implement, and evaluate a computer-based system, component, or program to meet desired needs.
- c. An ability to function effectively on teams to accomplish a common goal.
- d. An understanding of professional, ethical, legal, security and social issues and responsibilities.
- e. An ability to communicate effectively with a range of audiences.
- f. Recognition of the need for and an ability to engage in continuing professional development.
- g. An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modelling and design of computer-based systems in a way that demonstrates comprehension of the trade-offs involved in design choices

### Degree requirements

|                                           |                    |

| <b>Total</b>                                     | <b>36</b> |

## Master of Science in Cybersecurity and Cyberdefence (English)

*This program is offered in Collaboration with Université Bretagne Sud, leading to a double degree: Master in Cybersecurity and Cyberdefence conferred by USEK and a Master in Cybersecurity conferred by UBS.*

### Presentation

The mission of the MS in Cybersecurity and Cyber defense is to generate qualified cybersecurity professionals by providing them with the knowledge to design, plan and manage cyber systems to protect organizations, governments and infrastructures from the ever-changing security threats and infiltration techniques such as hackers, network outages, viruses and cyber-attacks.

### Program Educational Objectives

1. Graduates will be ready for advanced careers in computer science and networking, and related fields, as well as further graduate study.
2. Graduates will provide full solution for software problem from system design to solution development. They will be committed for long-life learning.
3. Graduates will have the ability to function and communicate effectively as ethically and socially responsible computer science professionals.

### Program Outcomes

- a. An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution.
- b. An ability to design, implements, and evaluates a computer-based system, component, or program to meet desired needs.
- c. An ability to function effectively on teams to accomplish a common goal.
- d. An understanding of professional, ethical, legal, security and social issues and responsibilities.
- e. An ability to communicate effectively with a range of audiences.
- f. Recognition of the need for and an ability to engage in continuing professional development.
- g. An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modelling and design of computer-based systems in a way that demonstrates comprehension of the trade-offs involved in design choices.

### Degree requirements

| CYB573 - Lab - Cybernatic Crises Simulation | 2         |
| CYB650 - Internship (240 hours)             | 1         |
| <b>Capstone</b>                             | <b>4</b>  |
| CYB670 - Master's Project I                 | 1         |
| CYB680 - Master's Project II                | 3         |
| <b>Total</b>                                | <b>36</b> |

## Master of Science in Mathematics (Hybrid<sup>i</sup>)

### Mission

The goal of the Master's program in mathematics is to educate each student in the foundations of advanced mathematics. In general, a student in the Master's program will fall into one of three categories: wishing to work in the private sector, wishing to teach mathematics in a school, or wishing to continue into a Ph.D. program in mathematics.

### Program Educational Objectives

1. Graduates will present a deep knowledge in the different fields of theoretical and applied mathematics.
2. Graduates will develop a mathematical logic that could be applied for problem modeling and solving in different areas of interest.
3. Graduates will acquire a vast scientific methodological approach to tackle mathematical research problems responding to the needs of different scientific fields.

### Program Outcomes

- a. Students will simulate problems in the advanced areas of numerical analysis.
- b. Model problems in the areas of functional analysis.
- c. Solve problems in the advanced areas of algebra.
- d. Understand the concepts of stochastic processes.
- e. Apply computer knowledge to solve numerical problems.
- f. Acquire the necessary knowledge in scientific research.

### Degree requirements

|                                                                      |           |
|----------------------------------------------------------------------|-----------|
| <b>Common Core</b>                                                   | <b>12</b> |
| ENG510 - Advanced Academic English                                   | 2         |
| MAT522 - PDE and Modeling                                            | 3         |
| MAT523 - Group Theory                                                | 3         |
| SCF600 - Research Methodology                                        | 1         |
| STA540 - Random Modeling and Introduction to Stochastic Calculations | 3         |
| <b>Specialization</b>                                                | <b>18</b> |
| MAT500 - Numerical Analysis and Optimization                         | 3         |
| MAT601 - Special Topics in Mathematics I                             | 1         |

| MAT623 - Distribution Theory and PDE                                 | 3         |
| MAT627 - Lie Algebra                                                 | 3         |
| <b>Capstone</b>                                                      | <b>6</b>  |
| MAT697A - Master Thesis                                              | 6         |
| <b>Total</b>                                                         | <b>36</b> |

<sup>i</sup> Hybrid: Courses offered in French and/or English

## MUSIC AND ARTS

### Undergraduate Programs

#### Bachelor of Arts in Cinema and Television (English)

##### Mission

The program is founded on the belief that art is a fundamental force in national and international culture, and that one of the primary standards by which societies are judged is the quality, creative freedom, critical insight, and formal and technical innovation of the visual art they produce.

The mission of the program is to provide students with the best possible education in the field of visual arts. The department has a long distinguished history of forming artists of the highest caliber. A full-time faculty of working artists in conjunction with a diverse cross-section of accomplished visiting artists collaborate to foster an environment where the unique talents and perspectives of individual students can merge and flourish.

##### Program Educational Objectives

1. Graduates from the Bachelor program will work successfully as professional members of the media industry. They should be able to work in a broad range of fields in the media that involve screenwriting, directing, editing, recording and designing sound, production, photojournalism, commercial and artistic photography, television, advertising, web and mobile applications.
2. Graduates will have the ability to produce their own personal work, whether it be fiction film, experimental film, drama, news, TV commercials, documentary film, animated films, still photography, and websites.
3. Graduates will have the ability to function and communicate effectively in the field of media as well as work as ethical and social individuals in society at large.

##### Program Outcomes

- a. Students will gain an understanding of major cultural and esthetic movements that have developed throughout history and their influence on art in general and visual media in particular (cinema, TV, photography, and web).
- b. Understand the notion of visual media as an art form focusing on the essentials of style and language in order to communicate ideas.
- c. Understand the basics of a number of analytical methods and their application to a variety of visual productions.
- d. Understand the essential components that constitute images (still, moving, and computer generated) by manipulating such elements as optical devices, framing, composition, and lighting.
- e. Demonstrate an ability to use the technical tools of the various disciplines of the visual arts including directing, producing, editing, cinematography, production design, acting, writing, and sound.
- f. Acquire knowledge of visual effects processes including basic compositing, green screen with live action integration, motion capture, digital effects animation (2D, 3D), rendering, layout, and coloring.
- g. Demonstrate an ability to produce and direct different types of visual media (fiction, experimental, drama, news, TV ads, documentary, still photography, websites, and animation).
- h. Function effectively on an individual as well as a group level in order to produce a communicative visual product.

##### Degree Requirements

This program requires 102 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |           |
|-------------------------------------------------------------|-----------|
| <b>General Education</b>                                    | <b>30</b> |
| General Education - Behavioral, Social Sciences and History | 9         |
| General Education - Civic Engagement                        | 2         |
| General Education - English Communication                   | 3         |
| General Education - Quantitative Reasoning                  | 3         |
| General Education - Science and Health                      | 3         |
| General Education - Sports                                  | 1         |

|                                                    |                    |
|----------------------------------------------------|--------------------|
| General Education - Religious Sciences             | 3                  |
| PHO224 - Introduction to Photography               | 3                  |
| THT280 - Introduction to Acting                    | 3                  |
| <b>Common Core</b>                                 | <b>36</b>          |
| FLM240 - History of American Cinema                | 3                  |
| FLM241 - History of European Cinema                | 3                  |
| FLM316 - Introduction to Scriptwriting             | 3                  |
| FLM317 - Introduction to Film Directing            | 3                  |
| FLM319 - Introduction to Cinematography            | 3                  |
| FLM322 - Film Language                             | 3                  |
| PHO225 - Advanced Black and White                  | 3                  |
| PHO226 - Introduction of Image Technology          | 3                  |
| PHO235 - Introduction to Photography Story-telling | 3                  |
| TLV351 - Introduction to Editing                   | 3                  |
| TLV352 - Advanced Editing                          | 3                  |
| TLV431 – Introduction to Sound Recording           | 3                  |
| <b>Specialization - option: Cinema</b>             |                    |
| <b>Mandatory</b>                                   | <b>24</b>          |
| AUV451 - Sound Design                              | 3                  |
| FLM321 - Advanced Cinematography                   | 3                  |
| FLM344 - Theory and Aesthetics of Film             | 3                  |
| FLM416 - Advanced Scriptwriting                    | 3                  |
| FLM417 - Advanced Directing                        | 3                  |
| FLM441 - Sound Theory of Film                      | 3                  |

## Bachelor of Arts in Conservation, Restoration of Cultural Property & Sacred Art (Hybrid<sup>i</sup>)

### Mission

Considering the richness and the diversity of the Lebanese cultural and artistic heritage in general, and the religious cultural goods in particular, the Bachelor of Arts in Conservation, Restoration of Cultural Property & Sacred has been created in order to meet the specific and urgent needs to preserve and restore this national heritage. The curriculum provides all the theoretical and practical knowledge related to the preservation, protection, and documentation of painted artworks on fabrics and wooden support.

### Program Educational Objectives

1. Graduates will be able to analyze the historical, artistic and scientific values of an artwork, and propose a restoration/preservation study.
2. Graduates will possess the ability to complete a restoration or conservation project on any artwork made on fabrics or wooden support.
3. Graduates will be capable to understand the value of the sacred art item, and will contribute to the preservation of the national cultural goods.

### Program Outcomes

- a. Preparing a conservation study which includes the description of the item, the method that will be followed, the materials that will be used and the intervention proposals and measures.
- b. Acquiring basic knowledge in restoring and conserving an artifact and developing technical, artistic and scientific abilities and methodology to safely execute the proposals of a preservation study.
- c. Applying directly and effectively the scientific, technological and artistic knowledge and skills on an artwork made on fabrics or wooden support.
- d. Explaining the techniques, media and iconography of any sacred art item using the appropriate vocabulary.

### Degree Requirements

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                          |           |
|--------------------------|-----------|
| <b>General Education</b> | <b>30</b> |
|--------------------------|-----------|

<sup>i</sup> Hybrid: Courses offered in French and/or English

|                                                          |                    |
|----------------------------------------------------------|--------------------|

## Bachelor of Arts in Conservation, Restoration of Cultural Property & Sacred Art - Emphasis: Sacred Art (Hybrid<sup>i</sup>)

### Mission

Courses of the Sacred Art program are available exclusively at the main campus of Kaslik. The richness of the Syro-Antiochean heritage, its cultural diversity and the need to carry out necessary restorations and make the discipline better known, led to the foundation of the Department of Sacred Art, Conservation and Heritage, which cooperates with various Schools and Institutes of USEK, while also maintaining contact with similar institutes in local and foreign universities.

### Program Educational Objectives

1. Graduates will be able to carry out iconography projects (design and execution).
2. Contribute to restoration of icons and paintings.
3. Carry out stained glass projects (design and execution).
4. Carry out mosaics projects (design and execution).
5. Conduct pottery and ceramics projects (design and execution).
6. Perform liturgical design and styling.
7. Undertake engraving projects (design and execution).
8. Carry out research, use documentation and conduct teaching assignments.

### Program Outcomes

- a. An ability to apply technical skills in applied arts.
- b. An ability to restore icons according to ancient traditional techniques.
- c. An ability to understand, describe and analyze a sacred artwork.
- d. An ability to create new sacred artwork projects.
- e. An ability to identify and compare the different artistic ecclesiastical traditions.
- f. An ability to produce documentation on a subject related to sacred art.

### Degree Requirements

This program requires 104 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |           |
|-------------------------------------------------------------|-----------|
| <b>General Education</b>                                    | <b>30</b> |

## Bachelor of Arts in Higher and Specialized Music Education (Hybrid<sup>i</sup>)

### Emphasis

- Music Composition
- Musical Instrument
- Singing (Arabic Singing / Occidental Classical Singing)
- Solfeggio/Dictation

### Mission

The School of Music and Performing Arts at USEK is committed to preparing, inspire and motivating students for excellence in professional careers in performance, composition and training.

The school provides a unique music culture and fosters the highest standards of teaching and supports the establishment of creative engagement through its own accomplishments, the work of its department members and staff and the achievement of its graduates.

---

<sup>i</sup> Hybrid: Courses offered in French and/or English

The school strives to meet the educational needs of its diverse students through instruction, performance, scholarship, and public service; and generates creative music activities that have local, national and international significance.

#### **Program Educational Objectives**

1. Graduates will meet standards of musical performance (through applied music studies, ensembles and master classes).
2. Graduates will demonstrate competence in content-based areas of music history and analysis, advanced theory and musicianship, and music technology.
3. Graduates will demonstrate competence in skill-based areas of ear training, sight singing, improvisation, composition and conducting.
4. Graduates will demonstrate a working knowledge (an appropriate level of technical and interpretative performance skills), repertory in their major and performing skills - completely and expressively and providing leadership as a soloist, and as a member of performing ensembles.
5. Graduates will demonstrate the ability to apply creative approaches to problem-solving and self-directed study, to conceive and realize musical programs and events.

#### **Program Outcomes**

- a. Student will develop skills and understanding of music language and composition in a variety of styles, periods, and genres in both Western European tradition and Non-Western cultures.
- b. Develop skills of criticism and defend musical judgment, with reference to contextual meaning and aesthetic value in their own work, and the work of others.
- c. Develop a comprehensive knowledge and understanding of Western musical history and its analysis, and for the Arab and Lebanese music traditions.
- d. Develop technical skills and musical awareness for performance and leadership of both small and large choirs.
- e. Develop knowledge and skills in the use of technology, as it applies to notating, arranging, recording, and composing music.
- f. Develop a comprehensive knowledge and understanding of musical instruments, their classification systems, and the technical aspects related to their constructions and sound qualities and their use and importance in a composition.
- g. Develop knowledge and understanding of a variety of music businesses and industry practices.
- h. Develop a working knowledge of music as it relates to and enhances the theater and religious experience.
- i. Develop an acute ability to hear, analyze, read, write, and harmonize music at a basic level.
- j. Acquire sufficient understanding of advanced music theory, musical forms, processes, and structures, and use this knowledge in compositional and performance contexts.
- k. Develop knowledge and skills on a major instrument or voice, and the ability to read at sight.
- l. Develop skills that prepare them for careers in musical performance and private teaching of performance, and advanced study and independent practice, including significant technical mastery to solve professional problems, and a coherent set of artistic/intellectual goals that are evident in their work.
- m. Acquire artistic and technical skills, collaborative competence, and knowledge of repertory requisite for artistic self-expression in his major performance area.
- n. Develop an acute ability to identify and work conceptually with the elements of music at an advanced level.
- o. Develop a background in music and musicianship that prepares them for a wide range of further educational and vocational activities that include solfeggio and dictation as a basic component.

#### **Degree Requirements**

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                         |           |
|-----------------------------------------|-----------|
| <b>General Education</b>                | <b>30</b> |
| General Education - Arts and Humanities | 6         |

|                                                                             |                     |
|-----------------------------------------------------------------------------|---------------------|
| General Education - Behavioral, Social Sciences and History <sup>i</sup>    | 3                   |
| General Education - Civic Engagement                                        | 2                   |
| General Education - English and French Communication                        | 6                   |
| MUS243 - History of Lebanese Music                                          | 3                   |
| General Education - Quantitative Reasoning                                  | 3                   |
| General Education - Religious Sciences                                      | 3                   |
| General Education - Science and Health                                      | 3                   |
| General Education - Sports                                                  | 1                   |
| <b>Common Core</b>                                                          | <b>33</b>           |
| MUG330 - Music Languages                                                    | 2                   |
| MUG335 - Musical Acoustics                                                  | 3                   |
| MUSC210 - Choral Singing I                                                  | 1                   |
| MUSC215 - Choral Singing II                                                 | 1                   |
| MUSC220 - Music Critique I                                                  | 1                   |
| MUSC225 - Music Critique II                                                 | 1                   |
| MUSC246 - Arab Music I                                                      | 3                   |

## Bachelor of Arts in Music (Hybrid<sup>i</sup>)

<sup>i</sup> Hybrid: Courses offered in French and/or English

**Emphasis**

- Musicology
- Music Education

**Mission**

The School of Music and Performing Arts is committed to developing confident, creative, and skilled musicians, researchers, historians of music and ethnomusicologists.

The school provides opportunities for students of all majors to enhance their musical knowledge and skill, through participation in a wide variety of academic courses, performance studies, and field experiences.

As a vital part of the University, the school promotes the musical arts of regional, national and international communities within the University.

**Program Educational Objectives**

1. Graduates will be engaged in active music making and a good selection of presentations.
2. Graduates will demonstrate desire and ability to generate innovative ideas and use effective means of communicating them.
3. Graduates will show a mature, confident, analytical and critical approach to current activities in music and the media, which is based on an awareness and understanding of broader cultural issues.

**Program Outcomes**

- a. Student will develop knowledge and skills on a major instrument or voice and the ability to sight read
- b. Develop skills and understanding of music language and composition in a variety of styles, periods, and genres, in both Western European tradition and non-Western cultures.
- c. Develop skills of criticism and defend musical judgment, with reference to contextual meaning and aesthetic value in own work, and the work of others.
- d. Develop a comprehensive knowledge and understanding of Western musical history and its analysis, and for Arab and Lebanese music traditions.
- e. Develop technical skills and musical awareness for performance and leadership of both small and large choirs.
- f. Develop knowledge and skills in the use of technology as it applies to notating, arranging, recording, and composing music.
- g. Develop a comprehensive knowledge and understanding of musical instruments; their classification systems, and the technical aspects related to their constructions and sound qualities and their use and importance in a composition.
- h. Develop a working knowledge of music as it relates to and enhances the theater and religious experience.
- i. Develop and demonstrate understanding and appreciation of diverse non-Western and Ethnic music traditions. Specific for the Musicology Emphasis.
- j. Develop research skills and the foundational background necessary to explore the social and cultural development of music from around the globe and demonstrate understanding of musical traditions and their influences.
- k. Develop an understanding of the history of sacred music and the ability to interpret various genre and styles of occidental and oriental sacred chants
- l. Develop an understanding of child growth and development and the principles of learning, related to music.
- m. Develop the ability to teach music to a variety of age groups in a range of classroom and ensemble settings (K-12 and special learners) in an effective management of classes based on methods and materials currently utilized in music education settings.

**Degree Requirements**

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                         |           |
|-----------------------------------------|-----------|
| <b>General Education</b>                | <b>30</b> |
| General Education - Arts and Humanities | 6         |

|                                                                          |                    |
|--------------------------------------------------------------------------|--------------------|
| General Education - Behavioral, Social Sciences and History <sup>i</sup> | 3                  |

## Bachelor of Arts in Music – Music Industry (Hybrid<sup>i</sup>)

### Mission

The School of Music and Performing Arts is committed to providing each student with an understanding of the fundamentals of business within the music industry from a musician's perspective. Music industry students will be aware of legal, financial, artistic, and ethical issues, in addition to management (artists, events, technology, etc.), and music industry domains that face a fast-changing world. Both the University and the school will provide a real-world experience with a diversity of musicians and professionals, along with the introduction to many business owners / companies in the country and worldwide, in addition to a bachelor degree. The school provides opportunities for students to enhance their musical knowledge and skill through participation in a wide variety of academic courses, performance studies, and field experiences.

As a vital part of the University, the school promotes the musical arts of regional, national and international communities within the University.

### Program Educational Objectives

Graduates will be able to:

1. Engage in active music production.
2. Apply and analyze the basic copyright protection afforded to musicians, publishers and master recording owners.
3. Explain and apply industry-related contracts, reviews and agreements.
4. Assess the dynamics of the music industry, including the issues that relate to revenue generation, different industry players and futuristic views, trends and development of the domain.
5. Create a link between the scientific and artistic competencies of music and musicians and achieve the milestone in the music industry domain.
6. Build teams, managers and leaders in the domain of the music industry.

### Program Outcomes

Students will:

- a. Develop knowledge and skills on a major instrument or voice and the ability to sight-read

<sup>i</sup> Hybrid: Courses offered in French and/or English

- b. Develop skills and understanding of music language and composition in a variety of styles, periods, and genres in both western European tradition and non-Western cultures.
- c. Develop skills of criticism and defend musical judgment, with reference to contextual meaning and aesthetic value in own work and the work of others.
- d. Develop a comprehensive knowledge and understanding of Western musical history and its analysis, and of the Arab and Lebanese music traditions.
- e. Develop technical skills and musical awareness for performance and leadership of both small and large choirs.
- f. Develop knowledge and skills in the use of technology as it applies to notating, arranging, recording, and composing music.
- g. Develop a comprehensive knowledge and understanding of musical instruments, their classification systems, and the technical aspects related to their constructions and sound qualities and their use and importance in a composition.
- h. Demonstrate their technical proficiency with production tools and associated techniques by completing specified projects.
- i. Design and develop business, management, marketing and operations of the music industry and related firms.
- j. Assess copyright and intellectual property laws related to music, in general, and to the music industry in particular.

### Degree Requirements

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                                          |           |
|--------------------------------------------------------------------------|-----------|

## Bachelor of Arts in Performing Arts (English)

### Mission

The Bachelor of Performing Arts is designed to give the student a broad-based understanding of the theatrical arts. Through study in this degree program, the student will develop both cognitive and affective skills in acting, dramatic writing, directing, lighting design, scenic design, costume design, construction and criticism as well as other aspects of Theater performance and Theater production.

### Program Educational Objectives

1. Graduates will acquire specific knowledge about the history of theater and shows, theories and practices of the scene and become familiar with the news of contemporary performance and new forms of expression in this field.
2. Develop the acuity of judgment both in terms of creation and in the receiving plan.
3. Acquire multiple stage technical performance.
4. Learn to implement all the means to produce a complex spectacle, whether of body or voice, text (create, write or adaptation), or representation (choice of scenic place, creation a set design, implementation of sound, light or insertion of photographic or cinematographic images).

### Program Outcomes

- a. Students will be familiar with the types of spectacles and literary and scenic components. They will have to distinguish a spectacular kind of a subgenre, and to recognize the aesthetic trend to which it relates.
- b. Analyze methodically both a literary (read) and scenic dramatic work (presented on stage), identify scenic choice of directors, and to critically study on a show.

- c. Perform in shows of various kinds (theatrical play, play on camera, puppet animation, mime show, clown show and dancing etc.).
- d. Design a show, draw up the specifications for its production, plan rehearsals, recognize the difficulties it may be facing, identify possible solutions to the problems of implementation, team work and finally to mount a single show.

### Degree Requirements

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |                    |

## Academic Minors

### Minor in Musicology (Hybrid<sup>i</sup>)

#### Mission

The School of Music and Performing Arts is committed to developing confident, creative, and skilled musicians, researchers, historians of music and ethnomusicologists.

The school provides opportunities for students of all majors to enhance their musical knowledge and skill through participation in a wide variety of academic courses, performance studies, and field experiences.

As a vital part of the University, the school promotes the musical arts within the university, regional, national, and international communities.

#### Program Educational Objectives

Upon completion of the program students will:

1. Be able to appreciate different styles and works.
2. Demonstrate the use of music terminology as it applies to the music styles.
3. Demonstrate knowledge of music from other cultures.
4. Show a mature, confident, analytical and critical approach to current activities in music and the media which is based on an awareness and understanding of broader cultural issues.

#### Program Outcomes

- f. Develop and demonstrate understanding and appreciation of diverse non-Western music.
- g. Develop research skills and foundational background necessary to explore the social and cultural development of music from around the globe and demonstrate understanding of musical traditions and their influences.
- h. Develop an understanding of the history and tradition of sacred and liturgical music through different periods of music development.
- i. Develop the ability to interpret various genre and styles of occidental and oriental sacred chants and to prepare a repertoire for specific religious performances and ceremonies.
- j. Develop knowledge and skills in understanding the basic physical concepts of musical acoustics (waves, simple vibrations, principle of superposition and complex waveforms) and understanding the perception of sound and music

#### Minor Requirements

## Minor in Photography (English)

### Mission

The mission of the minor in photography is to develop professional image-makers through student-centered studies in history, technology and practical production of photographic images.

### Program Educational Objectives

1. Students will be able to produce a set of creative work suitable for seeking professional opportunities in the field of photography.
2. Students will communicate their ideas professionally and connect with their intended audience using visual and written presentation skills relevant to their field.
3. Students will execute technical, esthetic, and conceptual decisions based on an understanding of photography principles.

### Program Outcomes

- a. Students will learn conceptual and problem solving skills.
- b. Students will acquire technical lighting skills.
- c. Students will learn technical camera capture skills.
- d. Students will learn about digital imaging and printing.

### Minor Requirements

## Minor in Theater (Hybrid<sup>i</sup>)

### Mission

The mission of this minor is to put Theater in the scope of actuality, in concomitance with the social, economic, cultural and political changes, since theater is mainly the reflection of society. In order to do this, this option aims to ensure a solid theoretical teaching in terms of history related to shows, methodology of analysis, aesthetics, etc. providing workshops for plays, dance, mime, and puppets.

### Program Educational Objectives

1. To acquire specific knowledge of the history of theater and spectacles, theories and practices of the stage and to get familiarized with the actuality of contemporary spectacle and with the new forms of expression in this field. Demonstrate the use of music terminology as it applies to the music styles.
2. To develop the acuity of judgment both in terms of creation and in terms of reception.
3. To acquire multiple scenic technical performances.

<sup>i</sup> Hybrid: Courses offered in French and/or English

**Program Outcomes**

- The student will be familiar with the natures of the shows and its literary and scenic components. He will have to distinguish a spectacular genre from a subgenre, as well as to recognize the aesthetic current to which it is connected.
- The student will be able to analyze methodically both a drama literary artwork (read) as well as a scenic artwork (presented on stage), to identify the scenic choices of the directors, and to conduct a critical study on a show.
- The student will be invited to perform in various kinds of shows (theatrical play, puppet animation, mime show, clown and dancing show ... etc).

**Minor Requirements**

|                                           |           |

**Graduate Programs****Master of Arts in Cinema and Television (English)****Mission**

The program is founded on the belief that art is a fundamental force in national and international culture, and that one of the primary standards by which societies are judged is the quality, creative freedom, critical insight, and formal and technical innovation of the visual art they produce.

The mission of the program is to provide students with the best possible education in the field of visual arts. The department has a long distinguished history of forming artists of the highest caliber. A full-time faculty of working artists in conjunction with a diverse cross-section of accomplished visiting artists collaborate to foster an environment where the unique talents and perspectives of individual students can merge and flourish.

### Program Educational Objectives

1. Graduates from the Master program will work successfully as professional members of the film production process. They should be able to work in a broad range of positions involving tasks such as writing a scenario, directing, editing, recording and designing sound, and production.
2. Graduates will have the ability to produce their own personal fiction films.
3. Graduates will have the ability to function and communicate effectively in the field of cinema as well as work as ethical and social individuals in society at large.

### Program Outcomes

- a. Students will acquire knowledge of critical and theoretical methodologies and their application to film.
- b. Demonstrate in critical essays and oral presentations an ability to analyze films via a variety of theoretical perspectives while using the critical vocabulary and methodologies of the discipline.
- c. Develop a thorough understanding of the fundamental disciplines inherent in motion picture including acting, producing, directing, writing, cinematography, editing, and sound.
- d. Generate and develop ideas for film that include writing from personal experience, and translating these ideas via visual and aural acuity and technical excellence.
- e. Function effectively on an individual as well as a group level in order to produce a communicative cinematic product.

### Degree Requirements

## Master of Arts in Conservation, Restoration of Cultural Property & Sacred Art (Hybrid<sup>i</sup>)

### Mission

Courses of the program are available exclusively at the main campus of Kaslik. The richness of the Syro-Antiochean heritage, its cultural diversity and the need to carry out necessary restorations and make the discipline better known, led to the foundation of the Department of Sacred Art, Conservation and Heritage, which cooperates with various Faculties and Institutes of USEK, while also maintaining contact with similar institutes in local and foreign universities.

### Program Educational Objectives

1. Graduates will be able to conduct advanced research on iconography and sacred art
2. Graduates will be able to work in the teaching field.

### Program Outcomes

- a. Students will develop an ability to contribute to the conservation of national heritage.
- b. Organize a global and reliable documentation of the Church of Antioch.
- c. Promote research on the Church of Antioch.
- d. Encourage advanced studies on local artists and heritage.
- e. An ability to carry out advanced research on the local and oriental iconography.

## Master of Arts in Performing Arts (Hybrid<sup>i</sup>)

### Mission

Performing Arts, Master Degree, enable students to produce high quality artworks and performances, compatible with theories of academic criteria. The basic goal is to educate Masters candidates under the guidance of qualified instructors. Graduate students complete a program with a rigorous study of critical theory, textual history, elements of production (directing, acting, choreography, writing, and design) and embodied research that aim to produce enriched thesis / projects generating an expanded perspective and awareness.

### Program Educational Objectives

1. Graduates from the Master program will work successfully as professional members of the theatrical production process. They should be able to work in a broad range of positions involving tasks such as writing a scenario, directing, acting, and production.
2. Graduates will have the ability to produce their own personal pieces of theater.
3. Graduates will have the ability to function and communicate effectively in the field of theater as well as work as ethical and social individuals in society at large.

### Program Outcomes

- a. Students will acquire knowledge of critical and theoretical methodologies and their application to theater.
- b. Demonstrate in critical essays and oral presentations an ability to analyze films via a variety of theoretical perspectives while using the critical vocabulary and methodologies of the discipline.
- c. Develop a thorough understanding of the fundamental disciplines inherent in theater including acting, producing, directing, lighting, and sound.
- d. Generate and develop ideas for theater that include writing from personal experience, and translating these ideas via acting, directing and technical excellence.
- e. Function effectively on an individual as well as a group level in order to produce a communicative theatrical product.

## Doctoral Programs

### Ph.D. in Conservation, Restoration of Cultural Property & Sacred Art (Hybrid<sup>i</sup>)

#### Mission

The mission of the program is to offer postgraduate students, through various seminars, the ability to perfect their research skills and critical thinking in the field of Sacred Arts, in order to contribute to the enrichment of the history of the artistic local heritage.

#### Program Objectives

1. PHD holder will be able to conduct and publish scientific research.
2. PHD holder will be able to classify, organize, and exploit their research sources.
3. PHD holder will be able to teach within the Higher education field.

#### Degree Requirements

|                                    |           |
|------------------------------------|-----------|
| <b>Specialization</b>              | <b>60</b> |
| Ph.D. Seminars by Doctoral College | 15        |
| Ph.D. Dissertation                 | 45        |
| <b>Total</b>                       | <b>60</b> |

<sup>i</sup> Hybrid: Courses offered in French and/or English

## Ph.D. in Music and Ph.D. in Higher and Specialized Music Education (Hybrid<sup>i</sup>)

The program seeks to help student become self-directed, evidence-based learners through the ability to access and critically evaluate the reliability of all databases and resources related to music subjects. Originality will lie more in the way in which theoretical and conceptual understandings are applied in managerial and organizational contexts than in simple extension of those theories and concepts.

In addition to the applied character of the doctorate thesis, it is also action-based and transformational in that students will be challenged to change their managerial practices.

### Degree Requirements

|                       |           |

| <b>Specialization</b> | <b>60</b> |
| Ph.D. Seminars        | 15        |
| Ph.D. Dissertation    | 45        |
| <b>Total</b>          | <b>60</b> |

## Ph.D. in Visual Arts (Hybrid<sup>i</sup>)

### Mission

The Ph.D. program in visual arts challenges the traditionally conceived borders between creative and critical practice. The program enables potential dialogue between creative practice and theoretical knowledge as related forms of intellectual work and provides the conditions for students to realize a wide range of possible projects, including those that exist across the traditional divides of critical studies and production. Focusing on a diverse range of cultural production that includes cinema, television, video art, the Ph.D. program participants interrogate the historical, aesthetic, political, ideological, and technological aspects of these media forms across a range of international contexts, investigating their points of connection and convergence as well as their relationship to broader cultural and historical change. The program thus prepares students for intellectually informed creative practice as well as theoretical and critical production in a range of environments, not limited to traditional academic contexts.

**Integrating critical and creative practice:** In our research and teaching, we explore the intersections of what have been, or have become, separated modes in our field of media studies: theory and practice. We seek to nurture dialogue between creative practice and scholarly inquiry as related forms of intellectual work.

**Working across media:** Our approach to media studies and media production incorporates a range of technologies and platforms, stressing their historical and intertextual relationships.

**Pursuing new modes of social and political engagement:** Media literacy, broadly defined, is an essential component of participation in our increasingly mediated lives. A new generation of media makers and media interpreters has the power to re-shape the world.

**Fostering global cultural citizenship:** Making and studying media today necessitates a global and historical perspective. By thinking and working across boundaries of nation, culture and identity, we are creating new forms of knowledge and new media forms that respect and investigate differences of race, class, gender, sexuality and nation.

### Program Educational Objectives

Upon program completion, graduates will:

1. Be prepared for employment in research/faculty.
2. Engage in and promote evidence-based practices through the application of rigorous methodology.
3. Link education research to policy and practice.
4. Provide leadership in the field by developing an independent line of ethical and culturally responsive research.
5. Contribute to development of the next generation of scholars.
6. Be able to influence school policy and reform.

### Program Outcomes

<sup>i</sup> Hybrid: Courses offered in French and/or English

Students who earn a Ph.D. in visual arts will gain the skills, knowledge, and understanding that will enable them to:

- a. Demonstrate knowledge of video and/or digital media production.
- b. Demonstrate critical thinking and analytical skills appropriate to doctoral work in to the discipline of film and digital media.
- c. Demonstrate research skills appropriate to doctoral work in the discipline of film and digital media.
- d. Demonstrate scholarly writing skills appropriate to doctoral work in the discipline of film and digital media

**Degree Requirements**

|                                    |           |

| Ph.D. Dissertation                 | 45        |
| <b>Total</b>                       | <b>60</b> |

**RELIGIOUS & ORIENTAL SCIENCES**

**Undergraduate Programs**

**Bachelor of Arts in Liturgy (Hybrid<sup>i</sup>)**

**Mission**

The mission of the program is to impart knowledge to students about the Universal Church and especially the Eastern Church.

Students profit from the scientific training that the program offers through its publications that tackles two parts: the offices and the ceremonies of the Universal Church and scientific studies.

**Program Educational Objectives**

The liturgy is not a collection of items that must be memorized and executed, but it is a science and a celebration. Hence, its degrees consist of giving a good level of a scientific education by highlighting the pastoral dimension of the liturgy.

**Program Outcomes**

Graduates of the Bachelor Degree will be entitled to the following positions:

- a. Involvement in religious life.
- b. Pastoral service in parishes and religious movements of the church (congregations, religious orders, youth chaplains, hospitals, prisons, etc.).
- c. Teaching catechesis in schools.

**Degree Requirements**

This program requires 97 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

| <b>General Education</b>                             | <b>12 out of 30</b> |
|------------------------------------------------------|---------------------|
| General Education - Arts and Humanities              | 3                   |
| General Education - Civic Engagement                 | 2                   |
| General Education - English and French Communication | 6                   |
| General Education - Quantitative Reasoning           | 3                   |
| General Education - Science and Health               | 3                   |
| General Education – Religious Sciences               | 3                   |
| General Education - Sports                           | 1                   |
| PSY201- Introduction to Psychology                   | 3                   |

## Bachelor of Arts in Religious and Pastoral Education (Hybrid<sup>i</sup>)

### Mission

Specialization in Religious and Pastoral Education introduces students to the realities of living faith, transmission of the Christian tradition and the maturing of religion and its pastoral at all stages of life.

It is of interest to both secular and religious persons eager to gain a thorough training in pastoral and religious knowledge.

### Program Educational Objectives

1. Graduates will be active in pastoral services in dioceses, parishes and religious movements (youth chaplaincy, hospitals, prisons, etc.).
2. Teaching catechesis in schools and universities.
3. Educators and trainers in educational institutions and centers for the moral and spiritual formation of society.
4. Researchers in the areas of training.
5. Enactment of liturgical celebrations in many Christian communities (Mass in East and sacramental theology and liturgy)

### Program Outcomes

- a. Students will acquire a first university degree in the field of pastoral intervention.
- b. Demonstrate a clear understanding of the features of contemporary culture that influence the various practices of faith education.
- c. Know how to use the Bible with relevance in the perspective of faith education (introduction to the Bible).
- d. Analyze and handle a religious text from the Church's teaching (evangelization and catechesis).
- e. Exercise practical and pastoral work in the ecclesiastical domain (pastoral and practical theology).
- f. Strengthen their trainer skills.
- g. Refine the observational capabilities of a pastoral practice and identify key issues.
- h. Deepen the spiritual dimension of life.
- i. Exercise a role of responsibility or intervention in relation to the transmission of the Christian tradition and maturation of faith (faith education, pedagogy and catechetical action).
- j. Provide a spiritual accompaniment and vocations.
- k. Energize group dynamics and leadership work (work with a group and make a group work).

### Degree Requirements

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |           |

## Online Diploma in Liturgy (Hybrid<sup>i</sup>)

### Mission

The mission of the Online Diploma in Liturgy is to spread the liturgical culture and to allow to the faithful to live their faith by practicing the liturgical habits and understanding their theological significations. The liturgy diploma provides students and believers with the liturgical culture necessary to understand and live their faith through the liturgical traditions and rites of the Church.

### Program Educational Objectives

1. Ensure the basic liturgical culture to the greatest number of believers through the Internet.
2. Allow believers and students who have completed their certificate in Internet Theological Formation to continue their religious education through the acquisition of a liturgical formation.

### Program Outcomes

- a. Understand and live the liturgical traditions.
- b. Live the faith through the liturgy.

### Degree Requirements

## SOCIAL & BEHAVIORAL SCIENCES

### Undergraduate Programs

#### Bachelor of Arts in Journalism and Communication

##### Accreditation

This accreditation commission of evalag, Evalag-Baden-Württemberg <http://www.evalag.de>, accredited this program and awarded the evalag international label for program accreditation.

##### Mission

This program is designed to prepare students to become professional media practitioners (reporters, editors, copywriters, designers and layout artists, etc.) and communication professionals. The curriculum will improve their techniques of expression and communication, and develop their capacities to understand, analyze and judge events and social phenomena, providing leading research and generating knowledge.

##### Program Educational Objectives

1. Acquire strong academic knowledge of the state of the art in journalism and communication.
2. Develop professional skills (writing, reporting, editing, shooting, filming...).
3. Practice journalism and communication in various types of media.

##### Program outcomes

- a. Students will use different techniques of expression in different contexts to elaborate a correct and coherent text in a target language.
- b. Collect, analyze and communicate information using specific methods in journalism.
- c. Implement audiovisual and multimedia technology, and demonstrate working knowledge to produce effective communication.
- d. Acquire necessary knowledge to understand and analyze social, political and historical events, as well as economic issues.
- e. Identify and employ ethical standards.
- f. Select and use appropriate communication strategies
- g. Integrate required knowledge and skills to be professional practitioners (writers, reporters, editors) using specific norms and techniques.
- h. Develop the ability to edit and write effectively for a variety of media.
- i. Produce a report summarizing experience during traineeship.
- j. Select and integrate theories of journalism in the work field.

##### Degree Requirements

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |           |

## Bachelor of Arts in Psychology (Hybrid<sup>i</sup>)

### Emphasis

- Clinical Psychology
- Industrial Psychology

### Accreditation

This accreditation commission of evalag, Evalag-Baden-Württemberg <http://www.evalag.de>, accredited this program and awarded the evalag international label for program accreditation.

### Mission

The program seeks to train competent people in various fields of study: cognitive, clinical, pathological, social, labor and development psychology. This education aims at giving human behavior a scientific explanation and understanding the psychic functioning that underlies it. The training helps students command, on the one hand, theoretical, methodological and practical knowledge. On the other hand, it prepares them to practice the profession of psychologist and

<sup>i</sup> Hybrid: Courses offered in French and/or English

researcher. These skills empower them to enter the labor market and gain access to higher education and research.

#### **Program Educational Objectives**

1. Graduates will make careers in guidance, counseling, support and psychological counseling within a pluralistic team in the different institutions; from early childhood to adulthood.
2. Graduates will make careers in the field of psychological practice in clinical and scholarly domains, in specialized rehabilitation and training centers, in hospitals or in prison centers for youths and adolescents.
3. Graduates will demonstrate the necessary skills to pursue a postgraduate course and excel in research.

#### **Program Outcomes**

- a. Students will define key concepts of the different domains of psychology, which constitute the basis of the bachelor's degree and introduce the Master's program.
- b. Distinguish the different theoretical perspectives of social psychology, develop conceptual skills of communication and put into practice group functioning.
- c. Rigorously adopt a methodological and statistical analysis of the scientific approach in psychology, which combines the epistemological, ethical, technological and static principles.
- d. Recognize the foundations of the psychology of child, adolescent and adult development, and highlight the relative characteristics of each stage.
- e. Correlate the basic notions of psychoanalysis and target the relationship between theory and analytical practice in clinical settings.
- f. Examine the personality across the different theoretical and psychometric perspectives of psychology.
- g. Delineate psychopathology existent from early childhood to adulthood.
- h. Adopt the models and methods of consulting advice and guidance toward education, training and careers.
- i. Analyze through cognition, biology and neurobiology, the psyche and human behavior, normal and pathological in its environment.
- j. Validate the clinical approach, maintenance procedures and clinical examination and the method of testing at the level of the child, adolescent and adult.
- k. Put into practice the acquired knowledge and evaluate training.
- l. Put into practice the fundamental concepts of ergonomics while placing them as priority work-health and work-time relations and analyzing sociologically the institutional environment.
- m. Develop psychological management of management issues, developments of labor and their consequences.

#### **Degree Requirements**

## Bachelor of Arts in Social Sciences (Hybrid<sup>i</sup>)

### Accreditation

This accreditation commission of evalag, Evalag-Baden-Württemberg <http://www.evalag.de>, accredited this program and awarded the evalag international label for program accreditation.

### Mission

The mission of the Social Science degree program is to train undergraduate students with skills to enable them to be teachers and future social actors who drive their companies toward a socially equitable development - civically, economically and politically. The students learn to deal with social issues and examine all forms of Middle Eastern and Mediterranean policy. The Bachelor's training prepares the students for research, particularly that concentrating on the exploration of their society; to engage in it as a promoter of progress, peace and development. These skills empower students to integrate into the labor market, access higher education and excel in research.

<sup>i</sup> Hybrid: Courses offered in French and/or English

**Program educational Objectives**

1. Graduates will become teachers or trainers in the fields of social sciences in schools and public and private institutional spaces.
2. Graduates will become coordinators of research projects.
3. Graduates will become administrators responsible in the areas of planning and evaluation pertaining to action and social, socio- economic and cultural politics.

**Program Outcomes**

- a. Students will identify the various social science disciplines through their history and their theoretical and conceptual orientations.
- b. Define the flows and sociological concepts that form the basis of the Bachelor's degree and introduce the Master's program in Social Sciences.
- c. Apply the concepts and theoretical approaches in the areas of specialization in social sciences.
- d. Interpret theories of communication perceived as psycho-sociological objects and apply specific communication practices to the group or the general public.
- e. Recognize the construction process of personality through the gradual conquest of self and in interaction with the social environment.
- f. Adopt the methods, approaches and techniques of social sciences research within an epistemological and ethical perspective.
- g. Implement statistical techniques of data collection and interpretation of results.
- h. Conduct a survey and analyze the demographic data.
- i. Implement the coordination of components of a research project.
- j. Sociologically analyze a concrete organization and its institutional environment and distinguish the existing associative dynamics in Lebanon.
- k. Correlate socio-economic theories and financial development and conflict with the components of business and community settings.
- l. Validate training with a view to teaching or a social function.

**Degree Requirements**

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |                   |

## Academic Minors

### Minor in Psychology (Hybrid<sup>i</sup>)

#### Mission

The minor in psychology focuses on human behavior and psychological functioning. Our mission is to provide undergraduate minors with courses and related experiences that provide solid foundations for advanced study and careers in many fields. Students often pursue careers in business, law, nutrition, human resources, architecture, and many others, with a minor in psychology. The minor in psychology can thus be used to strengthen qualifications for any job requiring “people skills”.

#### Program Educational Objectives

1. Students will be able to select courses that fit with their major and support their career goals.
2. Students will demonstrate familiarity with the major concepts, theoretical perspectives and historical trends in psychology.
3. Students will be able to communicate effectively in a variety of formats.

#### Program Outcomes

- a. Students will define key concepts of the different domains of psychology, which constitute the basis of the bachelor’s degree.
- b. Correlate the basic notions of psychoanalysis and target the relationship between theory and analytical practice in clinical settings.
- c. Distinguish the different theoretical perspectives of social psychology, develop conceptual skills of communication and put into practice group functioning.
- d. Recognize the foundations of the psychology of child, adolescent and adult development, and highlight the relative characteristics of each stage.
- e. Put into practice the fundamental concepts of ergonomics, making a priority work-health and worktime relations, and analyzing sociologically the institutional environment.
- f. Develop psychological management of management issues, developments of labor and their consequences.

*\*Students that choose to take the master thesis are not required to complete one of the 3 elective courses.*

## Master of Arts in Social Sciences (Hybrid<sup>i</sup>)

### Mission

The mission of the Master's Program in social sciences is to form sociologists equipped with moral, human and ethical values, and rich in skills, in terms of research and teaching in the social sciences.

These skills empower students to integrate into the labor market, gain access to Doctoral studies and excel in teaching and research, especially in the field of sociology.

### Program Educational Objectives

1. Graduates in social sciences will become strategic research managers in research laboratories, administration, and public as well as in private organizations.
2. Graduates in social sciences will become a teachers, trainers and coordinators for social and economic sciences in communal and ministerial school settings.
3. Graduates in social sciences will become heads of service (position: 3rd category) in public institutions.
4. Graduates will demonstrate all the skills necessary to pursue a Doctoral course and propose an innovative field within the scope of social sciences.

### Program Outcomes

- a. Students will formulate problems relating to various fields of social sciences.
- b. Appropriate a working method which combines the epistemological, ethical, and technological principles and quantitative and qualitative techniques used within the framework of research.
- c. Pilot logistical operations of a social science research project.

<sup>i</sup> Hybrid: Courses offered in French and/or English

- d. Develop thematic axes for social science training workshops.
- e. Prepare teaching sequences of sociology and economics tailored to the curriculum of the Lebanese program.
- f. Build specialized didactic tools adapted to the teaching of social sciences.
- g. Evaluate the content and teaching methods in social sciences.
- h. Propose research topics in social sciences tailored to school settings.
- i. Categorize the different types of institutions through their social, socio-economic and socio-cultural functions.
- j. Evaluate the contribution of economic policies.
- k. Validate the fitness levels that the public institutions exert on individuals.
- l. Prepare a research project which leads to the Master's thesis or the project in social sciences.

#### Degree Requirements

## Diploma in Interventions and Systematic Therapies (Hybrid<sup>i</sup>)

### Mission

The curriculum of this diploma in IST focuses on theoretical inputs, clinical practice and personal development. The diploma offers a thorough education on approaches relating to the field of family ties.

At the end of the curriculum, clinical and health psychologists, psychiatrists and psychotherapists, can incorporate into their professional practice the contribution of systematic practice. Doctors, nurses, psychologists and specialists in the medical, social and educational sectors can integrate structures to accompany families going through difficulties.

### Program Educational Objectives

1. Graduates will develop skills relating to the indication of systematic psychotherapy; and to the modalities of interventions adapted to the contexts of groups, networks, family, couples and individuals.
2. Graduates will develop soft skills in their personal assessment and their professional context.
3. Graduates will be qualified systemic psychotherapists, professional and ethical in the performance of psychological practice and the support of couples and families.

### Program Outcomes

- a. Students will adopt a methodological approach in construction of a systemic framework.

<sup>i</sup> Hybrid: Courses offered in French and/or English

- b. Students will recognize the key concepts, methods and models of psychology in the clinical and familial systemic practice.
- c. Students will examine and define relational disorders in institutions, networks and communities by formulating intervention hypothesis.
- d. Students will put into practice the acquired learning and evaluate the training.

## **Doctoral Programs**

### **Ph.D. in Psychology (Hybrid<sup>i</sup>)**

#### **Mission**

The mission of the program seeks to promote psychology as a discipline of instruction, communication and also culture. The program offers the labor market multidimensional skills in psychology.

The program offers all the necessary skills for success and proposes an innovative research field falling within the domains of psychology.

#### **Program Educational Objectives**

To train future Higher Education researchers and professionals in psychology.

#### **Program Outcomes**

Ph.D. holders will be able to teach within the Higher Education field and to conduct and produce scientific research.

#### **Degree Requirements**

|                                    |           |

<sup>i</sup> Hybrid: Courses offered in French and/or English

**Total****60****SCIENCES****Undergraduate Programs****Bachelor of Science in Biochemistry (Hybrid<sup>i</sup> & Eng.)***Offered in Main Campus Kaslik and in RUC Zahle***Mission**

The mission of general biochemistry program is to prepare our students to infiltrate the food, biotechnological, pharmaceutical and chemical industries as specialists of the highest research qualification in the branches of molecular biochemistry, analytical biochemistry and biotechnology by providing analytical approaches and techniques for analyzing and providing solutions to the stakeholders' needs.

**Program Educational Objectives**

1. Graduates will be able to succeed in a wide variety of post-baccalaureate paths, including graduate and post-graduate schools, as well as research in biochemistry and related disciplines.
2. Graduates will be able to work in many biochemistry-related fields and continue their professional development while engaging in life-long learning necessary for a sustainable career.
3. Graduates will be able to function effectively and ethically, within an organization and society as productive members of interdisciplinary teams, with analytical and critical thinking skills to analyze and solve problems.

**Program Outcomes**

- a. Students will apply knowledge of mathematics and applied and/or natural sciences to areas relevant to the discipline.
- b. Students will design and conduct experiments, or test hypotheses, as well as to analyze and interpret data.
- c. Students will formulate or design a system, process, procedure or program to meet desired needs.
- d. Students will function on multidisciplinary teams.
- e. Students will identify and solve technical or scientific problems.
- f. Students will exhibit an understanding of professional and ethical responsibility.
- g. Students will communicate effectively.
- h. Students will possess the broad education necessary to understand the impact of technical and/or scientific solutions in a global and societal context.
- i. Students will recognize the need for and ability to engage in life-long learning.
- j. Students will appreciate the knowledge of contemporary issues.
- k. Students will use the techniques, skills, and modern scientific and technical tools necessary for professional practice.

**Degree requirements – Hybrid**

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

| <b>General Education</b>                                    | <b>30</b> |
|-------------------------------------------------------------|-----------|
| General Education - Arts and Humanities                     | 3         |
| General Education - Behavioral, Social Sciences and History | 6         |
| General Education - Civic Engagement                        | 2         |
| General Education - English and French Communication        | 6         |
| General Education - Religious Sciences                      | 3         |
| General Education – Sports                                  | 1         |
| MAT216 - General Mathematics                                | 3         |

## Bachelor of Science in Biology (Hybrid<sup>i</sup>)

### Mission

The mission of the BS in Biology is to provide its graduates an excellent foundation for careers or further studies in biotechnology, medicine, genetics, physiology and pharmacology, education.

### Program Educational Objectives

1. Graduates will be able to develop analytical and critical-thinking skills and be prepared to succeed in a wide variety of post-baccalaureate paths, including graduate and post-graduate schools, as well as research in biology and related disciplines.
2. Graduates will be able to work in many biology related fields and continue their professional development while engaging in life-long learning necessary for a sustainable career.
3. Graduates will be able to function effectively and ethically within an organization and society as productive members of interdisciplinary teams.

### Program Outcomes

Students will have:

- a. An ability to apply knowledge of mathematics, science, and applied sciences.
- b. An ability to design and conduct experiments, as well as to analyze and interpret data.
- c. An ability to formulate or design a system, process, or program to meet desired needs.
- d. An ability to function on multidisciplinary teams.
- e. An ability to identify and solve applied science problems.
- f. An understanding of professional and ethical responsibility.
- g. An ability to communicate effectively.
- h. The broad education necessary to understand the impact of solutions in a global and societal context.
- i. A recognition of the need for and an ability to engage in life-long learning.
- j. A knowledge of contemporary issues.
- k. An ability to use the techniques, skills, and modern scientific and technical tools necessary for professional practice.

### Degree requirements

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |           |
|-------------------------------------------------------------|-----------|
| <b>General Education</b>                                    | <b>30</b> |
| General Education - Arts and Humanities                     | 3         |
| General Education - Behavioral, Social Sciences and History | 6         |
| General Education - Civic Engagement                        | 2         |
| General Education - English and French Communication        | 6         |
| General Education - Religious Sciences                      | 3         |
| General Education - Sports                                  | 1         |
| MAT216 - General Mathematics                                | 3         |
| CHM212 - General Chemistry                                  | 3         |
| STA220 - Probability and Applied Statistics                 | 3         |
| <b>Common Core</b>                                          | <b>19</b> |
| BCH320 - Structural Biochemistry                            | 3         |
| BIO201 - General Biology I                                  | 3         |
| BIO271 - Laboratory of General Biology I                    | 1         |

<sup>i</sup> Hybrid: Courses offered in French and/or English

|                                                                |           |
|----------------------------------------------------------------|-----------|
| BIO202 - General Biology II                                    | 3         |
| CHM270 - Laboratory of General Chemistry                       | 1         |
| CHM317 - Organic chemistry                                     | 3         |
| CHM371 - Laboratory of Organic Chemistry                       | 1         |
| PHY211 - Fundamental of Physics for Life Sciences I            | 3         |
| PHY270 - Laboratory of General physics                         | 1         |
| <b>Specialization</b>                                          | <b>40</b> |
| BCH445 - Fundamentals of cell signaling                        | 3         |
| BCH521 - Metabolic Biochemistry                                | 3         |
| BIO272 - Laboratory of General Biology II                      | 1         |
| BIO228 - General Botany                                        | 3         |
| BIO322 - Genetics                                              | 3         |
| BIO336 - General Immunology                                    | 3         |
| BIO411 - General Microbiology                                  | 3         |
| BIO413 - Molecular Biology                                     | 3         |
| BIO415 - Systems Physiology                                    | 3         |
| BIO471 - Laboratory of Microbiology                            | 1         |
| BIO472 - Laboratory of Molecular Biology                       | 1         |
| BIO473 - Lab of Biology and Physiology of Plants               | 1         |
| BIO417 - Fundamentals of Pharmacology and Toxicology           | 3         |
| BIO321 - Human Anatomy and Physiology                          | 3         |
| BIO430 - Applied Cell Biology                                  | 3         |
| BIO490 - Internship                                            | 3         |
| <b>Electives</b>                                               | <b>7</b>  |
| BCH470 - Laboratory of Biochemistry                            | 3         |
| CHM321 - Inorganic Chemistry                                   | 3         |
| CHM411 - Organic Chemistry II                                  | 3         |
| CHM426 - Food Chemistry                                        | 3         |

## Bachelor of Science in Chemistry (Hybrid<sup>i</sup>)

### Mission

The mission of the BS in Chemistry is to provide students interested in pursuing careers in medicine, chemical research, industry, environment and education with a strong foundation of theory, practical lab skills, and research experiences. It helps them become self-learners and promotes an understanding that social consciousness and ethical behavior are essential features of a principled chemistry community.

### Program Educational Objectives

1. Graduates will be ready for employment as: chemists, environmental consultant, Technical and sales support of products ranging from laboratory instrumentation to pharmaceuticals, or for graduate study in chemistry, or for acceptance to medical school.
2. Graduates will be able to develop an understanding of chemical principles; skill in analytical methods, including modern instrumentation; the ability to observe, record, critically interpret, and communicate

<sup>i</sup> Hybrid: Courses offered in French and/or English

experimental results; a facility in analytical and logical problem solving; and skills in quality control investigation.

3. Graduates will be able to participate effectively in multidisciplinary teams in both leadership and fellowship roles and worked with and welcomed diversity.

#### Program Outcomes

- Students will apply knowledge of mathematics and applied and/or natural sciences to areas relevant to the discipline.
- Students will design and conduct experiments, or test hypotheses, as well as to analyze and interpret data.
- Students will identify and solve technical or scientific problems.
- Students will exhibit an understanding of professional and ethical responsibility.
- Students will communicate effectively.
- Students will possess the broad education necessary to understand the impact of technical and/or scientific solutions in a global and societal context.
- Students will recognize the need for and ability to engage in life-long learning.
- Students will appreciate the knowledge of contemporary issues.
- Students will use the techniques, skills, and modern scientific and technical tools necessary for professional practice.

## Bachelor of Science in Human Nutrition and Dietetics (Hybrid<sup>i</sup> & Eng.)

Offered in Main Campus Kaslik and RUC Zahle

### Program Mission

The mission of the program is to improve the health and wellbeing of individuals and diverse communities locally and globally through leadership and excellence in nutrition and dietetics education, research, practice and service. In addition, the program is dedicated to preparing graduates to become global citizens, ethical leaders and decision makers.

### Program Educational Objectives

1. Prepare graduates to be competent entry level dietitians.
2. Grow their ability to translate research into practice through effective programs and valuable information dissemination.
3. Strongly engage in current nutrition and health issues affecting the national and global communities.

### Program Outcomes

- a. Students will learn how to maintain up-to-date knowledge and synthesize approaches related to contemporary and emerging nutrition issues.
- b. Develop personal characteristics such as leadership and an ability to work in multidisciplinary teams.
- c. Act ethically with accountability for life-long learning and commitment to excellence.
- d. Apply the knowledge of food and nutrition in the disease management process.
- e. Apply the knowledge of basic sciences and statistics.
- f. Develop effective counseling techniques needed in clinical dietetic practice and assessing their outcomes.
- g. Interpret and apply nutrition concepts to evaluate and improve the health of communities.
- h. Conduct research using appropriate measures and methods.
- i. Communicate effectively.

### Degree Requirements - Hybrid Section

This program requires 96 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |           |
|-------------------------------------------------------------|-----------|
| <b>General Education</b>                                    | <b>30</b> |
| General Education - Arts and Humanities                     | 3         |
| General Education - Behavioral, Social Sciences and History | 6         |
| General Education - Civic Engagement                        | 2         |
| General Education - English and French Communication        | 6         |

<sup>i</sup> Hybrid: Courses offered in French and/or English

|                                                            |                   |
|------------------------------------------------------------|-------------------|
| General Education - Sports                                 | 1                 |
| General Education - Religious Sciences                     | 3                 |
| BIO211 - Cell Biology                                      | 3                 |
| NTR211 - Fundamentals of Human Nutrition                   | 3                 |
| STA220 - Probability and Applied Statistics                | 3                 |
| <b>Common Core</b>                                         | <b>9</b>          |
| BCH215 - Introduction to Biochemistry                      | 3                 |
| CHM210 - Fundamentals of Chemistry                         | 3                 |
| GAA227 - Food Microbiology                                 | 2                 |
| GAA277 - Food Microbiological Laboratory                   | 1                 |
| <b>Specialization</b>                                      | <b>51</b>         |
| GAA340 - Food Composition and Analysis                     | 3                 |
| GAA339 - Hygiene and Quality Control of Food               | 3                 |
| GAA378 - Food Composition and Analysis Laboratory          | 1                 |
| NTR222 - Nutrition and Physiology I                        | 3                 |
| NTR223 - Nutrition and Physiology II                       | 2                 |

## Bachelor of Science in Nutrition and Dietetics - Coordinated Program (Eng.)

### Program Mission

The mission of the program is to educate students through didactic, comprehensive and interactive learning environment, critical-thinking, and supervised practices. By means of effective and engaging educational materials, this program is set to prepare graduates becoming successful contributors in the profession of dietetics through counseling, education or research, and to address the ever-changing needs of the communities.

### Program Educational Objectives

1. Prepare graduates for practice as a dietitian.
2. Adhere to the Code of Ethics and the Scope of Nutrition and Dietetics Practice.
3. Integrate research principles into evidence-based practice, abide critical thinking, and demonstrate communication and leadership competencies.

### Program Outcomes

- a. Demonstrate effective and workmanlike verbal and written communication along with ethical conducts and values for the practice of dietetics.
- b. Integrate peer-reviewed scientific data and translate research data into practice.
- c. Implement the Nutritional Care Process to deliver clinical services and dietetic information to communities and individuals.
- d. Apply management theories using proficient and efficient communication to deliver services to individuals and communities.

### Degree Requirements

This program requires 122 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |                    |

## Academic Minors

### Minor in Applied Chemistry (Hybrid<sup>i</sup>)

#### Mission

The minor program in applied chemistry enables students to understand the impact of chemistry in a number of different sectors and industries, involving biotechnology, human health, food and environmental sciences, and more.

#### Program Educational Objectives

1. Students will enhance their skills in the different applied fields of chemistry.
2. Students will assume leadership roles in industry and/or in technological fields.

<sup>i</sup> Hybrid: Courses offered in French and/or English

3. Students will develop career skills through life-long learning.

#### Program Outcomes

- An ability to apply knowledge of chemical sciences in solving problems.
- An ability to communicate effectively and ethically
- A knowledge of contemporary issues in the chemistry context
- An ability to design and conduct experiments or processes, to meet desired needs.

#### Minor Requirements

|                                                                                                                        |           |
|------------------------------------------------------------------------------------------------------------------------|-----------|
| CHE212 - General Chemistry                                                                                             | 3         |
| CHE422 - Industrial Processes                                                                                          | 3         |
| CHE425 - Techniques of Analysis                                                                                        | 3         |
| CHE426 - Food chemistry                                                                                                | 3         |
| Green chemistry or an equivalent course                                                                                | 3         |
| CHE411 - Organic Chemistry II<br>or CHE320 - Inorganic Chemistry<br>or CHE420 - Macromolecules, Polymers and Materials | 3         |
| <b>Total</b>                                                                                                           | <b>18</b> |

### Minor in Biochemistry (Hybrid<sup>i</sup>)

#### Mission

The mission of the minor in Biochemistry program is to offer a consistent general program by providing students with a supportive environment to learn the general basic principles in biochemistry and the different laboratory skills and instrumental techniques.

#### Program Educational Objectives

- Students will be prepared for pursuing further education in health-professional fields, food technology, technical and industrial biochemistry fields, environmental science and scientific communication fields.
- Students will develop the ability to think critically, analyze, synthesize, and to use information to solve problems.
- Students will be offered a wider scope of job opportunities.

#### Program Outcomes

- Students will successfully show acquisition of basic concepts in biochemistry.
- Students will demonstrate basic experience in laboratory and instrumental modern techniques.
- Students will attain suitable preparation for any career related to biochemistry or entrance into professional studies such as health, food technology, and technically advanced fields.
- Students will develop the ability to communicate scientific ideas, orally and in writing.

#### Minor Requirements

| <b>Total</b>                             | <b>18</b> |

## Minor in Chemistry (Hybrid<sup>i</sup>)

### Mission

The minor program in chemistry provides courses for non-chemistry majors who need a basic understanding of the principles of chemistry either for their chosen major or their general education. It engages students in developing a greater understanding of the chemical nature of the world.

### Program Educational Objectives

1. Students will enhance their skills in the field of chemistry.
2. Students will demonstrate professional and ethical responsibilities towards their profession, society and the environment as well as respect for diversity.
3. Students will be able to work in a society as productive members of interdisciplinary teams and maintain sustained intellectual curiosity characteristic of a lifelong learner.

### Program Outcomes

- a. An ability to apply knowledge of science and function on multidisciplinary teams.
- b. An ability to design and conduct experiments, as well as to analyze and interpret data.
- c. The broad education necessary to understand the impact of chemistry in a global, economic, environmental, and societal context.
- d. An understanding of professional and ethical responsibility.

### Minor Requirements

|                                                                                                                                                              |           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| CHE212 - General Chemistry                                                                                                                                   | 3         |
| CHE317 - Organic Chemistry I                                                                                                                                 | 3         |
| CHE222 - Chemistry of Solutions                                                                                                                              | 3         |
| CHE325 - Physical Chemistry I                                                                                                                                | 3         |

## Minor in Natural Sciences (Hybrid<sup>ii</sup>)

### Mission

The mission of the natural sciences minor is to prepare students for med school by providing them with the sufficient requirements to present the MCAT exam, as well as to prepare students interested in developing a better understanding of the basic sciences by providing them knowledge in many natural sciences fields (biology, chemistry, physics, and mathematics).

### Program Educational Objectives

1. Students will be prepared for entry-level employment in a wide variety of fields, or for graduate study in health professions or other natural sciences-related disciplines.
2. Students will be able to place scientific knowledge into an ethical context, especially how natural sciences can contribute to the resolution of ethical, social, and environmental issues.

<sup>i</sup> Hybrid: Courses offered in French and/or English

<sup>ii</sup> Hybrid: Courses offered in French and/or English

- Students will develop the ability to think critically, analyze, synthesize, and use information to solve problems.

#### Program Outcomes

- Students will understand and apply scientific principles, including forming hypotheses, designing experiments to test hypotheses, and collecting, analyzing, interpreting, and reporting data.
- Students will develop the ability to use appropriate laboratory or field procedures, methods, and instrumentation for biological or chemical studies.
- Students will develop breadth of knowledge in the natural sciences, including the fields of chemistry, physics, evolution, molecular biology, genetics, and physiology.
- Students will develop the ability to communicate scientific ideas, orally and in writing.

#### Minor Requirements

### Minor in Sports Nutrition (Hybrid<sup>i</sup>)

#### Mission

The mission of this program is to prepare graduates in becoming physical fitness experts. Graduates will be able to contribute to the improvement of health and wellbeing of individuals and groups of people through professional physical activities.

The program offers the opportunity for graduates to work in corporate wellness and/or fitness centers, university or commercial athletic teams.

#### Program Educational Objectives

- Prepare graduates to be competent entry-level sport nutrition experts.
- Understand the importance of nutrition before, during or after any sport activity.
- Evaluate the nutrition for active individuals and athletes in different fitness settings.

#### Program Outcomes

- Maintain up-to-date knowledge and synthesize approaches related to sports nutrition.
- Develop personal characteristics such as leadership and the ability to work in corporate wellness or fitness centers.
- Apply the knowledge of food and nutrition before, during or after any sport activity.

#### Minor Requirements

## Graduate Programs

### Master of Science in Biochemistry (Hybrid<sup>i</sup>)

#### Emphasis

- Applied Biochemistry and Biochemical Investigations
- Pharmacology and Cosmetology

#### Mission

The mission of the graduate biochemistry program is to train new scientists to probe the mechanistic basis of fundamental biochemistry processes within the context of an ever-changing knowledge base. This program gives learners a sound and broad background in biochemistry by providing training in the theoretical and practical aspects of biochemistry and its applications to familiarize themselves with biochemical methodology and to sample some of its most exciting applications in biotechnological, pharmaceutical, clinical, cosmetic, food and forensic science industries. In pursuit of this mission, the biochemistry graduate program strives to prepare students for careers ranging from teaching at postsecondary institutions to conducting research in universities (PhD program), health settings, and government or private laboratories.

#### Program Educational Objectives

1. Graduates will be able to acquire increased professional experience over the course of their graduate program, so that they can be prepared for a successful industrial career through their coursework and the development of a research project.
2. Graduates will be able to apply knowledge of biochemical technology and applied biochemistry to formulate problem statements, design experiments, test hypotheses, and solve problems in biochemical and biological areas.
3. Graduates will be able to recognize research design methodology and are able to use problem solving techniques associated with interdisciplinary research. They will have the ability to engage in a Doctoral Program (PhD program) with scholars in a variety of interdisciplinary topics related to the field.

#### Program Outcomes

- a. Students will demonstrate broad knowledge of the focus area.
- b. Students will design and conduct experiments, and to analyze and interpret experimental results.
- c. Students will apply knowledge of statistical analysis, applied sciences, biotechnology fundamentals, and to use the techniques, skills and modern applied biochemistry tools.
- d. Students will work as a member of multidisciplinary teams, and have an understanding of team leadership.
- e. Students will communicate scientific results in writing, oral presentation and publication in peer reviewed scientific journals.
- f. Students will recognize how the expertise will be applicable in the execution of interdisciplinary research and how the research training allows joining the doctoral program or employment.
- g. Students will recognize the need for and ability to engage in life-long learning.
- h. Students will appreciate the knowledge of contemporary issues.
- i. Students will identify, formulate, and solve biotechnological problems.
- j. Students will exhibit an understanding of professional and ethical responsibility.

#### Degree requirements

|                                         |          |
|-----------------------------------------|----------|
| <b>Common Core</b>                      | <b>9</b> |
| CHM511 - Techniques for Quality Control | 3        |
| ENG510 - Advanced Academic English      | 2        |
| FSC600 - Research Methodology           | 1        |

<sup>i</sup> Hybrid: Courses offered in French and/or English

|                                                                      |           |

## Master of Science in Biology (Hybrid<sup>i</sup>)

### Emphasis

- Molecular and Cellular Genetics
- Physiology and Physiopathology

### Mission

The mission of the MS in Biology is to prepare broadly trained, professional scientists by developing the students' independent research skills, strengthening their scientific communication abilities, and enhancing their likelihood of gaining employment in molecular biology, physiology and other biological fields or successful admission into doctoral and professional programs.

### Program Educational Objectives

1. Graduates will be able to succeed in a wide variety of post-baccalaureate paths, including graduate and post-graduate schools, as well as research in biology and related disciplines.
2. Graduates will be able to work in many biology-related fields and continue their professional development while engaging in life-long learning necessary for a sustainable career.
3. Graduates will be able to function effectively and ethically within an organization and society as productive members of interdisciplinary teams.

### Program Outcomes

<sup>i</sup> Hybrid: Courses offered in French and/or English

- Students will integrate advanced concepts in genetics, molecular biology, physiology, physiopathology and related fields
- Students will develop analytical and critical-thinking skills, and evaluate, design, conduct and quantitatively assess innovative research in a biological discipline.
- Students will assess ethical issues in laboratory and/or field settings
- Students will effectively communicate scientific ideas by defending original research in writing and in oral presentation.

## Master of Science in Chemistry (Hybrid<sup>i</sup>)

### Emphasis

- Industrial Processes and Methods Validation
- Environmental Risks and Waste Treatment

### Mission

The graduate chemistry program values teaching and research as equal and essential components of the education of our students and seeks to integrate research with teaching at every possible opportunity in the curriculum. In pursuit of this mission, the graduate chemistry program aims to prepare students for careers ranging from teaching at postsecondary institutions to conducting research in universities (PhD program), industrial settings, and government laboratories.

### Program Educational Objectives

- Graduates will be able to design systems, components, or processes to meet specified objectives for industrial or laboratory chemical issues within realistic constraints such as economic, environmental, health and safety, manufacturability, and sustainability.

<sup>i</sup> Hybrid: Courses offered in French and/or English

3. Graduates will be able to recognize research design methodology and use problem-solving techniques associated with interdisciplinary research. They will have the ability to engage in a Doctoral Program (PhD program) with scholars in a variety of interdisciplinary chemical fields.
4. Graduates will be able to present chemical information coherently through oral and written discourse and to generate technical documents describing their results for editing and publication in peer reviewed scientific journals.

#### Program Outcomes

- a. Students will design a system or process within realistic constraints such as economic, environmental, health and safety, manufacturability, and sustainability.
- b. Students will employ critical thinking and efficient problem-solving skills in the industrial production process, in separation units and recycling processes.
- c. Students will function in multidisciplinary teams and recognize how their expertise will be applicable in the execution of interdisciplinary industrial problems.
- d. Students will apply the research methodology and statistical analysis to the interpretation and evaluation of critical scientific data.
- e. Students will communicate scientific results in writing and in oral presentation.
- f. Students will generate technical documents describing their results for editing and publication in peer reviewed scientific journals.
- g. Students will identify the future career path and understand how the research training allows them to join the doctoral program or enter employment.
- h. Students will recognize the need for and an ability to engage in lifelong learning

## Master of Science in Environmental Technologies (Hybrid<sup>i</sup>)

### Mission

This professional master offers to prepare competent executives in the environmental field and particularly in air quality and analysis. It aims to give candidates a solid and wide scientific knowledge allowing them to evaluate the impacts on the environment generated by human activities and to implement the tools, techniques and devices to control them.

### Program Educational Objectives

1. Graduates will be trained to be capable of coping with the major environmental, climatic and socio-economic changes to come, using both state-of-the-art training Research and a dense and efficient network of professionals.
2. Graduates will be familiar with research design methodology and be able to use problem-solving techniques associated with interdisciplinary research.
3. Graduates will have the ability to present chemical information coherently through oral and written discourse and to generate technical documents describing their results for editing and publication in peer reviewed scientific journals.

### Program Outcomes

- a. Students are able to use the legal prerequisites to ensure a good environmental management.
- b. The students are able to solve an environmental problem by applying a multidisciplinary approach.
- c. Students acquire the necessary foundations and essential in analysis, and geographic information processing so they can integrate it in the professional environment field.
- d. Apply the research methodology and statistical analysis to the interpretation and evaluation of critical scientific data.
- e. Communicate scientific results in writing and in oral presentation.
- f. Generate technical documents describing their results for editing and publication in peer reviewed scientific journals.
- g. Be able to limit the environmental impacts of effluents.
- h. Recognize the need for and an ability to engage in lifelong learning.
- i. Have an ability to apply knowledge of mathematics and applied and/or natural sciences to areas relevant to the discipline.

### Degree requirements

## Master of Science in Neuroscience and Biotechnology (Hybrid<sup>i</sup>)

### Mission

Students are provided with an international curriculum with identical core courses and specialization tracks based on each person's expertise in fundamental or biomedical sciences. We offer a unique wide range of complementary competences and methods that cover all fields of modern neuroscience, from molecular aspects to in vivo analysis. Students also benefit from our dense network of expert research labs and easy access to high-level specialized core facilities, R&D projects in academic and industrial fields, and Bilingual teaching and close collaboration between universities to offer mobility opportunities.

### Program Educational Objectives

1. Graduates will have extended knowledge, skills, and experience in neuroscience and biotechnology and developed abilities of leadership, collaboration, and communication.
2. Graduates will be able to conduct original research in a neuroscience, including the design of experiments with appropriate controls.
3. Graduates will be able to apply professional ethics in the conduct of science.
4. Graduates will be able to use their knowledge and abilities to answer questions and solve problems in the complex and interactive context of local, regional, and global issues and concerns.

### Program Outcomes

- a. Students will acquire high-level innovative and interdisciplinary training in Neuroscience.
- b. Manipulate theoretical concepts together with a broad range of experimental methods used in biotechnology and biomedicine.
- c. Master competences required to implement and use modern techniques, and to serve complex experimental set-up.
- d. Conceive and conducting individual projects in Neuroscience and Biotechnology.
- e. Elaborate and communicating scientific data and concepts.
- f. Develop connections and networking in neuroscience across the Mediterranean region.

## Master of Science in Nutrition (Hybrid<sup>i</sup>)

### Mission

The mission of the Department of Nutrition and Food Sciences at USEK is to improve the health and wellbeing of individuals and diverse communities locally and globally through leadership and excellence in nutrition and dietetics education, research, practice and service.

### Program Educational Objectives

1. Understand the broad area of nutrition sciences as well as the areas of nutritional biochemistry, nutritional assessment, and research techniques.
2. Grow their ability to analyze and apply current research into practice and use these nutrition principles in the treatment and prevention of diseases.
3. Develop effective oral and written communication skills for the education of other nutrition professionals and others in the general public.

### Program Outcomes

- a. Apply research based evidence into dietetics practice.
- b. Provide optimal nutrition counseling for different types of clients and introduce behavioral change in clinical settings
- c. Evaluate and communicate current and future trends in the areas of dietetics for disease prevention, health promotion and management practices.
- d. Develop personal characteristics and perform in interdisciplinary teams

## Doctoral Programs

### Ph.D. in Agricultural and Food Sciences (hybrid<sup>i</sup>)

#### Presentation

The Ph.D. in Agricultural and Food Sciences is the first doctoral degree in the discipline in Lebanon. The vocation of both scientific and technological research of the most of the laboratories in the school require to go beyond the specialization towards an integral approach, in both ways between the science and the technology, and the confrontation to the advancement of each of the disciplines.

### Ph.D. in Chemistry & Life and Earth Sciences (hybrid)

#### Presentation

Candidates could specialize in either Chemistry or Life and Earth Sciences.

| <b>AAR305</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Museology and Archeology</b>                                                      | <b>2 cr.</b> |
| The course introduces students to the methods of museology, including conservation, restoration, and publishing. They are trained to substantiate the heritage of the Near East by using traditional tools and new technologies during excavations. They will conduct field work at the national museum of Beirut, and compare theories of different methods of conservation used and deployed by international museums, such as Le Louvre in Paris, or the Pergamon museum in Berlin.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                      |              |
| <b>AAR320</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Introduction to Pre-History</b>                                                   | <b>2 cr.</b> |
| In this course students will study the period before history, known as pre-history, and consider all the events which marked human beings before the invention of writing. This course is a multidisciplinary science, which includes geology, anthropology, climatology, zoology, etc. Students will examine material, mute traces and lifeless remnants of the past, which will provoke questions and enable students to draw information from multiple arenas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                      |              |
| <b>AAR335</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Former Semitic Languages: Semitic Group (Phoenician, Hebrew, Aramaic, Syriac)</b> | <b>3 cr.</b> |
| Students of history and archeology will study the Semitic languages, grammar books, dictionaries, and the corpus of texts. In this course students will learn how to read inscriptions and texts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                      |              |

| The purpose of this course is to make students aware of the values of Lebanon's archeological heritage. Important historical sites of Lebanon will be studied. The cultural, architectural and artistic characteristics of every period will be underlined. The main discoveries preserved in Beirut National Museum and in the regional museums of Baalbek, Beiteddine and Byblos, as well as the major works preserved in the international museums, will be included. This highly visual course will be illustrated with projected images.                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                      |              |

| The course covers the period from the 14th century up to the first half of the 18th century. It studies the transformations in art throughout the centuries within the sociocultural context, from early antiquity in the West, until when paintings and sculptures began to illustrate real characters in real places. Students will learn how to analyze a work of art (painting, sculpture, drawings, etc.) and how to compare the techniques used by the artists in different periods of time.                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                      |              |

| Contemporary art begins in the last half of the 20th century, and this course explains the causes of transformations in art, and the trends, forms and tools which resulted in the contemporary arts. Students learn how to give value to a contemporary work of art in a time when there are not fixed standards anymore and where everything seems allowed. We consider the role of a work of art in society and its impact on the observer, as well as explore real and virtual museums.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                      |              |

| The course studies current events in the Anglophone world. The introduction defines the concept of current event, and identifies the Anglophone countries and their common character underlying their various ways of life. Part One examines the special current events relative to each Anglophone country, namely, the United Kingdom and The British Isles, The Republic of Ireland, Australia, New Zealand, Canada, South Africa, India, Nigeria, The Caribbean, and The United States of America. Part Two reflects on the wider world current events that may affect the Anglophone world, such as governance, terrorism, globalization, human rights, democratization, and settlement of international disputes, migration and environmental and economic issues. Finally, the current events of yesterday and of today, no less than those of tomorrow. The course will also explore "the next society" that we want to be members of. |                                                                                      |              |

| This course aims to develop the students' language skills by giving a detailed analysis of Arabic syntax based on a dynamic approach using practical texts and exercises. This course also broadens the students' knowledge of oral and written Arabic through exploration and analysis, by consolidating their Arabic grammar skills and introducing them to the linguistic studies or references needed for writing.                                                                                                                                                                                                                                                                                                                  |                                               |              |
| <b>ARA310</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Techniques of Expression in Arabic</b>     | <b>3 cr.</b> |
| This course is designed to improve the Arabic language performance of the students, and to help them learn, through the different patterns of expression (poetry, literary writings, articles, reports, etc.) how to analyze, connect, distinguish and deduce in order to better understand or write texts. This course also aims to raise the awareness of future translators of the formal and stylistic particularities of each type of discourse.                                                                                                                                                                                                                                                                                   |                                               |              |
| <b>ARCV605</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Research Tools and the Internet</b>        | <b>3</b>     |
| An introduction to the electronic environments related to the archives collections. It aims at acquiring the concepts which allow the adaptation of the major research principles, use and display of archival descriptions to the electronic environment (intranet, internet). This introductory course tackles the documentary and technical problems linked to the establishment of a digitization project in an archive center, and helps acquire the concepts that would allow for the publishing of digitized archives documents on the Internet.                                                                                                                                                                                 |                                               |              |
| <b>ARCV610</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Records Management</b>                     | <b>3</b>     |
| This course introduces the basic notions, concepts and main problems related to electronic archiving, helps discover the technical and normative environment; and situate the archivist intervention in the digital information circuit. It also aims at presenting the records management reference systems.                                                                                                                                                                                                                                                                                                                                                                                                                           |                                               |              |
| <b>ARCV615</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Digital Archives</b>                       | <b>3</b>     |
| This course introduces the existing possibilities and technologies for the digitization of analog documents, so as to enable the elaboration of concrete projects. It allows the identification of the main problems related to the archiving of digital documents, the available strategies, and the ability to plan their implementation.                                                                                                                                                                                                                                                                                                                                                                                             |                                               |              |

| An overview of the architecture of information systems and databases as well as the fundamental principles of information technology, their development status and their perspectives. This course introduces the methods used in the development of information systems, and allows the student to evaluate and judge the importance of the foundations of information technologies for institutions. It also enables students to have a good command of a relational DBMS (DataBase Management System), especially the SQL standard; and to understand all the aspects relating to the architecture and functioning of a relational DBMS, namely, physical storage, indexing, and optimization of requests, competition and failover. |                                               |              |

| This course is an introduction to the process of icon-writing, from its preparatory techniques to its realization according to the Byzantine tradition, using the liquid egg tempera ancient technique. The student will explore and apply the preparation of the plank, how to transfer the drawing and apply the color, and will learn jointly the symbolic meaning of the iconic forms, the materials, and the steps of the icon-writing process.                                                                                                                                                                                                                                                                                    |                                               |              |

| Through material, color and light, as space generators, this course will take part in the susceptible and abstract notions of spatial creation and the ambiances of everyday interior spaces. The experimental discipline will allow to implement and harmonize the constituent elements of any architectural space, object of design, furniture or surface by the chromatic phenomenon: color, clarity, saturation, contrast.                                                                                                                                                                                                                                                                                                          |                                               |              |

| The objective of this course is to give the student the opportunity to undertake a personal work of exploration and experimentation. The student will explore colors, experience artistic expression and freedom within a creative support system, using tempera, acrylic, gilding and other artistic techniques. The student will learn to create paintings informed by painting ideas and processes through the different movements in the art's history, especially those innovated since the beginning of the 20th century.                                                                                                                                                                                                         |                                               |              |

| This course is an exploration of the history of the Christian iconography, allowing the student to look over the foundations of sacred Christian art, its purpose and its historical chronology, by understanding the genesis of the Christian icon and its different transformations and evolution. It includes a brief introduction to the Christian aesthetics and iconography, and in-depth studies of the chronology of the Christian Iconography, and learning the different iconographical schools and movements, especially the Byzantine and Syro-Maronite iconography, in addition to the an overview of the iconography of the Oriental churches. |                                                          |              |

| This course is a study of the various historical cities in the region of Antioch, and their artistic and religious heritage. It will allow the student to understand and evaluate the importance of the historical, architectural, archaeological and artistic heritage of the different key cities in the region of Antioch. This course also involve the student in conducting a research and a detailed objective work in the field, aiming to highlight one or several local or regional sites concerned by this study.                                                                                                                                  |                                                          |              |

| This course offers a study on the icon throughout the centuries, up to our times, consisting of periods of crisis that eventually led to the rise of the icons, the periods of iconoclasm (8th-9th c.), hesychastic controversy (14th c.) and Moscow councils (16th c.). The Christian icon is restored in its proper context in light of the dogmatic and church teachings, while also receiving a descriptive analysis of the different symbols that it represents. Thus the students will succeed in understanding the real meaning of the icon in its historical, esthetic and cultural context, while being able to distinguish a holy icon from a religious emotional picture.                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                |              |
| <b>ARS509</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Thematic Seminar II (Methodology)</b>                                       | <b>3 cr.</b> |
| In this seminar, we examine the methods of historical and theoretical research, the rules governing the writings of the essay, and problems to be solved during the conception of an artwork or an artistic project. Also studied are issues to be addressed in artistic research and some solutions suggested by important works. The students are invited to participate in terms of discussion and theoretical and practical presentations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                |              |

| A study of Christian architecture through a comparison whereby students can realistically approach the current issues. In the field of heritage, the comparative concerns geographical areas on a worldwide scale, as well as all the periods from antiquity to the present day.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                |              |

| This course provides the theoretical knowledge and plastic analysis tools necessary for understanding an artwork classified as "Minor Arts", which refers to all forms of figurative art that is neither painting nor sculpture, or architecture. Minor Arts may also be designated as "Decorative Arts".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                |              |

| The course begins with a general study of many types of churches from an historical, liturgical, architectural and esthetical perspective. Then students will choose a type of church from which they will make an individual study.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                |              |

| This course presents a historical and symbolical study of the Pagan, Jewish and Islamic iconography.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                |              |
| <b>ARS680A</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Dissertation</b>                                                            | <b>6 cr.</b> |
| For their dissertations, students can choose freely a subject which will be developed under the supervision of their project manager. At the end of the semester, the dissertation will be discussed in a public thesis defense.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                |              |
| <b>AV5500</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Methodology</b>                                                             | <b>3 cr.</b> |
| This course aims to enable students to present visual and performing arts criticism in correct scholarly form, to introduce them to different methods of carrying out research and to acquaint them with the methodology used in classifying bibliographies and reference works relevant to the subject area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                |              |
| <b>AV5680A</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Directed Individual Studies I</b>                                           | <b>6 cr.</b> |
| Students will use this course to complete an independent or team project. This project will help round out a student's portfolio and will demonstrate an appropriate level of professional challenge. These projects may be a narrative film, documentary, animation, website, or mobile application, or they may be a thesis relevant to the field of specialization. Students will form a contract with the faculty concerning the content of their project. Completed projects will assist students in the professional or in the academic field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                |              |

| This course is based on an understanding of the different biochemical processes taking place in the human body. It enables students to acquire a basic foundation in biochemistry so they are able to competently address all areas related to medical biochemistry. Structural biochemistry defines the structure of the various molecules of living matter such as carbohydrates, lipids, amino acids, proteins, enzymes, nucleotides and vitamins.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                |              |

| Enzyme technology is one of the key disciplines that a student in Biology, Biochemistry or even Chemistry should master. This course presents the basic concepts of Enzymology. Student also will discover the technological techniques of enzymes in several fields such as scientific research, industry, food, medicine and the environment. Many illustrations have been inserted to clarify or supplement the topics covered. Some exercises and solutions will enable students to improve or to assess their level of knowledge.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                |              |

| This course deals with acquiring the laboratory skills required for success in experimental biochemistry and molecular biology. It is particularly suited for students intending a career as a technician or research scientist in the areas of biochemistry, biotechnology, bioengineering, microbiology, or molecular biology. The course content focuses on the detection, purification and identification of biological macromolecules such as proteins and nucleic acids. The material is divided into two equal parts. The first part includes the theory and practice of biological spectroscopy with emphasis on visible, infrared, circular dichroism, optical rotary dispersion, resonance Raman, nuclear magnetic resonance and electron paramagnetic resonance spectroscopy of proteins and nucleic acids. The second part includes the theory and practice of analytical biochemistry with emphasis on diffusion, gel permeation chromatography, ion-exchange chromatography, affinity chromatography, X-ray crystallography, sedimentation velocity ultracentrifugation, sedimentation equilibrium |                                                                                |              |

ultracentrifugation, density gradient ultracentrifugation, agarose gel electrophoresis, SDS gel electrophoresis and isoelectric focusing of proteins and nucleic acids.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                |              |

| Understanding all vital processes requires knowledge of the biochemical reactions and their integration in metabolic pathways. This course covers two basic areas of molecular biochemistry which are the production and storage of energy, and the biosynthesis of macromolecules. The course starts with the metabolism of carbohydrates, the main producer of energy in the cell. Several topics are devoted to the study of glycogen metabolism, glycolysis, the Krebs cycle and the pentose phosphate pathway, then lipid metabolism ( $\beta$ oxidation, fatty acid synthesis, cholesterol synthesis), and on protein metabolism (transamination, urea cycle), and then nucleotide metabolism.                                                                                                                                                                              |                                                |              |
| <b>BCH430</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Pharmaceutical Biochemistry</b>             | <b>3 cr.</b> |

| This course will provide an in-depth look at how novel, pharmacologically active molecules are designed to treat human diseases. Topics will include: Drug discovery; Molecular design; Organic synthesis of drug molecules; Structure-Activity Relationships; Drug interactions with receptors; Pharmacokinetics; Case Histories; Patents; Ethics, and additional examples and applications will be drawn from the published literature. Selected case histories throughout the course will serve to illustrate the concepts.                                                                                                                                                                                                                                                                                                                                                    |                                                |              |

| This course introduces both the principles and the applications of recombinant DNA technology to animals, plants, and microorganisms. The course describes the use of genetically engineered products to clean the environment and improve human health.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                |              |

| The course is divided into two parts. In the first part, we discuss the structure and dynamics of membranes, the students will receive specialized information concerning lipid and protein composition of the cell membrane, membrane fluidity and cellular traffic. Then, the domain of the translocation of proteins across the membrane will be detailed explaining to the student the destination of a non-cytoplasmic protein (ER, Golgi apparatus, mitochondria, nucleus, and peroxisomes). In the second part, the students will receive a concept on the cell signaling and signal transduction. The different types of membrane receptors and channels of cellular signaling will be described. The various effectors; the coupling mechanisms between receptor and effector, as well as the second messengers produced by these effectors will be detailed.            |                                                |              |

| Students learn how to prepare a buffer solution and how to determine its capacity and its pKa. They also learn to distinguish major biochemical molecules (carbohydrates, lipids, proteins) by using specific qualitative tests for this purpose. Glucose in plasma, lipids, triglycerides, proteins in serum, and level of creatinine in urine are evaluated by using spectro-photo-colorimetric techniques.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                |              |

| In part to provide a more authentic experience of actual lab work, experiments are done in groups of two. Each experimental session is started with an explanation, given by the instructor, of the aim, the interest and the steps of the experiment. Prior to each lab period, students need to spend some time reading the Laboratory Manual. This reading provides background information of the procedures to be performed and a facility to answer the prelab questions covered in each session. Students are required to maintain a laboratory notebook used for the recording of laboratory data and calculations, and critically important for writing lab reports. Students are encouraged to participate as much as possible in discussions during the lab work.                                                                                                       |                                                |              |
| <b>BCH490</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Internship</b>                              | <b>3 cr.</b> |
| An <i>internship</i> is an opportunity offered by an employer to biochemistry students to work at a firm for a fixed, limited period of time. The internship will increase student's skills and knowledge, improve the understanding of a particular job or industry, and help to gain an insight into the way organizations operate and the challenges they face.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                |              |
| <b>BCH513 - BCM513</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Ecotoxicology</b>                           | <b>3 cr.</b> |
| Ecotoxicology is a relatively new science, whose main objective is to analyze the mechanism responsible for the dysfunction of ecological systems. This course covers the fundamentals of ecotoxicology (toxicokinetic and toxicodynamic regulation) to introduce the students to a risk assessment approach. The different ecotoxicological fundamental principles are illustrated by numerous examples of common contaminants such as heavy metals, PAHs, organochlorine pesticides, etc. and emerging pollutants such as endocrine disruptors and nanoparticles. This course educates and informs students about the health risks associated with exposure to substances in industrial environments, in food and in the general environment. The knowledge gained will make them alert to and ready to declare any disruption to their health industry leaders and hygienists. |                                                |              |

| The main goal of this course is to highlight our emerging understanding of the mechanisms of transduction of information from outside cells to an appropriate response. This is a 3 credit course that focuses on inter- and intracellular communication, from the generation of signaling molecules through to the cellular responses. It teaches concepts central to understanding cellular signaling mechanisms and it covers the major signaling pathways and several emerging pathways.                                                                                                                                                                                                                                                                                                                                                                                      |                                                |              |
| This course also uses the primary literature to develop a systems-level understanding of the information flow through the various cell signaling pathways and networks. Current areas of research activities in the experimental and theoretical understanding of cell signaling research are emphasized.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                |              |
| <b>BCH610</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Specialized Cosmetology</b>                 | <b>3 cr.</b> |
| This course is designed to provide the subject and techniques of Cosmetology. The students will be exposed to the technical application of products, technical skills, theory and personal development. This course will communicate to students all the information related to skin care, hair care, and nail care.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                |              |
| <b>BCH620 - BCM620</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>General Pharmacology and Cosmetology</b>    | <b>3 cr.</b> |
| Pharmacology is defined as the detailed study of drugs; accordingly teaching pharmacology aims predominantly at communicating to students all the information related to the source, development, physical and chemical properties, biochemical and physiological effects, pharmacodynamics (mechanism of action), pharmacokinetics (absorption, distribution, biotransformation and excretion), therapeutic and other uses of drugs.                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                |              |
| The Cosmetology section of this course is to educate the students in the basic manipulative skills, safety judgments, proper work habits and desirable attitudes necessary to obtain licensure and for competency in entry-level positions in cosmetology or a related career field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                |              |
| <b>BCH622 - BCM622</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Pharmacotherapy</b>                         | <b>3 cr.</b> |

Pharmaceutics is the discipline of pharmacy that deals with the process of turning a new chemical entity (NCE) into a medication to be used safely and effectively by patients. There are many chemicals with pharmacological properties, but need special measures to help them achieve therapeutically relevant amounts at their sites of action. Pharmaceutics also help relate the formulation of drugs to their delivery and disposition in the body. This course aims at introducing students to the various pharmaceutical technologies applied in the preparation of pharmaceutical dosage forms and drug delivery systems. Moreover, the lectures presented demonstrate the correlation between pharmaceutical principles, drug design, formulation, manufacture, and compounding in addition to the techniques applied in each of the stated phases of drug development.

**BCH623 - BCM623 Specialized Pharmacology 3 cr.**

This course studies drugs affecting major organ systems. In each topic, the physiopathology of the disease, the mechanism of action, the pharmacokinetic properties, the pharmacologic and side effects of the pharmacological treatment are detailed to better understand the clinical use, the benefits and the toxicity of drugs.

**BCH627 - BCM627 Clinical Trial Drug Legislation and Guide 3 cr.**

The course is designed to introduce pharmacology and toxicology Master's students to fundamentals of clinical trials and legislation. The first part of this course includes general principles and issues in clinical research design. These are explored through the formulation of the research objective and the research hypothesis and the specification of the study population, the experimental unit, and the response variable(s). The second part of this course will focus on the Lebanese laws and decrees ruling the conditions of registering, importing, marketing and classifying imported or locally manufactured drugs.

**BCH697A - BCM697A Master Thesis 6 cr.**

**Pre-requisites** FSC600 Or SCF600 Or CHM600 Or BCH600

Students must complete a 6 credits research project applied to their major. They are expected to realize a research work in the laboratory, submit a written report and give an oral presentation.

**BIO101 Introduction to Biology 3 cr.**

This introductory course is intended for freshmen and covers a set of essential biological concepts, providing students with a scientific basis for the issues they will confront throughout their lives, such as:

- The chemical bases of life,
- How cells function, harvest and produce energy,
- DNA, chromosomes and inheritance
- Evolution and diversity
- The human body
- Ecology

**BIO201 General Biology I 3 cr.**

This course is an integrated approach to the biology of organisms, covering the chemical and cellular organization of life, the transfer of energy through living systems, as well as heredity, diversity and evolution.

**BIO202 General Biology II 3 cr.**

**Pre-requisites** BIO201

This course is designed to provide in-depth knowledge of the evolution, diversity, and function of plants; the evolution, structure, function, and physiology of animals; and the ecology of organisms, populations, communities, and the globe.

**BIO221 General Anatomy 2 cr.**

This course is an introduction to human anatomy. It covers the study and description of the various component systems of the human body.

**BIO228 General Botany 3 cr.**

The course has two parts: plant histology and biology. Histology is the study of meristems, parenchyma and plant tissues, their origins, their characteristics, and role. Plant biology looks at the lower and higher plants, their characteristics and their classifications.

**BIO271 Laboratory of General Biology I 1 cr.**

**Pre-requisites** BIO201

This laboratory provides a hands-on approach of several biological processes and concepts that have been studied in the accompanying course.

**BIO272 Laboratory of General Biology II 1 cr.**

**Co-requisites** BIO202

This laboratory provides a hands-on approach of several biological processes and concepts that have been studied in the accompanying course.

**BIO321 Human Anatomy & Physiology 3 cr.**

**Pre-requisites** BIO202

This course introduces the basics of human anatomy and physiology, including homeostasis, and the cellular functions of the nervous and endocrine systems. This course will enable the student to establish links between the structure and the function and will present the mechanisms regulating the physiological functions of the human organism.

**BIO320 Physiology 2 cr.**

**Pre-requisites** BIO211

This course aims to introduce homeostasis, defined as the dynamic physiological equilibrium of the organism. It examines the cellular functions of the nervous and endocrine systems. This course will enable the students to establish links between the structure and the function and will present the basic mechanisms regulating the physiological functions of the human organism.

**BIO322 - BLG322 Genetics 3 cr.**

**Pre-requisites** BIO211 Or BIO210 Or BLG211 or BIO201

The purpose of this course is to provide basic knowledge of genetics: cytogenetic (the study of chromosomes), formal genetics (the study of hereditary transmission mechanisms), molecular genetics (the study of nucleic acids, their replication, transcription and translation), and bacterial genetics.

**BIO336 General Immunology 3 cr.**

**Prerequisites** BIO211 or BLG211

This course provides the basics of immunology from a daily practice point of view. It begins with a presentation of the main findings in the field, and biographical excerpts from prominent authors that have contributed to the development of this science. The main immune effectors are described as well as the two major immune processes: non-specific or innate and specific or adaptive immunity. The establishment of immune responses is clearly stated. The course also describes organ transplantation and rejection reactions and outlines major diseases involving the immune system. Finally, some immunological techniques are presented.

| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | BIO322 And (BCH410 Or BCH415 Or BCH300 Or BCH320)                   |              |
| This course is designed to give students a comprehensive understanding of bacterial physiology, metabolism, growth conditions, identification, pathogenesis and microbial control methods. It equips students with the tools they will need to understand and address the complex microbial issues related to environmental science, food science, industrial processes and public health. The first part is devoted to the description of bacterial structure (cytoplasm, cytoplasmic membrane, cell wall, glycocalyx, flagella, pili, etc.). The second part studies bacterial metabolism and growth (different trophic types, growth conditions, culture media, etc.). In the third part the main antibiotic families and bacterial genetics are discussed (mechanism of action, spectrum of activity, resistance mechanisms, operons, horizontal genetic transfers, etc.). The fourth part discusses the mechanisms of pathogenicity in bacteria (virulence, toxigenesis, interactions between host and bacteria). The fifth and last part concerns viruses. The basics of virology are explained as well as the different virus families and types, the mechanism of pathogenicity of the virus and the way it affects host cells. |                                                                     |              |
| <b>BIO413 - BLG413</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Molecular Biology</b>                                            | <b>3 cr.</b> |
| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | BIO411 Or BLG411 Or MEDL200 Or BIO322 Or BLG322                     |              |
| The course begins with a review of nucleic acids and looks at the methods for their extraction, separation and analysis. Secondly, the course extensively studies the regulation of gene expression and provides an update on the changes to the nucleic acids transcriptionally, post-transcriptional and translational. Finally, detailed molecular analysis techniques, cloning, PCR, sequencing and development of DNA banks are described.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                     |              |

| This course is designed to provide students with an understanding of the function and the regulation of the human body and physiological integration of the organ systems. This course content will include the cardiovascular, respiratory, digestive and urinary systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                     |              |

| This course intends to equip the students with basic knowledge of how drugs affect cells, organs and entire organisms. The pharmacological part will mainly focus on general pharmacological principles. The toxicology part intends to give the students' knowledge of toxicological principles such as dose response, and how bioactivation and toxicity of xenobiotic substances are studied.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                     |              |

| <b>Prerequisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | BIO413                                                              |              |
| This course intends to equip the students with basic knowledge of how drugs affect cells, organs and entire organisms. The pharmacological part will mainly focus on general pharmacological principles. The toxicology part intends to give the students' knowledge of toxicological principles such as dose response, and how bioactivation and toxicity of xenobiotic substances are studied.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                     |              |
| <b>BIO471</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Laboratory of Microbiology</b>                                   | <b>1 cr.</b> |
| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | (BIO411 Or BLG411) And (BIO270 Or BLG270 Or BIO271 Or BLG271)       |              |
| The main purpose of this lab is to teach students all the basics to be able to undertake different types of microbiological analysis (water analysis, food and liquid analysis). It will focus on the basics of good manipulation in a microbiology lab and all the precautions to take to avoid contamination. The students will also learn to identify the types and species of bacteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                     |              |

| This course provides students with the opportunity to practice most of the concepts covered in the course of Molecular Biology (BLG413): genomic and DNA plasmid extractions, PCR amplification, enzyme digestion, SDS-PAGE, Western blot and bacterial transformation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                     |              |
| <b>BIO473</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Lab of Biology and Physiology of Plants</b>                      | <b>1 cr.</b> |
| These laboratory sessions contribute to the understanding of how plants function. It provides students with hands-on experience in basic physiological principles related to nutrient deficiencies, membrane permeability and composition, water/nutrient absorption and translocation, transpiration, photosynthesis and physiological functions of growth regulators.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                     |              |

| Topics selected from recent literature on biology are studied in depth. A combination of workshops, announced seminars and announced conferences will be given covering assigned material. For the literature club students will be responsible for submitting several one-page summaries of articles from the current scientific literature. Summaries will be graded on relevance, critical analysis and presentation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                     |              |

| This course covers the basic principles of biotechnology. The first part is a reminder of the analysis of the genome of prokaryotic and eukaryotic cells, methods of recombinant DNA, and in vitro cultures. In the second part, it studies in detail animal and plant transgenesis and their various applications. Industrial methods of preparation of biomolecules (amino acids, organics, antibiotics, etc.) and the use of microorganisms in the environment sector (green biotechnology) will also be examined. Exercises and item analysis supplement this course to give a better understanding and an insight to current research and scientific progress based on biotechnology.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                     |              |
| <b>BIO511</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Applied Immunology</b>                                           | <b>3 cr.</b> |
| The course reviews the normal function of the immune system, recognizing and eradicating pathogens and other foreign molecules, and reports on abnormalities leading to aberrant immune responses and specific immunity. The theoretical aspect is supported by case studies and recent findings discussed through the analysis of scientific articles published recently.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                     |              |
| <b>BIO622</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Physiology and Physiopathology of the Contractile Structures</b> | <b>3 cr.</b> |

This course will enable the students in the Master's degree to deepen their theoretical bases and experimental approach in muscular physiology and physiopathology. In this course, the anatomy, the histology, the functioning and regulation of skeletal, cardiac and smooth muscles will be covered. This course will introduce the students to the scientific reasoning and to the research by describing and analyzing scientific articles.

| The primary goal of this course is to provide an understanding of how the reproductive system of the human body works to create and sustain life. The course starts with an introduction to basic endocrinology, anatomy and physiology of the human reproductive system and examines the processes and regulations of fertilization, pregnancy, birth and human development. Birth control, infertility and sexually transmitted diseases are also discussed.                                                                                                                                                                                                                                               |                                                                    |              |

| This course will enable master's students in physiology to understand the physiologic mechanisms of the endocrine regulation of the organ functions. It covers the regulation, liberation and action (effect) of the different hormones. At the end of each topic, the pathologies due to a lack or excess of the hormones studied will be discussed. At the end of the course the students should be able to recognise most of the hormones produced in the human organism and should be able to understand and analyze the different endocrine pathologies and suggest, when possible, treatment methods.                                                                                                  |                                                                    |              |

| This course will provide a comprehensive overview of the biology and pathology of cancer. It will focus on the genetic and molecular bases of cancer, including the role of mutations in cancer cells and how they lead to the deregulation of essential biological properties (programmed cell death, cell proliferation, and differentiation). Some medical aspects of cancer will also be discussed, such as diagnosis, classification, treatments, etc.                                                                                                                                                                                                                                                  |                                                                    |              |
| <b>BIO631</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Virology and Vectorology</b>                                    | <b>3 cr.</b> |
| This course comprises an introduction to virology, and discusses the different methods to study viruses, their classification, their mechanisms of infection and spreading, focusing on emerging diseases (AIDS, influenza, hemorrhagic diseases, Zika virus...), unconventional agents (prions) and vaccination, as well as the use of viral vectors in gene therapy and biotechnology.                                                                                                                                                                                                                                                                                                                     |                                                                    |              |

| This course studies the methods of genetic manipulations and global analysis of the genome and its expression, as well as directed mutagenesis, gene expression in heterologous hosts and gene therapy. Tangible applications will clarify some of the major achievements of genetic engineering chosen in different fields of application. This will be addressed through critical analysis of recent scientific articles.                                                                                                                                                                                                                                                                                  |                                                                    |              |

| Whole genome sequencing of many organisms, including humans, has created new fields of research. After the study of genomes came the study of proteomes, transcriptomes, metabolomes, etc. The aim of this course is to provide an introduction to each of the -omics fields, as well as practical bioinformatical skills in genomics, transcriptomics, proteomics and metabolomics, knowledge of the major web-resources and an understanding of how these methods are used in scientific research.                                                                                                                                                                                                         |                                                                    |              |

| This course examines the methods of genetic engineering and screening of genomic and cDNA banks. Also covered are the methods of global analysis of the genome and its expression, site-directed mutagenesis, gene expression in heterologous hosts and gene therapy. Legal and ethical issues related to genetic engineering will be mentioned without being developed. Exercises will be performed and aim to simulate genetic engineering problems encountered in research and development. Practical applications will illustrate major achievements of genetic engineering chosen in different fields of application. Therefore, students will perform critical analysis of recent scientific articles. |                                                                    |              |

| The aim of this course is to familiarize students with global approaches in genomics, their advantages and limitations. Several methods will be introduced (genome sequencing, comparative genomics, functional genomics, etc.), and practical examples will be given for each situation.                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                    |              |

| Whole genome sequencing of many organisms, including humans, has created new fields of research. After the study of genomes came the study of proteomes (entire sets of proteins expressed by a genome), mainly known as structural and functional proteomics. This course aims to introduce concepts and methods in proteomics (structure analysis, organization, purification and detection techniques, as well as study of protein interactions), and to draw the scientific approach leading from a genetic structure to the structural and functional properties of a protein.                                                                                                                          |                                                                    |              |

| At the completion of this course, students will have knowledge of environmental hazards with known and possible risks and they will have a better understanding of how these hazards are formed, their fate and distribution in the environment, and how to assess their potential effects in humans. This course will not be a comprehensive survey of all areas of study within environmental physiology, but instead will cover a few major topics in detail like endocrine, developmental and reproductive physiology.                                                                                                                                                                                   |                                                                    |              |

| This course presents a general introduction to chemistry. It highlights the structure of the atom (various models and properties of the elements in the periodic table), various chemical bonds (Lewis structure, VSEPR rules), thermochemistry (thermodynamics and chemical equilibrium), kinetic chemistry (reactions rate orders, Arrhenius law), solutions chemistry (acids and bases and various acid base equilibrium), complexation, liquid solid equilibrium and solubility product, redox titration and electrochemical cells.                                                                                                                                                                      |                                                                    |              |

| This course brings together the necessary knowledge to understand the reactions in solutions that are the fundamentals of many methods used both in the fields of chemistry, biochemistry or biology, as well as in pharmaceutical analysis. After a reminder of key points and generalities, the course develops four main components: acid-base equilibria, complexation equilibria, redox reactions and the formation reactions of poorly soluble compounds.                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                     |              |

| The general chemistry laboratory aims to develop different skills for the practical application of theoretical knowledge of general chemistry. Techniques to be learned: preparation and dilution of solutions, experimental verification of the Nernst equation, realization of different types of acid-base and redox titration by volumetric, calorimetric, pH-metric or potentiometric monitoring, and the study of solubility and precipitation reactions and characterization of ions present in a given matrix. The goal of the lab course is to ensure that students are capable of understanding the chemical concepts and to carry out experiments safely and carefully in the laboratory, to obtain data accurately and to manipulate the data correctly.                                                                                                                               |                                                     |              |

| Organic chemistry is an introduction to the structure, reactivity, and properties of organic compounds. This course is intended to introduce students to the major concepts in organic chemistry and prepare them for the upper level classes in chemistry and biochemistry they will take in the coming semesters and the organic chemistry requirements for medical schools. Topics to include: introduction and review of electronic structure and bonding in organic molecules; nomenclature of organic compounds; structure and properties of alkanes, cycloalkanes, and alkyl halides; stereoisomerism and chirality of organic compounds; and the structure, properties and reactivity of alkynes and alkenes.                                                                                                                                                                              |                                                     |              |

| The objectives of this course are to provide knowledge and mastery of the basic tools of thermodynamics necessary for learning chemical sciences to assess observable phenomena characteristic parameters and apply some basic principles to other aspects of chemistry. Topics: first principle and enthalpy; thermochemistry; second principle and entropy; Gibbs; bioenergetic aspects; and chemical equilibria. The different kinds of chemical reactions are also covered in this course, in order to establish the fundamental bases to calculate the reaction rates of a system. Students will be introduced to concepts of chemical kinetics and surface chemistry. They will explore chemical kinetics: reaction rate, order of reaction, simple reactions, complex reactions, and activation energy. The course also covers kinetic theory, and homogeneous and heterogeneous catalysis. |                                                     |              |

| The course material covers quantum theory for chemists and introduces the basic theoretical concepts of molecular orbital theory and spectroscopy. The successful students will develop a clear understanding of the origin of molecular orbitals in chemistry, how they are used to understand chemical bonding, and know how simple quantum model systems can be applied to understand spectroscopic data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                     |              |

| This course focuses on various spectroscopic methods. The goal is to introduce students to the theory and practice of various spectroscopic techniques used in chemistry and related sciences. The students will also learn the instrumentation and applications (UV-vis, IR, SAA, fluorescence, NMR and mass spectroscopy).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                     |              |

| The purpose of this lab is to give students the opportunity to practice the knowledge they have learned in class. They will use the following techniques: titration of a polyacid, preparation and properties of buffer solutions, titration by indirect redox, complexometric assay, conductometric titration, study of solubility, color indicators, and determination of an equilibrium constant by the method of partition coefficients.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                     |              |

| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | CHM325                                              |              |
| This course describes the aggregation states of matter: gas, liquid, solid. We introduce the thermodynamics of mixtures, physical transformations of pure substances, phase diagrams, thermodynamic criteria for equilibrium between phases, state equation, kinetic theory of gas, statistics distribution of Maxwell and Boltzmann, intermolecular collisions, effusion velocity, diffusion, viscosity, the vapor and sublimation pressure, surface tension, viscosity and solubility will be studied. Properties and interpretation of the conductivity of solids will be evaluated according to the chemical constitution of a solid. At the end of the course, students will present a research project on a selected topic in the field.                                                                                                                                                     |                                                     |              |

| The purpose of this course is to introduce the field of polymers and the very large world of plastics to students. The various methods of synthesis and the types of classification of the polymers and copolymers will be detailed. The course then looks at physicochemical properties (structural and geometric, mechanical, thermal, electrical) and various additives used in the manufacture of plastics (plasticizers, fillers, lubricants, stabilizers) will be presented. The                                                                                                                                                                                                                                                                                                                                                                                                             |                                                     |              |

kinetic and thermodynamic data of the various steps in the reactions of polymerization and copolymerization will be studied (anionic, cationic and radical). The composition and structure of the copolymers will be evaluated according to the reactivity ratios.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                          |              |

| This course provides students with an overview of industrial chemistry and enables them to develop a process diagram and prepare to apply the knowledge and skills acquired in their subsequent studies. We also define the different types of chemical reactors, the balance mass and energy, the operating parameters of the processes and their acquisition mode. Finally, an economic and environmental study related to the chemistry of the process will be followed. At the end of the course, students will present a research project on a selected topic in the field.                                                                                               |                                                          |              |

| This course gives students information on various matter changes during conservation and technological treatments. It defines the main biochemical compositions of foodstuffs such as milk, meat, cereals, oils, etc. It also outlines the various toxic compounds naturally present in food as well as the range of additives.                                                                                                                                                                                                                                                                                                                                                |                                                          |              |

| This laboratory aims to introduce students to the different experimental techniques of quantification and characterization: the separation process and spectroscopic evaluation. All techniques deal with multidisciplinary skills for those with an interest in industrial chemistry, biochemistry and SVT.                                                                                                                                                                                                                                                                                                                                                                   |                                                          |              |

| This course is dedicated to quality and control. It looks at how to implement quality control practices and which criteria are involved in quality control. To understand all dimensions of quality control, the fields of drugs, food and the environment are discussed. The focus on these areas is explained by the improvement requirements for continuous quality.                                                                                                                                                                                                                                                                                                        |                                                          |              |

| Topics selected from recent literature on chemistry are studied in depth. A combination of workshops, announced seminars and announced conferences will be given covering assigned material. For the literature club, students will be responsible for submitting several one-page summaries of articles from the current scientific literature. Summaries will be graded on relevance, critical analysis and presentation. Submissions will be made available via eLearning and may become part of the material covered by quiz/exam questions.                                                                                                                               |                                                          |              |

| Industrial unit operation is a subdivision of an industrial process which generally consists of a physical or chemical process. This course aims to provide the theoretical bases of some major unit operations classes: equilibrium between phases; dispersion-emulsion; decantation-sedimentation-centrifugation; LL extraction (simple and countercurrent); nucleation and crystallization; and filtration at constant volume or constant pressure. This course develops the classical methods for the resolution of such operations and describes the main technologies used for these operations. Students will present a research project for a selected unit operation. |                                                          |              |

| This course has a wide-ranging content which is required for recognition of the course in a large industrial spectrum. It aims to understand the issues of interdisciplinarity in the industrial field. This course emphasizes the technical side (optimal production, stability), the economic aspects (price of returns, balance mass and energy) and social issues (safety and environment). At the end of the course, students will present a research project on a selected topic in the field.                                                                                                                                                                           |                                                          |              |

| PART I: elements of physics<br>Atomic physics, physical properties of materials, electromagnetic spectrum (infrared, ultraviolet and x-rays), particles as probe in diagnostic, radiation-matter interaction. Raman effect, radioactive decay<br>PART II: diagnostic techniques                                                                                                                                                                                                                                                                                                                                                                                                |                                                          |              |

Optical spectroscopy (Raman, Ir and UV), thermography, electron microscopy and microanalysis, X-Ray Fluorescence (XRF), traditional radiography and tomography (TAC), X-ray diffraction, ion beam techniques (outlines), colorimetry, dating methods based on radioactivity.

PART III: Laboratory experiments.

Portable XRF (demonstrative); Electron microscopy and microanalysis (demonstrative); IR spectroscopy (demonstrative); Measure of gas emission spectra using a spectrophotometer; Subtractive and additive color; colorimeter (demonstrative); Digital Radiography;

**CRCS220 Documentation and Representation 2 cr.**  
**Pre-requisites** ARC222

The course aims to provide the knowledge and skills necessary to consciously apply the language of design, aimed at analyzing, understanding, relief and communication of the morphology of the artifacts paintings on canvas, the wooden artifacts and multi-material artifacts. Part of the course is dedicated to the documentation and cataloging of cultural heritage as a first approach to knowledge

The course aims to provide, on the one hand, a basic understanding of the historical and scientific foundations of the encoded methods of graphic representation that allows you to read, in the works of figurative art, the geometric structure, the other the theoretical and practical tools for analyze and represent through a conventional language artifacts of a different nature .The representation techniques used will range from the traditional ones of freehand drawing and technical drawing to digital supported by specific software, with particular reference to the documentation of the restoration sites.The course aims to direct the student to the use of techniques and methods for the detection and graphical representation for the purposes of their analytical and synthetic problems of the graphic documentation for the restoration of cultural heritage.

**CRCS270 Conservation & Restoration Lab I 4 cr.**

This course is a part of the applied lessons and practical work in conservation and restoration.

Lessons Applied: Book Script Terminology - Book Archeology - Copper and Parchment: Origin and Manufacture - Identification of Animal Species and Skin Recognition - Factor Degradation - Card Format and File Creation - Technique Photography and images for the restoration and conservation of cultural property

Practical activities: sewing test - realization of the primary and secondary capital - proof of beveling in copper and parchment - proof of beveling and restoration - execution of a modern ligature.

**CRCS275 Artwork Lab II + Internship 4 cr.**  
**Pre-requisites** CRCS270 CHM210

Phenomena of alteration and deterioration of wooden objects: Analysis of the causes and phenomenology of degradation. Methods and materials of treatments for preservation and restoration (disinfection, consolidation, sanitation support) - Plotting and documentation of objects - Prevention and Safety in restoration and construction laboratories - Resilient pack and structures - Integration of missing elements and mouldings.

**CRCS305 Christian & Medieval Archeology 3 cr.**

This course provides information on the essential basis of Christian and medieval archeology, either from a historical point of view of this discipline or from a methodological point of view, presenting the development of research themes, results and methodological problems, including the reading of some archaeological contexts.

**CRCS310 Petrography for the Cultural Heritage 3 cr.**

Scientific and technical-commercial criteria for the classification of natural stone materials used in Cultural Heritage. Analysis of most common rock-types, focusing on historical stone materials from local country. Petrographic techniques relevant to Cultural Heritage, with examples of current analytical methods; representation of analytical results. Basic elements for the petrographic description of mortars. Types, mechanisms and causes of deterioration of historic and contemporary natural stone materials. Italian and European standards and recommendations concerning the use and conservation of natural stone materials. Petro-archeometric and conservation case studies.

**CRCS315 Applied Microbiology for the Cultural Heritage 3 cr.**  
**Pre-requisites** CHM210

The following items will be developed and investigated through the analyses of some cases selected on the basis of the main types of artistic artifacts.

- Diversity of biodeteriogens and biodeterioration processes.
- Environmental factors affecting biological contamination.
- Biodegradation and biodeterioration.
- Biodeterioration agent's diversity; technical analysis (microbiological, botanical entomological analysis).

**CRCS320 Applied Chemistry for the Cultural Heritage 3 cr.**  
**Pre-requisites** CHM210 CHM210

Degradation and decay of historical and artistic artifacts.

The degradation causes. Environmental and anthropic factors. Role of atmospheric pollutants. The chemical and physical mechanisms of degradation. Degradation of the materials

Ageing of organic materials. The mechanism of oxidation and promoting agents. Decay of binders and of pictorial varnishes. Degradation of cellulosic and protein materials, and analogous: wood, paper, textiles.

The degradation of stone materials, naturals and artificial. Mural paintings.

The degradation of metals: corrosion processes in particular cases of artistic interest.

Methodology of restoration interventions.

Cleaning, consolidation, protection.

Solvents and solutions. Reactive solvents. Vapor pressure, boiling point, viscosity. Retention.

Organic solvents: structure, polarities, solvent power. Solubility parameter and Teas triangle.

Toxicity and risks management.

Aqueous methods: surface tension and wettability; surfactants: structures and characteristics.

Emulsions: o/w and w/o. Resin soaps.

Thickening agents: gels, solvent gels. Poultices. Chelating agents: structures, reactions and applications.

Enzymes in conservation: structure, types, mechanism of action.

Consolidation. Organic and inorganic products. Surface and bulk consolidation.

Evaluation criteria: compatibility of materials, reversibility, efficacy.

Traditional inorganic consolidants.

Organic consolidants.

The structure of polymer compounds: definitions, nomenclature, classifications. Examples of chemical structures and of architectures. Molecule weights and averages.

Silicon based products.

Polymers for consolidation and for protection.

Regulations and standard protocols for interventions on cultural assets.

**CRCS330 Museography 3 cr.**

This course is designed for students for students aspiring to specialize in museology and museography, for future museum professionals. As an introduction to this discipline, it aims to provide basic theoretical formation and a first approach to museum management. Its objective is to enable students to acquire knowledge and skills by covering a wide range of fundamental subjects specific to the museum institution. Thus, throughout seven thematic chapters, the history, the definition and the important diversity of museums, the different roles and functions exercised by the museum nowadays, the question of its community, will be studied successively, and look in depth at the four essential functions or missions of the current museum, which are: the presentation, conservation, scientific research, and animation. The detailed examination of the museological and museography questions discussed will be illustrated by numerous reference examples at the local and international levels. The course will also include the analysis of specialized documentaries projected in class. In terms of personal work, the students will have to work on a research project which includes the visit and the study of a Lebanese museum of their choice (in various aspects: history, conception, museum layout, activities, etc.), followed by a written report and an oral presentation on the institution and the pieces on display.

**CRCS370 Artwork Lab III 4 cr.**

**Pre-requisites** CRCS275 CHM210

Phenomena of alteration and deterioration of wooden objects: Analysis of the causes and phenomenology of degradation. Methods and materials of treatments for conservation and restoration (disinfection, consolidation, sanitation support) - Plotting and documentation of objects - Prevention and safety in restoration laboratories and in construction sites - Parchettatura and elastic restraint structures - integration of missing elements and mouldings.

**CRCS375 Artwork Lab IV + Internship 4 cr.**

**Pre-requisites** CRCS370 CHM210

The phenomenology of degradation and treatment methodologies of the textile support: rheological performance of constituent materials. Analysis of the causes and phenomenology of the degradation of the support, preparatory layers and illustrations - History of techniques and traditional methods of restoration - Illustration of case studies - Velinatura, pre-consolidation technique, consolidation and joining layers - Improvement of the surface by lowering the cracks, treatment of acidification and cleaning of repaired textiles. Structural reorganization of layers: rheological performance of constituent materials. History of traditional techniques and methods for the structural recovery of paints - Illustration of case studies - Innovative technologies applied to textiles - lining and insertion of lining pads - lining with synthetic products - tension systems - illustration of case studies.

**CRCS405 Theory & Techniques of Restoration II 3 cr.**

**Pre-requisites** CRCS205 CHM210

The first part of the course will focus on the following topics:

- Definition, methods and areas of museology;
- History, identity and aims of the museum from the studio and the Wunderkammer to the XIXth models and the different kinds of the contemporary museum;
- Legislation, standards and professions.

In aim of pointing out the relation between museums and the restoration culture, the second part will describe some paradigmatic cases of this interaction within the local context during the XIXth and the XXth Centuries.

**CRCS410 Science & Technology of Materials 3 cr.**

**Pre-requisites** CRCS320 CHM210

This course aims to provide knowledge on elements of structural chemistry and thermodynamics which are useful for understanding the chemical and physical phenomena of polymeric materials. These bases can be used to improve the choice of materials and interventions to be made in the conservation of cultural heritage.

**CRCS470 Artwork Lab V 3 cr.**

**Pre-requisites** CRCS375 CHM210

Artworks: structural improvements of layers - Rheological performance of constitutive materials. History of traditional techniques and methods for the structural recovery of paintings. Illustration of case studies - Techniques of total and partial lining, insertions, compensation - innovative technologies applied to textiles - lining and insertion of lining pads - lining with synthetic products - tension systems - illustration of case studies. Techniques for cleaning polychrome artworks: cleaning the surfaces and elimination of overlapped substances - Materials and methods: acidic medium and water base, thickeners, buffer solutions, organic solvents, solvents gels, emulsions, pregelatinized resin soaps - Emulsions, thickening agents. Illustration of case studies - Exercises and laboratory tests aiming to identify cleaning products and methods.

**CRCS475 Artwork Lab VI+ Internship 3 cr.**

**Pre-requisites** CRCS470 CHM210

Artworks: structural improvements of the layers

Rheological performance of constituent materials. History of traditional techniques and methods for the structural recovery of paintings. Illustration of case studies - Techniques of total and partial lining, insertions, compensation - innovative technologies applied to textiles - lining and insertion of lining pads; - lining with synthetic products - tension systems - illustration of case studies.

Techniques for cleaning polychrome artworks: : cleaning the surfaces and elimination of overlapped substances - Materials and methods: acidic medium and water base, thickeners, buffer solutions, organic solvents, solvents gels, emulsions, pregelatinized resin soaps - Emulsions, thickening agents. Illustration of case studies - Exercises and laboratory tests to identify cleaning products and methods.

**CSC211 Discrete Methods 3 cr.**

**Prerequisites** MAT202

This course introduces the discrete methods used in computer science and applied mathematics. The topics that will be covered are regular languages, regular expressions, finite automata and non-regular languages. It also discusses the basic elements in number theory and introduces graph theory. It introduces induction proof and recurrence relations.

**CSC212 Computer Organization and Assembly Language 3 cr.**

The course is designed to introduce computer science and information technology students to the basics of computer architecture and low level programming, i.e. assembly code and hardware manipulation. The course will focus on the Intel x86 assembly language, number representations, logic circuits, Boolean algebra and logic simplification, addressing modes, input/output devices, system buses, memory systems, memory occupation, computer arithmetic, instruction sets and the design, control, and structure of CPUs.

**CSC214 Programming I 3 cr.**

This course enable students to acquire a practical method to solve problems using the C++ programming language. It looks at methods for problem analysis, structural and detailed conception of solutions, base concepts of pseudo code and flow-charts, and the coding and verification of programs. Subjects include: introduction to C++ language, basic concepts of the language, types, expressions, control structures (selection, repetition), one and two dimensional arrays, strings, functions, prototypes, and text files. The course is completed by lab workshops.

**CSC215 Programming II 3 cr.**

**Prerequisites** (INF214 Or CSC214 Or INF219) And CSC270

This course introduces many techniques used to organize, search, sort and manipulate data after completing new concepts in the C++ language (structures, pointers, multidimensional arrays and binary files). It emphasizes arrays, linked lists, stacks and queues. Recursion and a simple sorting algorithm are also covered. The course is completed by lab workshops.

**CSC270 Programming Laboratory I 1 cr.**

**Prerequisites** CSC214

The course enables students to acquire a practical method to solve problems using the C++ programming language. It includes: applications of the C++ language, basic concepts of the language, types, expressions, control structures (selection, repetition), one and two dimensional arrays, strings, functions, prototypes, and text files. This course is done entirely in the lab, and emphasizes the practical approach.

**CSC271 GUI Programming 1 cr.**

**Prerequisites** (CSC214 And CSC270) Or (INF214 Or INF219)

Students will learn about the OpenGL library. Different applications will be done in the lab and as homework using OpenGL with the C++ programming language. Students will also learn how to write a clean code as well as about the history of GUI. They will learn how to do animation and transformation. By the end of the semester a small game will be produced by the students.

**CSC272 Programming Laboratory II 1 cr.**

**Prerequisites** CSC215

This lab introduces many techniques used to organize, search, sort and manipulate data after completing new concepts of the C++ language in the course (structures, pointers, multidimensional arrays and binary files). It emphasizes arrays, linked lists, stacks and queues. Recursion and a simple sorting algorithm are also covered.

**CSC300 Hardware Technology 3 cr.**

**Prerequisites** CSC212 Or INF212

The fast development of technology in the last few years has considerably reduced the lifespan of the material and computer software. This course examines how computers work on the level of the hardware. The purpose is to arrive at an answer to this question by bringing together the elements which play a significant role in the material structure of computers.

**CSC312 Advanced VB Programming 3 cr.**

**Prerequisites** (CSC214 And CSC270) Or (INF214 Or INF219)

This course introduces the concept of event-driven programming and the windows environment. The classes begin with simple forms (Windows) and end with ADO.Net Objects which connect Databases to the VB.Net application, graphics programming. The course also covers Text and Binary file access and the Winsock control for networking.

**CSC314 Object Oriented Programming 3 cr.**

**Prerequisites** (CSC214 And CSC270) Or INF214

The main objective of this course is to introduce the basic concepts of object oriented programming, while using the pure object oriented language of Java. UML will be presented succinctly in order to understand the approach of the modelling by objects. Some useful static diagrams are also presented, mainly object and class diagrams. A complete project illustrating the different approaches of this course will be presented as a model for future projects.

**CSC315 Data Structures and Algorithms 3 cr.**

**Prerequisites** INF211 Or CSC211 And (CSC229 Or INF229 Or (CSC215 And CSC272) Or INF215)

This course covers many advanced programming techniques. We focus on ADTs, especially trees and hash tables. Implementations are based on the object oriented approach. The analysis of the execution time of a program and the memory space that it uses will be considered throughout this course in order to compare theoretically different ADTs and algorithms.

**CSC319 Technology and Networks Infrastructure 3 cr.**

**Prerequisites** INF204 Or MIS210 Or INF212 Or CSC204 Or CSC212

This course aims to introduce the basics of computer networks. Students will study infrastructures, features and network topologies, transfer techniques, switching, encoding, transmission and routing, the reference model, the protocols of different layers, including deepening the study on the TCP / IP architecture used in the Internet.

**CSC320 Database Systems 3 cr.**

**Prerequisites** (CSC214 And CSC270) Or (INF214 Or INF219)

This course presents the principles of databases and familiarizes the students with the design and use of relational databases. It covers DBMSs, architecture and functions, entity-relationship and relational data models, relational database design, theory of normalization and the SQL language. This course includes laboratory work under ACCESS DBMS.

**CSC343 Mobile Programming 3 cr.**

Today's applications are increasingly mobile. Computers are no longer confined to desktops and laptops but instead live in our pockets and hands. This course teaches students the general structure of a mobile application on different mobile platforms. Students will also learn how to build mobile applications for Android and Windows Phones, and how to test and deploy them.

**CSC352 Theory of Programming Languages 3 cr.**

**Prerequisites** CSC211 Or INF211 And (INF215 Or CSC215 Or INF229 Or CSC229 Or CSC312 Or INF312)

A programming language is a programmer's principal interface with the computer. More than just knowing how to program in a single language, programmers need to understand the different styles of programming promoted by different languages. In their professional life, they will be working with many different languages and styles, and will encounter many different languages over the course of their careers. Understanding

the variety of programming languages and the design tradeoffs between the different programming paradigms makes it much easier to master new languages quickly. Understanding the pragmatic aspects of programming languages also requires a basic knowledge of programming language translation and runtime features such as storage allocation. In this course we explore the major issues in both design and implementation of modern programming languages and provide a basic introduction to the underlying theoretical models on which these languages are based. The emphasis is on fundamental concepts. Several languages are highlighted in sufficient detail to enable the students to write programs that illustrate the relationship between a source program and its execution behavior.

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |              |

|                      | This course describes the key principles of successfully managing a project from the planning stage to the end, showing the students how to define the different steps and measure and track their progress. During this course, the students will learn concrete and efficient methods to systematically improve the planning and realization of each step of this software development process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |              |

|                      | In this lab students will apply their knowledge in VB. They will apply the concept of event-driven programming and the windows environment. The classes begin with simple forms (Windows) and end with ADO.Net Objects which connect Databases to the VB.Net application, graphics programming.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |              |

|                      | The aim of this course is to formulate a wide variety of real-life problems and to solve them using methods based on graph theory and linear methods. Concerning graph theory, we will particularly study the following problems: shortest path, minimum spanning tree, maximal flow network, and finding a critical path in a project network. As for linear methods, linear programming problems will be solved graphically and by using the Simplex algorithm and duality. We will also see how to solve integer programming problems using the branch-and-bound method.                                                                                                                                                                                                                                                                                                                                                   |              |

|                      | This course will teach students about the importance of the human-computer interface in software design and development. The objectives of the course are: to facilitate communication between human factors engineers and computer scientists on user interface development projects; to provide the future user interface designer with concepts and strategies for making design decisions; to show the future user interface designer the tools, techniques, and ideas for interface design; to introduce the students to the literature of human-computer interaction; to stress the importance of good user interface design; and finally to be able to think differently, imaginatively and creatively.                                                                                                                                                                                                                |              |

|                      | This course covers the architecture and protocols of modern computer networks. It presents the networking protocol models OSI and TCP/IP by discussing the different layers, their functions, roles, and services.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |              |

| <b>Prerequisites</b> | INF314 Or CSC314                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |              |
|                      | The course covers the fundamental concepts of operating systems, emphasizing single-machine systems. These concepts include processes, threads, synchronization, scheduling, memory management, file and I/O management, and user program execution. Popular operating systems (e.g., UNIX, LINUX, and Windows) are used to illustrate implementation of these concepts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |              |

|                      | The aim of this course is to enable students to become familiar with the development of complex database applications. In this course the students will learn to manipulate in a complex manner the data contained in an Oracle database using the PL/SQL procedural language. In addition to the basic skills in PL/SQL programming, the course will cover the most important concepts of the PL/SQL programming language such as: cursors, stored procedures and functions, triggers, exception handling, and transactions.                                                                                                                                                                                                                                                                                                                                                                                                 |              |

|                      | In this course, students will learn about the following subjects: tasks of the database administrator; identifying the various components of the Oracle architecture; managing Oracle instance; creating a database; using a data dictionary and dynamic performance views; maintaining the control file; maintaining redo log files; managing table spaces and data files; storage structure and relationships; managing undo data; managing tables; managing indexes; maintaining data integrity; managing password security and resources; managing users; managing privileges; managing roles; backup; and about recovery, environment and applications.                                                                                                                                                                                                                                                                  |              |
| <b>CSC430</b>        | <b>Systems and Networks Administrator</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>3 cr.</b> |
| <b>Prerequisites</b> | INF319 Or CSC319 Or CSC212 Or INF212                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |              |
|                      | The goal of this course is to prepare the students for the task of administrator by introducing them to the management of a UNIX environment. After an introduction to the problems bound to the multi-user and multi-task nature of the UNIX system, we introduce the most useful UNIX commands and the administrator's main tasks: user management, the device drivers, services management, network management, control of scripts on a shell, compression, and backup. The students are then trained on the complete installation of a Linux system.                                                                                                                                                                                                                                                                                                                                                                      |              |
| <b>CSC436</b>        | <b>Advanced Programming Project</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>2 cr.</b> |
| <b>Prerequisites</b> | CSC360 Or INF360 Or CSC343                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |              |
|                      | In the beginning of the semester, students need to set up with their instructors a title and a detailed description of their projects. The instructors of all the sections of the courses will meet within the first three weeks of the semester. During this meeting they will accept, reject, or modify the proposed project. If the project was rejected they need to propose to the student another one. After this meeting, the proposal of every project will be signed by the student as well as the instructor. Instructors need to meet with students at least once every two weeks. During this progress meeting, students need to show the instructors what they did during the two week period and what they are planning to do in the coming two weeks. By the end of the semester, students will have a 10 to 15 minutes presentation. During this presentation instructors from other sections may be present. |              |
| <b>CSC438</b>        | <b>Internship Report</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>1 cr.</b> |

**Prerequisites** CSC360 Or INF360 Or CSC343

In the beginning of the semester, students need to find an internship. They have to get the approval of the department and the instructor of the course. They must also describe briefly the type of work they are going to do during their internship. The internship will be a minimum of a 150-hour work experience. Instructors need to meet with students at least once every four weeks. During this progress meeting, students need to show the instructors what they did during the four week period and what they are planning to do in the coming four weeks. By the end of the semester, students will have a 10 to 15 minutes presentation. During this presentation instructors from other sections may be present.

**CSC460 Information System Security 3 cr.**

This course provides an overview of the problems and solution elements related to security of information systems and networks. It covers network management topics such as definition of network management, network management protocol SNMP, MIB, SMI and RMON as well as network security topics such as security attacks and services, cryptography, network security applications and system security. We treat both aspects of security governance, risk management, evaluation, operational management of security and also technologies that achieve security services.

**CSC461 Parallel & Distributed Computing 3 cr.**

A selection of topics from the following: the challenges faced in constructing parallel and distributed applications, including testing, debugging and performance evaluation. Various implementation techniques, paradigms, architectures and programming languages including: Flynn's taxonomy, MPI, MapReduce, OpenMP, GPGPU, concurrency and multi-threading.

**CSC500 Software Engineering 3 cr.**

This course is the presentation of the software engineering principles, methodologies and metrics. The topics of software engineering management, process and quality are presented in an integrative approach, stressing software improvements through measurements of software products and processes. Additional topics covered include system and software writing requirements, formal specification analysis, formal description reasoning, models of standard paradigms, and translations of such models into formal notations. The Unified Modeling Language (UML) is explained and used throughout the course. New topics are also covered such as Object Oriented and software reuse. In brief, the goal of this course is twofold: (1) it presents the evolution of software engineering techniques; (2) it provides an overview for further research in the domain.

**CSC521 Artificial Intelligence 3 cr.**

This course covers the theory and applications of knowledge-based systems. Topics include algorithmic models of problem solving, knowledge representation, reasoning, planning, decision-making, machine learning, perception, action, communication, and interaction. There is also a review of applications such as intelligent tutoring and multi-agent systems.

**CSC522 Advanced Computer Networks 3 cr.**

Advanced topics in computer communication networks reflecting current advances in research and applications in this area. Topics include: TCP/IP technology, routing protocols and algorithms, multicast, MPLS, Virtual Private Networks (VPN), Quality of Service (QoS), Voice over IP (VoIP), P2P networks, and wireless LAN.

**CSC530 Advanced Database Systems 3 cr.**

Advanced topics in the area of database management: query processing, translation into relational algebra, operations algorithms, query optimization, heuristics and cost estimation, transaction processing, concepts and theory, transactions properties, schedules serializability, transaction support, concurrency control issues and techniques, crash recovery techniques, handling the buffer pool, the WAL protocol and the ARIES algorithm, WEB databases, intranets and extranets problems, middleware, and data security. This course includes a project and a synthesis paper.

**CSC540 Network Management and Security 3 cr.**

This course addresses the issues of network management and security. It covers network management topics such as definition of network management, network management protocol SNMP, MIB, SMI and RMON as well as network security topics such as security attacks and services, cryptography, network security applications and system security.

**CSC560 Information System Security 3 cr.**

This course provides an overview of the issues and potential solutions related to the security of information systems. We look at aspects of the governance of security, risk management, evaluation of operational safety management and also technologies that achieve security services.

**CSC570 Multimedia and Computing Systems 3 cr.**

The convergence of computing, communications and display technologies has led to interest in the processing of multiple data types. The integration of text, sound, images, and video in modern presentations requires compression, synchronization, database, and communication methods. This course covers the state-of-the-art technology for multimedia computing. The course topics will cover current media types, images, video, audio, graphics and 3D models in terms of algorithms and data structures for their capture, representation, creation, storage, archival, transmission, assembling, presentation and retrieval.

**CSC601 Special Topics in C. Sc. - I 1 cr.**

**Prerequisites** FSC600 Or SCF600

Topics selected from recent literature on computer science are studied in depth. Students will participate in a series of conferences presented by experts.

**CSC602 Special Topics in C. Sc. - II 1 cr.**

**Prerequisites** CSC601

Topics selected from recent literature on computer science are studied in depth. Students will participate in a series of conferences presented by experts.

**CSC603 Tutorial in Computer Science 1 cr.**

**Prerequisites** CSC601

Topics selected from recent literature on computer science are studied in depth. Students will be responsible to present selected topics of the current scientific literature. They will be graded on relevance, critical analysis and presentation.

**CSC630 Distributed Database Systems 3 cr.**

This course provides an in-depth discussion of the concepts and design principles used in distributed database systems. It covers the architectural foundations of distributed database management systems topics as well as the application and the system level topics. Application level topics include distributed database design models in addition to the fragmentation, replication, and allocation techniques. System level topics include query processing, query optimization algorithms, transaction management, reliability protocols, concurrency control, type of failures and recovery in distributed database systems.

**CSC632 Data Warehousing 3 cr.**

This course presents in detail the concepts of data warehousing. It introduces the different architectural issues for a data warehouse and data marts. It explains the different design levels used for creating a data warehouse, such as the multidimensional design, the physical data warehouse

design and the extraction, transformation and loading phases. Additionally, the course covers the OLAP tools as well as the extension of the SQL language, and the MDX language to support data warehouse creation and manipulation.

**CSC634 Data Mining 3 cr.**

Students will study data mining techniques, data mining tools, data visualization, and parallel data mining models. The techniques will include the application of well-known statistical, machine learning and database algorithms including decision trees, similarity measures, regression, Bayes' theorem, nearest neighbor, neural networks and genetic algorithms.

**CSC635 Database System Administration 3 cr.**

This course looks at advanced database administration. Subjects covered include: tasks of the database administrator; identification of various components of the Oracle architecture; managing parameter files; managing tablespaces; storage structure and relationships; creation of database; managing tables, indexes, profiles, roles, and users; managing privileges; managing password security and resources; backup; recovery; fine-tuning of the database; auditing and security of the database. Students are able to develop an understanding of the internal structures and organization of a given database using Oracle10G Database Administrator, as well as applying all the features of the planning, tuning, monitoring, security, backup and recovery.

**CSC655 Server Configuration and Administration 3 cr.**

This course will provide students with an in-depth knowledge of server administration and configuration. The material will cover system configuration (files system, file sharing), network services (DNS, Mail, Web, DHCP, FTP, SSH, RAS), installation, configuration and administration of these services, how to manage users and hosting accounts, automating user account management, security issues, and troubleshooting. Hands-on experience through labs and projects will reinforce the reading. This course will teach students how to perform advanced administration tasks on Linux/Windows Enterprise Server: installation and manual configuration, performance tuning, backup and recovery services, studying of Microsoft Windows Active Directory (administrative tasks required to centrally manage large numbers of users and computers, multiple domains).

**CSC697A Master Thesis 6 cr.**

**Prerequisites** SCF600 Or FSC600 Or INF600

Students must complete a research thesis in computer science. They are expected to realize a research work in the laboratory, submit a written report and give an oral presentation. Their work needs to be supported by simulation or implementation.

**CTP210 Counterpoint I 2 cr.**

2 parts A. 1st and 2nd species (note against note and two against one) B. 3rd and 4th species (4 notes against one and syncopations) C. 5th species (Florid Counterpoint).

**CTP220 Counterpoint II 2 cr.**

**Pre-requisites** MPR301 Or MPR512 Or MPR363 Or CTP210

Counterpoint of 3 and 4 parts - A. Cp. to 3 parts, B. Cp. to 4 parts, C. Cp. Invertible.

**CTP330 Counterpoint III 2 cr.**

**Pre-requisites** MPR 302 Or MPR 522 Or MUP 463 Or CTP 220

Counterpoint of 3 and 4 parts - A. Cp. to 3 parts, B. Cp. to 4 parts, C. Cp. invertible

**CTP440 Counterpoint IV 4 cr.**

**Pre-requisites** MPR 303 Or MUP 563 Or CTP 330

The Fugue. A. The first elements of the fugue: exhibition, counter-exhibition, theme, answer. B. The second elements of the fugue (entertainment, strata, pedal), with analysis of Bach's fugues. C. Composition of two fugues: one on a given theme, the other on a new theme.

**CTP510 Counterpoint I 2 cr.**

A. 1st and 2nd species (note against note and two against one).

B. 3rd and 4th species (4 notes against one and syncopations).

C. 5th species (Florid Counterpoint).

**CYB545 Cyber Security Ethics and Law 1 cr.**

This course will examine the ethics and current laws of cyber security technologies, in terms of the often competing priorities of governments, corporations and the citizen. Topics include ethics, relevant laws, regulations, policies, standards, psychology, and hacker culture. The course will include a set of ethical principles set down internationally, in terms of fundamental rights (e.g. privacy and protection of personal data), which applies to the cyber domain, just as it applies to the physical domain.

**CYB550 Software Engineering 3 cr.**

This course is the presentation of the software engineering principles, methodologies and metrics. The topics of software engineering process and quality are presented in an integrative approach, stressing software improvements through measurements of software products and processes. The Unified Modeling Language (UML) is used throughout the course. Topics are: Software development process, domain analysis, object oriented programming, software reuse, client-server framework, design patterns, user interfaces, dynamic modeling, software architecture, software testing, software quality, risk analysis and cost estimation.

**CYB555 Advanced Database Systems 3 cr.**

The objective of this course is to study the advanced paradigms of database management systems. The content of this course consists of four main parts: The first part introduces advanced concepts of DBMS such as query optimization, concurrency control and recovery. The second part presents the distributed DBMS. It details the architecture of these systems in order to identify their different types such as client/server DBMS, distributed DBMS, federated DBMS and multi-DBMS. It finally focuses on the fragmentation and data allocation in distributed databases. The third part presents the analytical databases, specifically data warehouses. It explains the difference between the online analytical processing (OLAP) and online transactional processing (OLTP), the ETL process (extraction, transformation and loading) of these warehouses and their logical and physical modeling. The fourth part introduces database Security: Database encryption, Network security, Site authentication (3rd party Agency, Public/private key,...), User authentication, Authorization, Access control and application security( SQL Injection, Invalidated input, Password in Script...).

**CYB560 Cryptography and Steganography 3 cr.**

The objectives of this course are to provide cryptographic and information security topics and algorithms, such as symmetric key and public key encryptions, block and stream ciphers, message authentication, program and OS security as well as network and Web security.

**CYB565 Distributed Database Systems and Security 3 cr.**

This course provides an in-depth discussion of the concepts and design principles used in distributed database systems and the related security concern. It covers the architectural foundations of distributed database management systems topics as well as the application and the system level topics. Application level topics include distributed database design models in addition to the fragmentation, replication, and allocation techniques as well as

security. System level topics include query processing, query optimization algorithms, transaction management, reliability protocols, concurrency control, type of failures and recovery in distributed database systems.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                             |              |

| <b>CYB570</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Network Management and Security</b>                      | <b>3 cr.</b> |
| The purpose of this course is to introduce the principles of security in fixed and mobile networks. The course starts with an introduction to information security concepts, security services and security mechanisms. In the second part, we discuss the concepts of symmetric and asymmetric cryptography, the hash function and the signature and key sharing procedures and we apply these concepts to secure the data communication using the SSL and the IPSec protocols. In the third part, we discuss security in wireless networks, intrusions and filtering mechanisms through the use of firewalls. Finally, we discuss security management and risk management concepts. |                                                             |              |

| The objective of this course is mastering the principles and mechanisms of the security of classic operating systems (windows and Linux) and embedded systems: (Android, router).<br>To do this aim, it will also be necessary to know the memory plan of the operating systems that are most often encountered, the security model and the software architecture model (driver, service, application).<br>Students will be required to configure the security of both conventional and embedded OS.                                                                                                                                                                                  |                                                             |              |
| <b>CYB572</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Lab - Qualification Testing</b>                          | <b>1 cr.</b> |
| The vulnerability of a software is often linked to its quality. Thus, quality becomes a prerequisite for safety. This course aims to introduce and master the main concepts of quality assurance (particular attention is paid to the definition of quality assurance processes: standards, manuals and quality plans). Students will see the concepts and techniques of software review and testing. The purpose is to know how to design and implement quality assurance during a software project.                                                                                                                                                                                 |                                                             |              |
| <b>CYB573</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Lab - Cybernetic Crises Simulation</b>                   | <b>1 cr.</b> |
| This lab aims to simulate the functioning of a Security Operation Center (SOC). So, students learn how to implement the dynamic threat analysis procedures, participate in the design of an adapted and dynamic security policy, and pilot the implementation of this security policy by means of anticipation, detection and monitoring of attacks.<br>Furthermore, they also learn how to implement the response procedures adapted to the threat in accordance with the legal framework.                                                                                                                                                                                           |                                                             |              |
| <b>CYB580</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Platforms and Development Protection</b>                 | <b>3 cr.</b> |
| The objective of this course is to master the rules that make it possible to secure the software development, to master the protection of the software itself and parries in the face of attacks. At the end of this course, students will have to know how to implement and configure security solutions. For example, they will know how to implement cryptography solutions and key management.                                                                                                                                                                                                                                                                                    |                                                             |              |
| <b>CYB600</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Component Based Software Engineering</b>                 | <b>3 cr.</b> |
| Modularity is an important concept for the development and maintenance of software. After the modularity via the object paradigm, the growth of the system's complexity suggests the use another paradigm: the software component. This course aims to master the concepts, techniques and models for the development of systems by components. This is what is called component-based development. Thus, students will discover how to define and use "frameworks" and patterns for component development.                                                                                                                                                                           |                                                             |              |
| <b>CYB650</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Internship</b>                                           | <b>1 cr.</b> |
| Students need to get the approval of the head of the department about the internship. They need to describe briefly the type of work they are going to do during their internship. Instructors need to meet with students at least once every four weeks. During this progress meeting, students need to show the instructors what they did during the four-week period and what they are planning to do in the coming four weeks. By the end of the semester, students will have 15 minutes presentation.                                                                                                                                                                            |                                                             |              |

| This course pushes the students to demonstrate preparedness to start their careers as professionals in the cybersecurity field by undertaking an investigation of a research topic relevant to the profession and by appraising its practical experience. The research topic will give the students the opportunity to marshal the relevant knowledge and skills from various courses and laboratories of the program.                                                                                                                                                                                                                                                                |                                                             |              |

| The course is designed for students with a degree in chemistry (or biochemistry). It aims to introduce students to the methods that allow the acquisition of appropriate skills for the teaching of chemistry.<br>The course focuses on the Lebanese Curriculum in the intermediate cycle, considering fast outputs in order to address the fundamental parts of the third cycle of basic and secondary education, to ensure harmony and continuity between different parts of the chemistry program.                                                                                                                                                                                 |                                                             |              |

| The course focuses on Lebanese Curriculum at the secondary level, emphasizing the use of educational resources: the strategies, methods, educational activities (planning, testing, and evaluation) and choice of teaching materials. Upon completion of the course, the student will be able to adapt to the methods and theories of teaching and model, induce, deduce, abstract, apply and impart knowledge in chemistry.                                                                                                                                                                                                                                                          |                                                             |              |

| This course gives insight into macroeconomics, portraying the economy as a whole. It is by developing an understanding of fundamental economic terminology, concepts and principles that we are able to interpret economic changes and their impact on a country's situation.                                                                                                                                                                                                                                                                                                                                                                                                         |                                                             |              |

| The course is an exploration of home-school relations. It focuses on developing an understanding of traditional and non-traditional families, structural and life style variations and parenting in diverse cultures and at-risk families. Implications from this understanding will guide the development of a parent involvement plan which will include effective ways to communicate with parents, discussions with parents, and how to plan parent meetings and home visits. Special attention will be given to cultural and family situations, which affect young children, such as divorce, child abuse and neglect, illness or death of family members and life in a violent society.                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                |              |

| This course introduces students to theories and research concerning teaching and learning, and helps them apply theory in the school classroom. Students have the opportunity to view films and videos related to education, to explore children's literature, and to participate in role-playing, simulations, and peer teaching. Discussion of the following are included: theories of learning; learning styles; motivation; research on effective teaching and effective schools; assessment and evaluation techniques; how to interpret test scores; and how to explain them to parents. Fifteen hours of field experience will be included.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                |              |
| <b>EDU212</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Foundations of Education</b>                | <b>3 cr.</b> |
| This course combines a broad survey of the social, historical, and philosophical foundations of education with in-depth study of selected areas pertinent to education; such as, structures and governance of schools, professionalism, teacher effectiveness, and curriculum models. An Issues Approach is emphasized to develop a more realistic view of the teaching profession and to foster a better understanding of the major debates in education.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                |              |
| <b>EDU215</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Techniques of Expression</b>                | <b>3 cr.</b> |
| This course aims to implement essential techniques to improve the oral and written expression of students. At the level of oral expression, it proposes strategies for successful transmission of a verbal message by putting the emphasis on the words and the framework of the communication (body language, voice, intonation, etc.). At the level of writing, it analyzes and decodes all the documents through an effective reading. We shall consider processing a wide range of techniques for the development of the means and forms of written communication (letter, resume, transcript, interview, static and moving image).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                |              |
| <b>EDU304</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Theories of Early Childhood Education</b>   | <b>3 cr.</b> |
| This course offers a theoretical comparative study of the history, theory, goals, programs, approaches and related research underlying early childhood. Students will examine how theory influences practice in a variety of early childhood education models, including the Bank Street model, Headstart, open education, Montessori schools, behavioral analysis, Piagetian, Vygotskian, and Reggio Emilia approaches.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                |              |
| <b>EDU305</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Classroom Management</b>                    | <b>3 cr.</b> |
| This course is an opportunity to analyze what happens in the classroom and guide future teachers to the development of the first elements of a class management model. It aims to familiarize the students with all the elements of planning, organization and supervision in the conduct of the class, which can prevent discipline problems in the classroom and to create an atmosphere and environment conducive to learning (how to motivate, encourage curiosity, stimulate; how to function in daily life or adapt its operation through a variety of group dynamics to increase the maximum participation of students, autonomy and commitment to work, school). In another more relational aspect, this course aims to develop the competence to manage the relationships between actors in a class group, while respecting each individual in the group, to regulate conflict and establish a consistent operation attuned to all learning in the classroom. For this, an understanding of the behavior of difficult students and an identification of communication strategies with these students is of importance. |                                                |              |
| <b>EDU309</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Technology in Early Childhood Education</b> | <b>3 cr.</b> |
| This course offers an overview of current technological trends that can be used to assist in classroom instruction. The course examines technology's relationship to educational theory and how technology is becoming a part of current reforms in educational practice, and how a foundation in technological skills is critical to becoming an effective teacher. Students will explore and apply a wide range of technology currently used in education. Emphasis will be given to the examination of the use of recent technologies, computers and the Internet, and their application in Kindergarten. Ways to incorporate multimedia production for educators in the classroom will be explored. Traditional audio-visual aides will be explored. Students are expected to plan lessons utilizing technologies.                                                                                                                                                                                                                                                                                                          |                                                |              |
| <b>EDU310</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Learning Theories</b>                       | <b>3 cr.</b> |
| This course is given with the purpose of developing a classification of large trends found in contemporary theories of education, starting from a descriptive and critical study of the theories (academic, social, psycho-cognitive, technological and socio-cognitive) to come up with strategies serving as contextual references to the learning process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                |              |

| This course focuses on the main axes of the philosophy of education, which is a reflection concerning education as real human development as it was designed by the great masters - Greek thinkers. Three axes are the backbone of the course. The first axis is that of Greek education and Greek philosophy-Socrates, Plato, Aristotle. Special attention will be devoted to Seneca. The second axis focuses on education at the time of the Renaissance; 15th century and the end of the 16th century; Montaigne and Pascal. The third axis focuses on education during the century of enlightenment - Rousseau and Kant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                |              |
| <b>EDU315</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Early Childhood Curriculum: Science</b>     | <b>3 cr.</b> |
| This course provides students with knowledge of introducing sequential science concepts for the appropriate stages of cognitive development of young children and offers experience in developing the content, methods, and materials for directing children in science activities. Emphasis will be placed on how science can be integrated throughout the day school curriculum and become a valued functional tool.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                |              |
| <b>EDU316</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Early Childhood Curriculum: Mathematics</b> | <b>3 cr.</b> |
| The student will develop concept-oriented strategies in math with a primary emphasis is on thinking, reasoning and understanding and developing the ability to investigate how and why things happen in math in young children. The course focuses on developmentally appropriate learning activities using materials to cultivate logical thinking skills in children. The kinds of activities to be included in the preschool curriculum are also studied.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                |              |
| <b>EDU318</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Issues in Syntax</b>                        | <b>3 cr.</b> |
| This course aims to develop in the students an alternative approach of a very different French syntax than that learned during their school years. It proposes to go beyond traditional grammar, reaching towards a more rational use of the language. Each grammatical concept starts from the observation of linguistic facts present in a brief text. The observation is guided and the questions lead students to implement previously acquired knowledge, upon which will be anchored new knowledge.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                |              |
| <b>EDU322</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Phonetics/Phonology</b>                     | <b>3 cr.</b> |
| This course will develop diction competencies of future teachers. Students will first be asked to distinguish between phonetics and phonology. They will then learn the International Phonetic Alphabet; knowledge that will give them access to all the features of the phonetics of the French language. All the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                |              |

rules of pronunciation and diction will be subsequently addressed (pronunciation of sounds, letters, accents, links, intonation) to finally reach a correct and expressive reading of a poetic corpus - narrative or theatrical. All theoretical information will be immediately followed by practical exercises that will be based on the very practice of students. These, through listening exercises and diction, will be asked to identify their shortcomings and those of others, to explain and to address them gradually.

**EDU323 English Phonology 3 cr.**

This course is designed as an introduction to current phonological theory, with application to descriptions of the phonological systems of English and Arabic. Regular course work includes: phonetic and phonological systems; contrastive analysis; phonemes and allophones; types of transcription; vowel and consonant system: spelling and pronunciation, metrical and prosodic theories. Instruction will focus on problem sounds for Arab learners studying English so that they will be able to recognize and produce consonants, vowels, stress and intonation of the English language correctly. Students will have the opportunity to practice identifying and producing speech sounds.

**EDU325 Digital Resources for School Education 3 cr.**

This course provides a concrete discovery of digital resources for education namely typology of digital resources for education, online research methodology, and the analysis of digital resources for education and problems of their pedagogical uses. Today the modes of course preparation at all levels of education and training are based increasingly on consultation and integration of educational resources found online. Training institutions are facing the emergence of teaching practices of communities, personal sites of all kinds and commercial offers, resources where the proliferation does not facilitate the teacher's task. This course's main purpose is to present the diversity of these resources, access modes to the latter, but also to give future teachers the key to analyze, in order to help them integrate these into their teaching practices.

**EDU330 General Didactics 3 cr.**

This course covers the basic concepts of general didactics and pedagogical principles to be understood in the ideas of curriculum, curriculum development and planning of learning situations. It also provides the basic data essential for the development of didactic situations, the analysis of the links between the elements of the educational triangle and principles essential to make the teaching contract successful in various school settings. The course allows the student to apply teaching from the competency-based approach and the problem situation, and specify the use of educational objectives; their classification and formulation, as well as their integration into different learning situations.

**EDU336 Teaching Language Art For Children 3 cr.**

This course presents techniques and methods for encouraging the development of language and perception skills in young children, and stresses improvement of vocabulary, speech, and methods of stimulating discussion. Surveying children's literature, examining elements of quality storytelling and story reading, and stressing the use of audio-visual materials are all important elements of this course. Through observations and reading students will focus on how humans acquire and develop language. Problems related to bilingualism, language development, and choice of appropriate program activities and materials for young children are emphasized.

**EDU339 Methods and Materials in Early Education 3 cr.**

This course is designed to acquaint students with principles of learning and classroom procedures for optimum experiences for young children. It focuses on developmentally appropriate methods and material for use in kindergarten educational settings. The emphasis is on kindergarten children aged three years and above. Topics include classroom arrangement, scheduling, selection of materials, curriculum planning using themes and integrated units.

**EDU345 Applied Linguistics to Teaching French 3 cr.**

The course focuses on didactics/linguistics relationships, on the application of linguistic theories in the teaching and learning of second languages and on linguistic intervention fields in the class of language. The topics covered address fundamental concepts related to general linguistics, lexical semantics, morphology, syntax and the use of the statements in oral and written texts. In addition, this course provides criteria to be considered in the teaching of a second language and the analysis of errors made by students during their learning, to remedy and even prevent them.

**EDU400 The Teacher's Ethical Skills 3 cr.**

After acquiring teaching skills, this course will focus on the teacher's ethical skills in order to give meaning to education by working to certain principles. The course, aimed at undergraduate students of education, considers the ethical element of the teacher's mission. It will allow an awareness of the challenges and ethical issues facing teachers in their profession and will engage them in ethical reflection on topics posed in everyday action.

**EDU414 Survey of Children's Literature 3 cr.**

This introductory course is designed to provide an overview of trade books appropriate for children from preschool through to age six. In this course students survey the broad range of literature written for children. Emphasis is placed on selecting genres (prose and poetry) appropriate to the developmental stage of children, gaining familiarity with multicultural literature, understanding the distinguishing characteristics of different genres, developing visual literacy with respect to picture books, evaluating the quality of literature for children, and how child's individual development affects interest and use of literature. Investigating internet and traditional library resources support student' learning course content.

**EDU416 Teaching Social Studies, Movement and Theater 3 cr.**

This course introduces students to creative and cultural expression through the theater. Particular attention is paid to the volume of theatrical education as a means eventually helping young children develop language, outperform their vocabulary, and adjust language skills and gestures. Students develop, during their learning, a repertoire of activities and approaches emphasizing the flexibility of maintenance, gesture, movement and dynamism, etc.

**EDU419 Specialized Didactics in Mathematics I 3 cr.**

This course will enable students to develop professional skills to teach math according to the methods of active teaching, to introduce young students to transform the basic math skills into intellectual instruments, which will enable them to build solid knowledge and develop critical thinking and synthesis.

**EDU420 Specialized Didactics of Mathematics II 3 cr.**

**Pre-requisites** EDU419

This course seeks to deepen didactic concepts such as differentiated instruction, interdisciplinarity, project based pedagogy, etc. It aims to develop in students the skills, which will enable them to design, build and manage learning situations; thereby ensuring the intellectual, psychic, moral, and social development of students.

**EDU421 Young Adults' and Children's Literature 3 cr.**

The course of child and youth literature offers students an opportunity to comprehend the literature addressed to young people according to two approaches. In the first approach, which is informative and analytical, the emphasis will be on the wide variety of genres proposed for youth, on the analysis of its components and the different procedures of scripture utilized. A second practical approach offers students different modes and ways to exploit these works, with young people in BCD and reading workshops, in order to promote the pleasure of reading and writing.

**EDU423 Evaluation in Education 3 cr.**

The content of this course will develop the conceptual notions in evaluation in light of the various theories. It initiates the future teachers into the process of evaluation, exploring taxonomy, docimological rules, forms and functions of evaluation and terms of interpretation. It prepares students for mastering the techniques of evaluation, notably the evaluation grids, addressing the objects of measurement that structure the education system (namely, the operating targets, or how to assess a teacher's skills), and also the textbook or the school.

**EDU424 Teaching Social Studies, Movement and Theatre 3 cr.**

This course emphasizes the richness of cultural and creative expression through social studies, creative art and theatre. Special attention will be given to culture and its impact on language development. Theory, curriculum, methods and materials for teaching social studies and theatre are studied in order to provide experiences in directing children in these areas. Students will develop a repertoire of activities and approaches, emphasizing the child's participation.

**EDU425 ICT and Professional Teacher Development 3 cr.**

The course introduces the mastery of observation techniques, natural and manipulated, and necessary for the comprehension of the meaning of the practices of users of ICT in the teaching world. At all levels of training, the use of technology for the teacher provokes pedagogical upheavals that question the postures of the actors in the educational system. Professional postures are facing, on the one hand, the new "cultural" uses of "digital nature"; on the other hand, the tools and programs developed by the training systems. If the myth of the suppression of teachers is no longer appropriate, what are the new competencies of teachers? What is the new knowledge? What are the new professions? This course will put these issues in perspective. It will address certification issues as well as the study of collaborative online practices and uses of digital work environments.

**EDU427 Theories of Education Play 3 cr.**

This course addresses creativity and play in kindergarten and studies the functions of play in the development and education of the young child (from birth through to age six). Included in the course are the following: research on the stages and the levels of play; methods for supporting and fostering play and creativity for parents, educators and caregivers; and strategies for assessing creativity and play. The developmental phases and ways of supporting and fostering play and using play for understanding children will be surveyed and discussed. Fifteen hours of classroom observation/participation will be required.

**EDU428 Specialized Didactics I (SCO) 3 cr.**

This course is designed for students holding a degree in Social Sciences or in Sociology. It aims at introducing students, preparing for their teaching degree (Teaching Diploma), to methods that allow them to acquire skills specific to teaching economic and sociological sciences.

The course focuses on the Lebanese curriculum in high school.

The teaching methods are based on the close connection between theoretical instruction and its practical implementation (the socialization process, social and economic changes, structural and conjectural policies, etc.)

**EDU429 Didactics of Life and Earth Science 3 cr.**

This course mainly addresses the epistemology that responds to questions relating to the means capable of fostering the transmission and appropriation of scientific knowledge. It includes techniques of science education, in order to know the specification of experiments or science book, which became the primary teaching tool accompanying learners during schooling. The course deals with the process of teaching and learning of science by "situation-problem".

**EDU431 Specialized Didactics I (PH) 3 cr.**

This course is designed for students holding a Bachelor's in philosophy. It intends to introduce students preparing for a Teaching Diploma (Diplôme d'Enseignement) to methods that allow them to acquire skills specific to the teaching of philosophy.

The course focuses on the Lebanese curriculum (and European) in high schools.

The teaching methods are based on the close connection between theoretical instruction and its practical implementation (read, operate, and analyze a philosophical reflection, a text or a thought, etc.)

**EDU434 French Language Specialized Didactics I 3 cr.**

Students preparing a degree in Educational Sciences - Basic Education, will be called upon to address issues related to specialized didactics of the French language and prepare practical sheets for classroom application. The areas covered will be those of understanding and speaking and those of reading literacy, covering all classroom activities with language lessons (listening, comprehension and oral expression) and reading (text and iconographic documents). A methodology offering an inductive approach will be applied in the preparation of lessons and assessment criteria will be proposed in respect of each activity.

**EDU435 Workshop in Early Education 3 cr.**

Intensive practical study in a selected area of early education.

**EDU440 Pedagogical Analysis of Texts 3 cr.**

The course aims, as a first step, to appropriate the fundamental data for the processing and analysis of educational texts, with an emphasis on the different levels of study and representative patterns. The pedagogical analysis is based on a linguistic approach and the study of the context in which the statements are produced. Secondly the course covers the fundamental data that highlight the characteristics of different types and kinds of texts and the elements essential for the structuring of ideas around various situations of writing, in order to produce a variety of texts.

**EDU444 Specialized Didactics of Life and Earth Sciences I 3 cr.**

This course aims to develop, in students, professional skills needed to teach science in a competency-based approach and an investigative approach. In this course, students will also be prepared to adopt in class the methods of active learning for interactive teaching.

**EDU445 Specialized Didactics of Life and Earth Sciences II 3 cr.**

**Pre-requisites**

EDU444

This course seeks to deepen didactic concepts such as differentiated instruction, interdisciplinarity, project based pedagogy, etc. It aims to develop in students the skills to enable them to design, build and manage learning situations, ensuring the intellectual, psychic, moral, and social development of students.

**EDU447 Evaluation and Assessment in Early Education 3 cr.**

This course places an emphasis on the educator's role as observer and evaluator of status and change in school behavior and achievement. It acquaints the student with a variety of formal and informal techniques assessment used for observing, recording, and analyzing the development and the perceptual, motor, cognitive, and social-affective performance of children. Assessment of children will be analyzed by looking at a variety of assessment activities that can be done with children. A range of methods and techniques from direct observation to standardized testing will be surveyed.

**EDU454 French Language Specialized Didactics II 3 cr.**

**Pre-requisites**

EDU434

This course will present a working approach relating to areas of written expression and knowledge of the language. Students preparing a degree in Educational Sciences -Primary school level, will be required to deepen their knowledge of theoretical concepts in the specialized didactics of the French language, particularly in literacy, and to acquire work processes ready to prepare fact sheets relating to preparing lessons in targeted areas. The work done by students in this course will aim to realize the application of theoretical and practical knowledge in the school context, through an internship conducted in schools.

**EDU464 French Language Didactics 3 cr.**

In this course specific educational issues relating to the teaching of the French language and in French language in cycles I and II primary are addressed. It deepens levels of analysis of the French language within the school context, and the specifics of the areas of teaching of this language plus the knowledge relating to the methods of language teaching. Didactic situations will be analyzed with reference to content and methodological opinions proposed by the Lebanese curriculum.

**EDU469 Video / Serious Games in Schools 3 cr.**

The course presents video games created at the forefront of technology, but which leave a serious impact on the concept of leisure and Ludo science. The course objective is to demonstrate the educational interest of an activity called "video game creation at school" to make students understand the potentialities and the difficulties associated with the use of video games for learning. Students learn to develop competencies of analysis and design of pedagogical video games to define learning objectives and write synopses of audio visual materials to achieve the desired objectives. The term "Serious Games" is used to refer to games for utility purposes and within a formative goal. The time component to the "Serious Games" video focuses on online games, on the computer, or on a gaming console, that have a combined educational objective in a ludic operation. Beyond the theoretical approach, the course allows students to create games, from scratch, through relatively simple software.

**EDU470A Internship: Classroom Observation and Practice 6 cr.**

This training course is for third year students who aspire to teach in primary grades P1 and P2. It allows them to have access to classes, to see closely the didactic practices and better understand their personal characteristics, in order to get ready for professional life. The purposes referred to are: becoming familiar with the concrete realities of school education; addressing the teaching career with ease; and becoming integrated within the school system.

**EDU480 Pedagogic Analysis and Integration of Educational Mediatized Materials 3 cr.**

In this course, students learn to analyze different educational mediatized documents. Specifically, they will seek to incorporate them in teaching situations in the classroom. Starting from newspapers, radio and television series, this course will introduce the main forms of media (news, documentaries, editorial children's shows, commercials, ads ...). It will also aim to instill in students the skills necessary for the analysis and the implementation of mediatized educational tools.

**EDU485 Specialized Evaluation in Education 3 cr.**

This course covers essential data for the evaluation of learning and classroom assessment management. Key concepts falling within this domain will be presented, analyzed and discussed, in order to develop, within each discipline, the concept of evaluation that is appropriate. A thorough treatment of the tests will be the subject of an analysis at the level of certain ideas related to tests: the validity of tests and their feasibility, analysis of the types of items, and the way to present them in trials. The way to manage classroom assessment will be addressed through the development of instruments and assessment tools, in accordance with the objectives of the curricula. This course includes various techniques for the preparation and correction of tests, the establishment of scales and scoring. The concept of competence is addressed in an evaluative context, related to formative assessment and in relation with the learning objectives, in order to form an assessment at the end of the educational sequences.

**EDU502 Training Ethics 1 cr.**

The course firstly introduces the students to the basic concepts of philosophical ethics (the righteous, the good, moral conscience, fundamentalism, coherence, relativism), and the main contemporary doctrines. Secondly, the course analyzes the major ethical problems posed by educational practice and the educational institution, such as social justice, education facing moral pluralism, education for citizenship, respect for others, human rights, ethics of education practitioners, training and professional integration. Upon completion of the course the students will be able to analyze the ethical issues related to educational practice and design of educational systems and develop a normative argument on these issues.

**EDU503 Educational Legislation in Lebanon 2 cr.**

The course covers the fundamental texts of the Lebanese Constitution related to education, school administration, control modes, the school part, compulsory education, with multiple decrees and texts simultaneously organizing teaching in pre-school, basic education, secondary and university, and management of education. Upon completion of the course the students will have acquired skills in the relevant laws, decrees, diplomas and educational systems and become familiar with the Official Bulletin of Education and the Official Journal, the Education Code and any appropriate form of structure.

**EDU504 Introduction to the Administration of Education 2 cr.**

The course is a form of general introduction to educational management function; perceived primarily as the establishment and the efficient organization of all the resources necessary to achieve the objectives of a private or public organization, as regards production or service. It prepares students for entry level as a School Manager. The course emphasizes an awareness of concepts, conceptual and operational models, as well as useful tools for a better understanding of this field of practice and reading of the phenomena that underlie it. It aims to promote the educational management, functions and roles implemented by School Managers. Upon completion of the course, the students will be familiar with the language related to education management.

**EDU511 Financial Management of Educational Institutions 2 cr.**

This course is designed to introduce those who are entitled to engage in leadership positions in educational institutions - in such a case the holders of Master II in Educational Sciences - to financial management of their schools, to improve profitability, and to control the risk; especially as by virtue of their positions, they assume significant financial responsibilities (scheduling etc.). For this purpose the course will train them to: prepare accounts or basic financial documents (budget, income statement and balance sheet) specific to educational institutions; manage the cash of their establishment through the projection of its financial flows (cash flow, expenses and predictable monthly income); know how to choose the most profitable investment projects for their educational institution, through the financial evaluation of the latter; and regularly assess the financial management of their institution, through a series of ratios, in order to correct deficiencies in time

**EDU513 Linguistics Applied to Teaching 3 cr.**

The content of this course will focus on the implementation of linguistic theories in the teaching and learning of the French language and the fields of linguistic intervention in the language class. It will also examine how the current psycholinguistic theories help to better understand the process of acquisition of the second language and the factors that facilitate or make the acquisition difficult. It will likewise cover the problems of teaching French (the phenomenon of interference between Arabic and French, analysis of typical errors, bilingual education, and sociolinguistic fallout).

**EDU515 Theories of Information and Communication 2 cr.**

Knowledge is an entirety of intelligible information. Information is the primary background for knowledge. Communication is the information in motion or the approaches of information transmission from a source to the user. Since the theory of Shannon EC, which describes the most basic aspects of communication systems, information theory was made more precise, and has now become indispensable in the conception of any communication system, in the broadest sense of the term. The communicational contribution of the approaches of behaviorism, media, functionalism, polo altism, the Frankfurt School, McLuhanism, will be addressed in a historical and sociological perspective. The delivery of a course on the subject is done precisely to set the limits of the twentieth century theories, and grapple with the digital age and what ensues (nanotechnology, cybernetics, and genetics), because humanity is confronted with new questions.

**EDU517 Mathematics Didactics 3 cr.**

The course introduces students to didactic approaches which, following various experiments, put at their disposal effective tools to address the mathematical concepts and practices of class within this discipline. Mathematical logic and, thereafter, appropriate language remain a concern accompanying the various phases of this course. The course enables students to be able to reason according to the criteria of formal logic, to analyze, assess and make a judgment based on a synthesis at all levels of the curriculum.

**EDU519 Didactics Issues 3 cr.**

This course implements, in didactic situations, appropriate techniques to deepen the teaching practice. These techniques fall within exam preparation, correction, fun activities, organization and class preparation. In conjunction, this course presents the techniques essential to lead the workshop in the job and in selected situations, by putting forward related educational solutions. This course also presents appropriate teaching methods to be adopted in the classroom, according to the didactic situations as they arise and at the level of the learners.

**EDU524 The Knowledge Society, Sociological and Philosophical Approaches 2 cr.**

The digital revolution has enabled the emergence of new forms of thought, sociality, culture and policy involving new forms of pedagogical and educational projects that highlight the need to carry out a reflection on a series of questions. The course provides information on the theoretical and methodological approaches in the sociology of uses, to analyze the types of reactions and social and cultural appropriation of ICT and media (rejection, resistance, adoption, embezzlement, etc.).

The course also deals with philosophical approaches that question today's society, explores important issues concerned with theoretical debates and empirical case studies on issues specific to sources of knowledge, changes, namely digital communities, neighborhoods and digital identities, globalization of production and consumption of information, the emergence of a knowledge-based society in perpetual change, instability of knowledge and, at the same time, the massive growth of knowledge and consequences at the level of the individual and the community. The course also tries to think about education articulated in debates, issues and positions, that the sociophilosophical approach does not fail to deploy. The course interrogates the various structuring themes of the educational issue, whether it be the desire, experience, language, modernity, nature and freedom, critical thinking, person, knowledge, meaning, values, etc.

**EDU527 Thematic Seminar in Educational Technology 2 cr.**

As part of this course, a training scheme is offered to students. Students undergoing training may follow a research seminar that appeals to international stakeholders. In a project teaching logic, students will draw upon computerized tools at their disposal, and will design a situation of teaching/learning from the perspective of research and development. For this purpose experimental facilities (laboratory ICTE) will be available on their website. Students will also examine concrete examples in the field of current research in ICTE, with emphasis on methodology (Investigational Device designs, data analysis, etc.). Presentations will be held to deepen a given theme; each representing a particular disciplinary or methodological approach. Students will develop and implement a project of information and research communication. Students will focus on technological activities that can lead to gains in learning and / or lead to change in teaching and learning.

**EDU533 Tools for ICTE and Distance Education 2 cr.**

This course introduces learners to a techno-pedagogical approach aimed at the material management of the ICTE (computer equipment, software configuration of machines), software tools and their uses in education, types of environments for the educator, and educational software packages, synchronous and asynchronous learning platforms, etc.

**EDU534 Templates, Web 2 Tools and Mobile Learning 2 cr.**

This course is complementary to the course "Tools for ICTE and Distance Education". It focuses on the learning and the implementation of the main applications of the Internet in education. The course is based initially on a presentation of research on the uses of educational resources available on the World Wide Web, wikis, blogs, RSS feeds, but also issues intrinsically linked to the development of tools for Web 2.0 or Mobile Learning such as legal problems (copyright, traces, etc.), technological constraints, the semantic web and its applications to research. In the second phase, students will have implemented, through simulations, the different elements presented.

**EDU538 Specialized Didactics II (PH) 3 cr.**

A follow on form the course of "Specialized didactics I", this course will teach students to prepare, give and assess philosophy lessons, both in terms of content and teaching modalities. In terms of content, the course deals with principles that should guide the preparation of lessons in philosophy, in particular, the importance of philosophical concepts, arguments, authors and the history of thought. At the methodological level, students will, through practical work, prepare lessons on philosophy taking into consideration the particularities of the teaching / learning process and the specificity of content in philosophy. The practice will focus on adequate assessment methods for critical judgments and study of philosophical texts.

**EDU540 Strategic Planning and Curriculum design in Education 3 cr.**

The first part of the course focuses on the Strategic Planning in Education:

1-Planning is intended as a work of reflection of organization that addresses the following issues:

- Understanding the value and role of education, defining strategies for educational policy;
- Determining priorities, expectations, and needs of the educational institution;
- Perceiving education as "an on-going share-of-life" and adopting the concept of "consultation" in the workplace to foster closer links between the worlds of education and the workplace.

A proper understanding of the course will develop educational planning and analyze their practices while identifying the fundamental principles and examining the challenges displayed by the planning of complex operations through addressing the social, political and economic issues.

2-The second part of the course focuses on the theories of explicit and implicit programs that will be the subjects of this part. This study will cover the basics of the design, development, management and implementation of programs. An analysis of the theoretical and practical aspects of the programs' evolution requires consideration at several levels: the role of objectives in curriculum planning, the analysis of needs, building contents, stages of implementation of these programs, revision of evaluation models and the theoretical aspects structuring the different disciplines. This study will be accompanied by the discussion of issues that arise during the implementation of renovated programs and successive transformations carried on the educational programs throughout their implementation.

**EDU541 Comparative Education 3 cr.**

In the first part, the content of this course will focus on the comparison between the different educational systems of the world (French, American, Australian, Chinese, Japanese, etc.). Students will be prepared to understand the basic concepts related to this area and to analyze, through the stages of its evolution, the factors that led to its emergence and expansion. They will, likewise, be initiated to understand the current trends in comparative research through several thematic studies, with the aim of establishing criteria for comparison. In the second part, the course covers the comparison between the different educational styles and systems in Arab countries, in order to identify divergence and convergence. This viewpoint will place Lebanese students in relation to the regional educational contexts and give them the opportunity to compare them with the Lebanese educational context.

**EDU548** **Specialized Didactics II (SCO)** **3 cr.**

Starting from a didactic problematic, this course focuses on the central issues that structure the field of social and economic sciences: that of the epistemology of relevant knowledge and fundamental sociological and economic concepts.

This course intends to deepen students' theoretical and didactic knowledge in sociology and economics, updating them according to the contemporary trends and procedures of teaching methods.

**EDU561** **Internship/Workshop/Laboratory** **3 cr.**

As part of their teaching practice student will attend classes to observe educational practices in a school context, and gather material for their descriptive and analytical report. Students must demonstrate how they can integrate technological tools and apply new techniques used in the world of ICT for educational purposes.

**EDU601** **Educational Supervision and Coordination** **3 cr.**

This course will focus on the supervision and pedagogical coordination produced from the educational and administrative needs of educational institutions and from the objectives targeted by the managers of these institutions, the directors, executive board and teaching staff. The discussed sub themes will also focus on the competencies and the different functions of the coordinator as a trainer, evaluator, manager of education and a member of the teaching staff; as well as on its relations with those responsible for the cycle and the director of school. Techniques and working methods articulating theory and practice will be analyzed at these levels, to focus on interpersonal relationships in the school and the management of learning.

**EDU610** **Evaluation of Establishment and Success** **2 cr.**

The course familiarizes students of educational management with new concepts in the evaluation of institutions: accreditation, quality assurance, qualification results, self-assessment and external evaluation. It presents the conditions that guarantee that quality, seen as a tool for improvement, has been achieved; hence the necessity of establishing adequate evaluation criteria upon which to rely, in order to certify that the institution has reached the required level of quality and performance. This course focuses on a transparent self-assessment and ethical approach, which calls the institution to challenge the results of its work and its various functions. The course also analyzes the needs that arise from these types, such as training of administrative staff, training of teachers and interpersonal relationships, with the aim of ensuring and maintaining in balance the continuous improvement process of institutions.

**EDU630** **Management of Change in Education** **2 cr.**

The course develops education manager skills, which promote and support processes of transformation of professional practice in different educational contexts; also to be able to make appropriate and informed choices of change strategies in education. The course examines the implications of the role of agents in educational change in a context of complex problems, and, furthermore, analyzes the consequences of accelerated change in school management today and tomorrow.

**EDU660** **Thematic Seminar in Education Management** **2 cr.**

The seminar is an open space to all specific issues in management in education. It may include: 1-Sociological analysis of organizations: a) implicit theories of organizations, b) the elements of an organization (structures, contingency, goals, systems, systems of actors, shapes and organizational strengths), c) the characteristics of educational organizations: bureaucratic logic, professional, adhocratic, loosely coupled system, etc.; 2- Evaluation and piloting of educational systems: this is the implementation of reforms, implementation of innovation, management methods and evaluation of educational and training institutions; 3- Interpersonal communication and group management: this is an awareness of attitudes and preferred modes of communication in interpersonal and group levels. The seminar includes training in the analysis of the main phenomena linked to interpersonal communication in a group management context and development of intervention approaches in groups; 4- The management of diversity in schools. At this point, the manager will learn to identify and analyze the various issues related to the diversity of clientele in the school environment. Studies and analyses of models fostering the integration of the immigrated youth (in Western countries) or those who have adverse living conditions, due to wars that are changing the demography of the Middle East. The focus will be on otherness; 5- Qualitative and quantitative information necessary at all stages of educational planning. This seminar will enable students to acquire and apply the knowledge and techniques needed to build and use information systems for planning and management of education. N.B. Other topics could also serve as an object of the thematic seminar.

**EDU661** **Internship** **2 cr.**

The course is intended for every student who aspires to the position of education manager. It is an implementation of the knowledge and skills acquired in education management, taking into account the multidimensional reality of primary and secondary schools. The course also aims to foster a process of reflexive analysis on professional practice as well as to update profiles for the staff of the education manager.

**EDU678** **Innovative Pedagogical Issues** **3 cr.**

Education and Modernity

The objective of this seminar will focus on the study of the impact of social, technological, economic and media-dominated changes on education in the era of modernity. Several issues concerning the challenges which education is constantly facing will arise, such as the global or social crises threatening the development of education and affecting the positive representations, which are designing new pedagogies. A redefinition of the relationship between school and society will be vital and a review of new educational realities in the computer age is essential.

**EDU680** **From Theory to Practice in Education** **3 cr.**

In light of learning theories, methods and techniques already encountered throughout their academic career, students will make a reflexive analysis on their educational intervention and study situations and cases relating to classes of primary cycles 1 and 2. They will, in turn, propose educational practices concerning these situations. This analysis of teaching practices focuses on implications for the school intervention and the relationship between theoretical and practical teaching. Examples are the choice of approaches, methods and means of teaching used according to the subject being taught, student characteristics, classroom management, and appropriate instrumentation.

**EHI470** **Specialized Didactics I** **3 cr.**

The course is designed for students who hold a degree in History. It aims at introducing students in TD to methods that allow the acquisition of skills required for the teaching of history. The course focuses on the Lebanese Curriculum in the secondary cycle. The teaching methods are done in close connection between theoretical teaching in teaching practice by having the ability to read a map, explain an engraving, examine and use a historical text, analyze events and transmit historical knowledge through the many examples that reflect a situation or event.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                  |              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------|--------------|
| <b>EHI471</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Specialized Didactics II</b>                  | <b>3 cr.</b> |
| This course reflects the history program planned by the Lebanese Curriculum. After the course, the student will know the appropriate methods and theories for teaching history and be able to analyze, deduce, construct a coherent understanding and pass it on.                                                                                                                                                                                                                                                                   |                                                  |              |

| The course is a cycle of seminars involving qualified professionals and specialists from other fields, who will explain the real needs of the market, alongside the available media means to meet these needs. This course will be examining investigative journalism, e-marketing, conceptualizing and editing online magazines, photojournalism, data journalism, leadership, information on mobiles, etc.                                                                                                                        |                                                  |              |
| <b>EJCM535</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Cyberlaw and Cyberethics</b>                  | <b>2 cr.</b> |
| This course introduces students to texts about cyberlaw. It discusses the different texts with respect to press freedom, as guarantors of individual and group freedoms. It reviews the influences affecting press liberties; elaborating upon the relationship between press independence, politics and finance. The course also examines different means to ensure respect of this freedom, as well as the professional code and ethics of journalism.                                                                            |                                                  |              |

| Students will complete an observation internship in an elementary level class and in secondary level class for six uninterrupted weeks. The internship shall cover a complete teaching unit where they document their observations in a logbook (subject to supervision by the internship supervisor appointed by the related department). At the end of the internship, students will be called to give two simulations before the internship supervisor: one in an elementary level class and another in a secondary level class. |                                                  |              |
| <b>ELL101</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>English Literature</b>                        | <b>3 cr.</b> |

The aim of this course is to introduce the basic features of major literary genres: poetry, prose, and drama. The design of the course involves the explanation and modes of analysis of the different types of each genre. Selections for the course include a novel, a short story, an essay, a play, and a number of various poetic forms. Basic elements of each genre and its sub-genres will be analyzed. This may be achieved by analyzing the basic characteristics of each form (language, figurative language, plot, setting, characterization, point of view, narrative voice, etc.).

**ELL210 Introduction to Linguistics 3 cr.**

The aim of this course is to introduce the major sub-disciplines in linguistics. Topics include the emergence of language, the sounds and sound systems of language, word structure, sentence structure, meaning, language use and variation, language history and language acquisition. The course combines theoretical and descriptive aspects of linguistic analysis as well as the application of basic tools and techniques used in the field.

**ELL222 Survey of English Literature I 3 cr.**

The course is a close examination of the early beginnings of the novel in the 18th century, culminating with the Gothic School. After introducing the different factors (social, economic, and literary) that brought about the rise of this genre, the students will be introduced to the prevalent modes/techniques as well as the main themes that concerned early novelists such as Defoe, Richardson, Fielding, Sterne, and Mary Shelley. Moreover, successful completion of the course will enable students to construct appropriate oral and written statements concerning literary, historical, cultural, and philosophical movements from the classical up to approximately the romantic era.

**ELL223 Sophomore Rhetoric 3 cr.**

The aim of this course is to enable students to read critically, evaluate what they read and formulate verbal or written opinions based on the best available evidence. It also covers methods of formal argumentation suitable for students majoring in linguistics and literature. During the course students will develop research, writing-process, and timed-writing skills. They will also use primary and secondary sources to write an effective college-level documented expository essay.

**ELL225 Poetry 2 cr.**

This course is an introduction to the major poetic movements that shaped English poetry. Starting with Plato's definition of poetry, the course traces the major developments in poetic conventions, modes and genres: Classicism, Neoclassicism, Romanticism, Victorianism, Aestheticism, Modernism (Symbolism, Impressionism, Imagism, Surrealism) and the contemporary experimental movements (Concrete, Beat, Slam). The poetry selections will be used as a vehicle to examine universal themes basic to the human condition, and to investigate these themes as they relate to life experiences. The course also teaches the skills one needs to study poetry with understanding and pleasure. During this course students will interpret, analyze, and critically evaluate representative works of these movements. Using examples from different periods, the students will be able to develop a sense of how poetic modes, genres, and forms change across different periods.

**ELL310 Survey of English Literature II 3 cr.**

**Prerequisites** ELL222

The course offers an in-depth analysis of the main characteristics (themes, characters, and techniques of the golden age of the novel: the Victorian period). It focuses on major representative works by such authors as Austen, the Bronte sisters, Eliot, and Hardy. Both the form and the content will be scrutinized in order to highlight the multifaceted nature of the Victorian era and to trace its connection to the 18th and 20th century novel. The course makes students aware of the diversity of the Victorian novel and the various social, intellectual, and religious thoughts that permeated the age.

**ELL311 Introduction to Drama 3 cr.**

The course offers both a historical survey and a literary history of the development of drama. It concentrates on critical analysis of the distinguishing features of the different genres and sub-genres in drama: tragedy, comedy, tragicomedy, morality, Elizabethan, Jacobean, comedy of manners, the well-made play, one act play, closet drama, mono-drama, superstar play, absurd play, etc. The course also introduces the practical or technical side of the theater by looking at stage conventions and artistry. The course aims at helping students gain awareness of the technicalities involved in the theater, as well as the correlation between the genres of drama and the diction, the characterization, and the stage setting. Students are expected to give presentations on their favorite form and try to write scenes based on themes, characters or forms of their choice.

**ELL313 English Morphology and Syntax 3 cr.**

The course is an in-depth study of morphology, the abstract rules/constraints governing the internal structure of words, and syntax, principles governing how words are combined to form phrases and sentences. The focus of the course will be building the students' skills in English morphological and syntactic analysis. Major attention will be given to the interaction of morphology with syntax to study the patterns and relationships of words, phrases, and clauses to form sentences and the rules by which the sentences are constructed.

**ELL315 Public Speaking 3 cr.**

**Prerequisites** ENG240

This course is designed to help students become more effective and responsible speakers and listeners. It will encourage them to communicate more openly in different settings (speeches, debates, group discussion, interviews, etc.). This course teaches students the necessary skills needed to become more articulate in verbal communication. It also highlights the importance of both encoding and decoding in the communication process.

**ELL321 History of the English Language 3 cr.**

This course offers a broad study of the development of the English language from its beginnings to the present time. The course addresses the relationship between the history of society and the history of sounds, inflection, and vocabulary of the English language. The course also surveys English grammar from the point of view of modern linguistic scholarship or transformational grammar. The course aims to help students understand how the English language should be used, rather than simply how it is used.

**ELL322 Development of English Poetry 3 cr.**

The course traces the development of English poetry in the 19th and 20th century through an in-depth study of its major figures. The focus of the course is to delineate the changes in poetic modes and sensibility, from Romanticism to Modernism, and in the literary theory which permeated the period and affected directly and indirectly the poetry of the 20th century. Along these lines, the course will take a close look at works of poets such as Blake, Wordsworth, Coleridge, Byron, Shelley, Keats, Tennyson, Browning, Arnold, the Nineties, Yeats, Eliot, Auden, and Larkin, among others.

**ELL323 Development of the English Novel 3 cr.**

**Prerequisites** ELL310

This course's aim is to offer students a close study of the development of the 20th century novel as an outcome and reaction to the 19th century novel. This course focuses on how the writers of the early 20th century abandoned the previous literary conventions and adopted new ones in their understanding of the role of the novelist. Social, psychological, moral, literary, political, and philosophical circumstances called for experimentation in

form, in narrative techniques, in characterization, and in style. The course focuses on some of the major novelists such as Hardy, Conrad, Lawrence, Forster, Woolf, and Joyce. Thus the course enables students to analyze the formalistic and thematic concerns of the novelists of the period.

**ELL324 American Literature 2 cr.**

This course offers an introduction to various forms of American literature in the 19th and 20th century. It traces the relationship between the intellectual, political and cultural background of American poetry and the novel. The course focuses on major figures such as Emerson, Poe, Whitman, Melville, Hawthorne, Hemingway, Fitzgerald, Pound, and Eliot. The course leads students to gain awareness in the multicultural nature of American literature, as well as with the specificity of the American experience.

**ELL410 Literary Criticism 3 cr.**

This course is an introduction to major trends in literary theory from Plato to the end of the 18th century, covering Classicism, Renaissance, Neo-classicism, Romanticism, Realism and Naturalism, Symbolism, and Aestheticism. The aim of this course is to enable students to practice how to use different theories, to read literature, and how to relate literary theory to the cultural, political, social, and moral backgrounds.

**ELL411 The Age of Shakespeare 3 cr.**

The course is designed to introduce students to a representative sample of Shakespeare's dramatic output. The six plays for study include two comedies, two tragedies, a history play and a romance, covering virtually the entire period during which Shakespeare was active as a playwright. The aim of the course is to provide an understanding of the historical conditions - above all the theatrical - in which Shakespeare lived and worked.

**ELL413 Special Topics in the English Language 2 cr.**

The course provides an introductory exposure to communicative variation within human sociocultural systems (such as slang, dialects, jargon, speaking in tongues, etc.), language acquisition, languages in contact, communicative performance, linguistic issues in meaning and cognition, aspects of the structure of language, and applied linguistics. The usual format for the class meetings is lecture/discussion, with some in-class exercises. This course synthesizes information on language and culture, human communication, thought and creativity, literary expression, social and historical diversity. It bridges the humanities field of linguistics and aspects of history, literature, philosophy, and the performing arts, as well as the science and social science approaches to language.

**ELL422 Comparative Literature 3 cr.**

More often than not, the stories we tell are key to understanding, and even creating, personal and communal identity. In this class we will discover, through the discussion of texts from various cultural backgrounds, the diverse ways in which narrative allows us to explore, challenge and reformulate definitions of identity. The course is designed to equip students with the tools necessary to critically analyze texts in light of other texts and to enable them to compare the rhetorical discourse and strategies implied in the texts.

**ELL425 Special Literary Themes 3 cr.**

The focus of the course is on modern drama which has been preoccupied with expressing the spirit of the modern age. A profound sense of disillusionment, fragmentation and absurdity of human experience pervades the plays of this period. The course investigates the reasons for and the dramatizations of the modern condition by studying European and American drama, illustrated by representative works of the major Irish, American and British playwrights. Although the focus of the course will be on Synge, O'Casey, Beckett, Pinter, Stoppard, O'Neill and Albee, both the precursors (Ibsen, Strindberg, Checkov, and Shaw) and the inheritors of modern drama (Hare, Storey, Mamet, Shepard, etc.) will be introduced. The course aims at helping students gain awareness in the cultural experience of modern drama, and the rendering of the theater as a private space for the playwright's alienation from the audience and from language itself. It familiarizes students with movements such as Naturalism, Symbolism, Realist, and Absurdist, and how these movements manipulate stage settings, language, and other dramatic features.

**ELL470 Specialized Didactics I 3 cr.**

The objective of this course is to train students in the study, analysis and utilization of literary texts (excerpts and complete texts) in middle and high schools, following the methodical reading grid, and the analytical review and literary essay grids.

**ELL471 Specialized Didactics II 3 cr.**

The objective of this course is to train students in discursive grammar, its textual inclusion, as well as its reinvestment in writings, within the middle and high schools, following constructivist methods.

**ELL490 School Internship 3 cr.**

Students will complete an observation internship in an elementary level class and in secondary level class for six uninterrupted weeks. The internship shall cover a complete teaching unit where they document their observations in a logbook (subject to supervision by the internship supervisor appointed by the related department). At the end of the internship, students will be called to give two simulations before the internship supervisor: one in an elementary level class and another in a secondary level class.

**ELL520 Culture and Modern Civilization Seminar 2 cr.**

This course is designed to examine some of the most important events and trends in modern world history. Students will discuss themes related to the Rise of the West and globalization. They will select and discuss topics in human culture in the context of how humans, as historical beings, are shaped by the thoughts and actions of their predecessors and how they influence the lives of those who follow them. The course will examine culture as a distinct heritage of ideas, values, and artistic expressions that undergo continual adaptation due to social changes. Students will also study religions: Buddhism, Hinduism, Judaism, Christianity and Islam.

**ELL521 English Literature I 3 cr.**

The aim of the seminar is to integrate the study of different 20th century literary theories and academic research writing. Students will examine the ways in which literary theories of the 20th century have been applied to canonic literary texts and have reshaped the reading and reception of those texts. They will look into the forms, the approaches and the structures employed. They will focus on selected writers, genres, issues, trends, or movements addressed in American, British, and/or world literatures from the Renaissance till now. The course includes reading primary and secondary sources related to poems, plays, and novels encompassing issues like race, gender, class, discourse and political power. Students will study writings that celebrate new freedoms and new ways of assessing the self and the world through literature and theory. Authors such as Shakespeare, Milton, Blake, Wordsworth, Tennyson, Hardy, Yeats, Joyce, Eliot, and others will be focused on. Students will explore diverse approaches, issues, and texts, and they will undertake an analysis of a text of their choice, using the references surveyed in addition to others, as part of their own chosen research project.

**ELL522 English Literature Seminar II 3 cr.**

This course examines the scope of colonialism/postcolonialism as a multi-disciplinary, often cross-disciplinary, re-examining the history and legacy of colonialism and incorporating the perspectives of the colonized with the purpose of relating this to English literature and postcolonial literature written in English. The aim of this course is to introduce students to a wide range of postcolonial criticism with the purpose of familiarizing them with the major contributors to the field and the significant arguments or counter-arguments that each has espoused, by means of a close reading of seminal articles and class discussions on their basis. In addition to knowledge of postcolonial critics and their articles, students will develop an

understanding of the postcolonial approach and method, so that they will acquire an ability to undertake a postcolonial reading and analysis of a text of their choice, using the references surveyed in addition to others, as part of their own chosen research project.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                  |              |

| <b>ELL524</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>English Linguistics Seminar I</b>             | <b>3 cr.</b> |
| The course provides an instructional framework of how to evaluate and participate in reforming language curricula. It emphasizes the development of teacher competency in the fields of curriculum designing, teaching and assessing English as a foreign/second language. During the course students will examine the development and implementation of effective research-based curriculum designing and instructional practices. They will explore theories, procedures, and instruments used for reforming language curricula and assessing language skills for proficiency. Students will also be responsible for evaluating and designing a language syllabus and setting formal/informal assessment strategies that fit with the syllabus designed.                                                                                                                                                                                                                                                                                                                                             |                                                  |              |
| <b>ELL525</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>English Linguistics Seminar II</b>            | <b>3 cr.</b> |
| This seminar helps students explore systemic functional grammar, a theory that aims to account for the use of language as a vehicle for communication between people in social and cultural contexts. During the seminar, students will experience the functions of language in representing situations and activities, in interaction and in creating discourse. They will be aware of how language users convey meaning through their choice of words and grammatical structures in specific situations. Students will analyze authentic texts and experience how to describe the lexical, grammatical and cohesive structures of texts and reflect on how the resources of the English language are employed in different types of discourse; and they will also learn why language users choose one wording over another to better reach their communicative goals.                                                                                                                                                                                                                                |                                                  |              |
| <b>ELL526</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Literary Issues</b>                           | <b>3 cr.</b> |
| This course aims to help students explore a variety of selected literary topics. They will read and analyze literary works drawn from English speaking and non-English speaking cultures. Through lectures and discussions, students will gain awareness of varied literary issues, including structure and technique, and a sense of the cultural backgrounds that inform those works. While reading and discussing literary topics, students will: demonstrate an understanding of literary terms, themes, strategies, and issues relevant to the works being studied; express their understanding of the relationship between literature and the historical/cultural contexts in which it was written; synthesize literature of non-English speaking cultures in terms of historical literary values as they reveal esthetic, political, social, and historical relationships between countries and eras; and demonstrate the ability to choose and apply appropriate critical methods for analyzing and writing about literature.                                                                  |                                                  |              |
| <b>ELL610</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Seminar: Comparative Literature</b>           | <b>3 cr.</b> |
| The seminar aims to explore with the students the field of comparative literature, contemporary theory, and modern approaches to literary texts. It is intended to help students develop an understanding of literature and culture, as well as technologies and esthetic forms of mediation and transmission of world views, values and critiques. During the seminar, students will discuss originals and works in translation, experience cross-cultural comparisons, and the multilingual, pluralistic and global world. They will also compare literature to other arts, media and further modes of writing. The broad perspective of the seminar is to help students think critically and analytically about what literature is and does; how literature relates to other fields and kinds of writing; how literary texts produce their complex webs of meaning; and what the ethical relevance of literature is in a globalized world.                                                                                                                                                          |                                                  |              |
| <b>ELL612</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Seminar: Applied Linguistics</b>              | <b>3 cr.</b> |
| This seminar provides an overview of the field of applied linguistics, its history, branches and scope. It encourages research collaboration in language learning/teaching and language assessment. It also guides students to examine the different linguistic, social, and cultural factors in human communication through their looking at a variety of levels in language and how such variation constructs and is constructed by identity and culture. An exploration of attitudes and ideologies about these varieties will also be tackled. Moreover, the course offers students the opportunity to explore the research literature on a range of topics related to the study of language and society, including sociolinguistic theory and research methodology, the ethnography of speaking, the role of social variables (such as age, socio-economic status and sex/gender) in language variation and change, bilingualism and language contact, and language policy and planning. Students will carry out an empirical analysis of a set of language data as part of their course project. |                                                  |              |
| <b>ELL621</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Seminar: English Literature</b>               | <b>2 cr.</b> |
| The aim of this seminar is to enable students to consider how contemporary Anglo-American literature re-imagines social history, genre, politics and identity. The seminar will focus on influential works written since the beginning of the 20th century by writers such as George Orwell, Virginia Woolf, Maxine Hong Kingston, Margaret Atwood, Wole Soyinka, Carol Ann Duffy, John Fowles and Angela Carter, among others. Students will examine literary texts as examples of contemporary culture, focusing on issues such as postmodernism and multi-culturalism. They will also tackle topics such as the representation of space and identity in depictions of the city, the small town and suburbia, fairy tale and gothic horror and new technologies and culture.                                                                                                                                                                                                                                                                                                                         |                                                  |              |
| <b>ELL623</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Seminar: English Language Acquisition</b>     | <b>2 cr.</b> |
| The aim of this seminar is to help students explore the second language acquisition (SLA) theory and examine some of the latest research methodological tools in the field. Students will also study the complex variables underlying second language acquisition and the different perspectives of SLA theories. Among the topics tackled are: the effect of age at which a second language is learned, the learner's rate of acquisition and attainment profile, the effects of language impairment and loss in second language grammars, the influence that first language exerts on the acquisition of a second language, and a number of psycholinguistic and neurolinguistic aspects of SLA. Students will also gain experience of second language research through a small-scale study they will conduct in an area of second language knowledge.                                                                                                                                                                                                                                               |                                                  |              |
| <b>ELL690A</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Master Dissertation</b>                       | <b>6 cr.</b> |
| <b>ELL700</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Seminar: Research Methodology</b>             | <b>3 cr.</b> |
| This course is designed to help PhD students develop their research projects and assist them in defining their mode of enquiry. It is constructed to guide them through a general overview of research, its methodologies, its challenges and its organization, including creative practice. Students will be equipped to plan, organize their research and communicate their findings. Thus, students will explore a variety of research tools, methods, ethical and legal questions. They will develop the ability to reflect critically on the processes of research, articulate critical language appropriate to their research aims and interests, develop a supportive research environment, and become familiar with a range of research practices applicable to sciences, humanities, social sciences, literature and art.                                                                                                                                                                                                                                                                     |                                                  |              |
| <b>ELL710</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Seminar: Modern English Literature</b>        | <b>3 cr.</b> |
| The aim of this seminar is to encourage students to explore and discuss some ways in which leading English language poets, novelists, short story writers and playwrights have engaged the questioning spirit of recent times. The seminar will focus on influential works written, since 1960, by writers such as Martin Amis, Rabih Alameddine, Seamus Heaney, Margaret Atwood, Wole Soyinka, Allen Ginsberg, Gregory Corso and Salman Rushdie. The course also considers how contemporary literature re-imagines history, genre and identity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                  |              |

The aim of this seminar is to examine a range of syntactic phenomena and evaluate opposing theoretical analyses proposed to account for them. Students will construct theoretical analyses and evaluate their explanatory adequacy for Universal Grammar. Topics include low frequency (LF) phenomena, functional projections, and structural representations. Students will also study the language and explore its syntax and uses within varied contexts.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                   |              |

| The course is designed for students who hold a degree in Mathematics. It aims at introducing students in TD to methods that allow the acquisition of skills specific to the teaching of Mathematics. The course focuses on the Lebanese Curriculum in the Intermediate cycle, and addresses fundamental parts of the second cycle of basic education to ensure harmony and continuity between the different parts of the mathematics program. It focuses on other concepts that are not included in the program and are useful to allow students to comfortably reach a higher level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                   |              |

| This course considers the mathematical program planned by the Lebanese curriculum and to focuses on core parts of the intermediate cycle program and prerequisites for university to ensure harmony and continuity between the different parts of the Lebanese educational system. It introduces students to the use of educational resources: the strategies, methods, educational activities (planning, testing, and evaluation) and the choice of appropriate teaching materials and technology. After the course, the student will know the appropriate methods and theories in teaching and be able to model, to analyze, to induce, to deduce, to abstract and to apply.                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                   |              |

| The objectives of the course are: - discovering how music can be an additional means of communication for the disabled child; - exploring musical situations developed with children with disabilities; - promoting the relationship of special needs students with their environment (other children, professionals, parents etc.) by music. It deals with the issues and the values of integration today and the importance of the artistic practice of people with disabilities: access to culture, to museums etc. It also studies cases of students with different disabilities and their musical practices. A visit to institutions dealing with children with disabilities, in order to have direct observation practice, would be an integral part of this course.                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                   |              |

| Students learn several pieces of music to be played on Orff instruments. These pieces are organized around arrangements of authentic folk music, pieces from the Orff/Keetman publications, and student compositions. Students develop polyphonic awareness (singing a song while playing an instrument) and the basic technical skills for pitched percussion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                   |              |

| Introduction: The rhythm in our everyday life. The course will consist of a theoretical part: rhythm and development: A child's timeline - rhythm and education: incidents that accompany rhythm concerning schooling. Also a practical part: Perception of rhythm through body: Discovering the pulse: The construction of rhythm according to the normal developmental stages: Rhythm and coordination: How to follow rhythm with the body (individually or in groups) Coordinate body movement with rhythm: Reproduction and creation of rhythm: Reproduction of the rhythmic structure: Creating and elaborating on rhythm through the body: Rhythm and instruments of percussion - Introduction of instruments of percussion in infants: Creation of rhythm.                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                   |              |

| Music psychology is the empirical study of how humans perceive and experience music, and the resulting impact on individual, group and cultural behavior. This course will encompass an introductory exploration of music psychology across a lifespan. It explains the different stages of the musical development of the baby, child and adolescent at the sensory-motor, social/emotional, psychomotor and intellectual/communicative levels.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                   |              |

| Musical training, in a perspective of evolution continues throughout the cycle 1, 2 and 3, developing the listening sense of students, their creative potential with regard to the sound world - and skills to express themselves and to communicate through music. The topics of this course are: how to teach music to children in cycle 1, 2 and 3; the role and purpose of music education in both primary and elementary classes; and the effects of music education on the personality of the child. It will examine in particular the following points: - Communicating to the child the pleasure that music gives. - Appropriating the musical content of a musical play and exploiting its inherent expressive elements. - Applying elements of technique and rules for ensemble music. - Sharing experience of interpretation and appreciation. - Examining an excerpt of musical work or a musical performance with regards to content items. - Examining an excerpt from a musical work with regards to socio-cultural aspects (2nd and 3rd cycles). |                                                                                                                                                                                                                                                                   |              |

| This course in musical education focuses on education in complementary and secondary classes. The music program in these classes revolves around three complementary and interdependent skills: - Creating musical works, interpreting musical works and appreciating music. In the music program, the word work is used in its broadest sense; it refers to both the achievement of the student and the composer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                   |              |

| In this course, the student is required to develop professional autonomy and acquire an adequate mastery of skills for teaching, related to the diversity of schools milieu and taking into consideration development stages of children. Trainee teachers prepare lesson plans, chooses teaching approaches, implementing disciplinary, didactic and pedagogic knowledge and evaluates their educational practice through reflexive analysis. This internship is for a period of 21 days during which the candidate teaches music classes in three different schools for a period of one week in each school. Support and coaching meetings between a designated supervisor and the trainee teacher are planned at the University throughout the training. The internship also includes a period of preparation at the University and provides time for reports writing, estimated to be 24 hours. |                                                                                                                                                                                                                                                                                           |              |

| This graduate level course gives students the opportunity to enhance their writing abilities and develop their critical thinking. It attempts to help students achieve greater competency in reading, writing, reflection, and discussion emphasizing the responsibilities of written inquiry and structured reasoning. Students are expected to investigate questions that are at issue for themselves and their audience and for which they do not already have answers. In other words, this course should help students write about what they have learned through their research rather than simply write an argument supporting one side of an issue or another.                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                           |              |

| The management of communities and teams is a knowledge and know-how essential to any leader in this area. Added to those are other requirements when it comes to management in the Church: requirements related to the nature and mission of the latter; also in relation with "Patron" of this management, which is the Holy Spirit. In this course, the pastoral actor and researcher are introduced to the discernment of the management gift, a gift called "leadership", "animation" or "management" and are introduced to the success of this task in the exercise of their Christian mission.                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                           |              |

| If evangelization was the primary proclamation of the Gospel, the task of catechesis would be to deepen the meaning and nuances of the message originally sent by evangelization. It is the exercise to which this course refers to: the actor and the pastoral researcher learn how to relay evangelization, taking into account the ecclesial, socio-cultural and other.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                           |              |

| Given the diversity of Churches, the Middle East and particularly Lebanon, are places where the ecclesiology is learned and witnessed in the everyday relations between Christians of different affiliations. This course provides the pastor, the catechist and pastoral researcher the opportunity to observe and analyze the complexity of the relationship between ecclesiological "statements" and "experiences" of the Christian faith in everyday life, when believers come from several church traditions.                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                           |              |

| This course helps various pastoral actors and researchers make an analytical and critical theological reading of the relationship between the Christian faith and the modern world. This thinking is mainly based on texts of the Second Vatican Council.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                           |              |

| In a world that is becoming more and more secularized, where Christianity is marginalized and whose language is not common, the Church needs means of communication to provide this secularized world with its pastoral care. This course will be approached according to the two following axes:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                           |              |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <ul style="list-style-type: none"> <li>• Communication and testimony based on the idea "Woe to me if I do not preach the gospel". This axis develops into practice the theme of the media as evangelistic and pastoral means. The transmitter sends a message to the receiver.</li> </ul> |              |

- Communication and communion: the media will allow the closer bringing together of humans as brothers under the fatherhood of God. The communication of God is never without incarnation: Christ "the first and perfect communicator"; that's why, the transmitter will not only become a message bearer but he himself becomes a message to the receiver.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                           |              |

| In the monastic tradition, the <i>lectio divina</i> is a way to approach the reading of the Bible to relish it and draw on from the bread of life. The course will present the traditional teaching on the <i>lectio divina</i> , its place in the spiritual life (reading, mediation, prayer, contemplation) and its current application. The theoretical teaching (How to do? What to do? With what measures should we approach the text? What are the difficulties?) will be structured around student questions and a reading of John 9-11 which will serve as an introduction to the Word of God and a spiritual life journey.                                                                                                                                           |                                                                           |              |

| The word "mystagogy" is now on many lips. This certainly reflects the feeling that everything does not end with a sacramental celebration and that catechesis still has its place after the celebration. However, this intuition needs to be clarified and better defined. We feel that there is a successful fitting together between a catechetical process that precedes the liturgical celebration, the liturgy itself and a possible catechetical practice after the celebration. We examine what conditions must be put in place so that the liturgical experience becomes "what we have heard, what we have seen, what we have touched concerning the Word of life (1 John 1: 1)."                                                                                     |                                                                           |              |
| <b>ERP603</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Conduct of Catechetical Projects</b>                                   | <b>3 cr.</b> |
| The objective of this course is to introduce students to different aspects of catechesis intervention and develop a capacity to enable them to recognize the main aspects of a catechetical experience (links to the Word, to the experience, to the Church, to the world, to the spiritual life and teaching models), learn to make a critical review and to implement them in given situations. In addition, this course will also enable them to browse the different communication models on which the act of "transmitting" can be based in a church within a pluralistic world and in an "exploded" society and determine how to implement various catechetical projects while noting, in the form of personal synthesis, the basic elements of the current catechesis. |                                                                           |              |

| Many pastoral interventions involve the actualization of the Word of God. How is it done? How to preach the Word? Given the double danger of an Orthodox word that is cut off from the reality of people or a popular word, but which dissolves the radicalism of the message, how can we be faithful to the Gospel?                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                           |              |

| The theoretical lessons of the first course (Geomatics: GIS And Remote Sensing I) will be coupled here with practical applications dealing with concrete examples. Students will use real and current databases. They will benefit from the intervention of researchers and professionals specializing in the use of geomatics tools in various fields (environmental management, risk mapping, etc.). The acquisition of data in the field and its integration into the GIS will help to better understand the geographic information processing chain. The tools used will be the most common in the professional world (ArcGis, Spatial Analyst ...), each student having the necessary computer equipment.                                                                |                                                                           |              |

| This module presents a first overview of analytical methods used for the environmental measurement of organic pollutants and inorganic elements. Analytical separation techniques (HPLC, GC), spectroscopic and electrochemical methods are developed. The techniques described will be systematically illustrated by environmental applications and implemented during practical work.                                                                                                                                                                                                                                                                                                                                                                                       |                                                                           |              |
| <b>ETC615</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Sample Processing and Online and In-Situ Measurements</b>              | <b>2 cr.</b> |
| This module presents techniques and methods for sampling and sample retention, passive sampling, extraction / pre-concentration and online measurement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                           |              |
| <b>ETC565</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>General Presentation of The Atmosphere</b>                             | <b>2 cr.</b> |
| General presentation of the structure, composition and dynamics of atmospheric systems: General presentation of the atmosphere and its gaseous constituents, liquid and particulate; Notion of atmospheric equilibrium and stationary state; Atmospheric reactivity: example of reactivity of semi-volatile species (pesticides, dioxins ...); Criteria Air Contaminants: identification of the induced problem, identification of sources, sinks and their relative importance; Atmospheric carbon balance; Chemistry of the sulfur and implication in the acidification of the rains.                                                                                                                                                                                       |                                                                           |              |
| <b>ETC620</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Physicochemistry of The Atmosphere and Atmospheric Reactivity</b>      | <b>3 cr.</b> |
| Understanding the major chemical and physicochemical atmospheric problems and their regulatory approach: Greenhouse effect and global warming.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                           |              |
| <b>ETC625</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Elements of Meteorology and Quality of Confined Atmospheres</b>        | <b>3 cr.</b> |

Presentation of the role of meteorology on air quality and the transport of pollutants and study of the quality of indoor atmospheres.

**ETC630 Environmental Project 1 cr.**

Professional situation by adopting a multidisciplinary approach. Master's students will carry out an integrative field study. This work could be an applied study sponsored by companies, communities, design offices or university laboratories, or a one-week field workshop during which students will analyze on a single site the different components of the environment (air, soil, water). Oral defense of the project is carried out before a jury composed of professionals and teacher-researchers involved in the project.

**ETC635 Hydrogeology 1 cr.**

This course will help students to master the knowledge of the processes of the continental cycle of water, on the surface (soil-atmosphere) and on the subsurface (aquifers). Students will be able to discuss investigation techniques used in hydrogeology (test pumping) and geophysical prospecting.

**ETC640 Treatment of Effluents and Odors 2 cr.**

To be able to limit the environmental impacts of effluents: treatment of industrial liquid effluents (Physical, chemical and biological treatment of liquid effluents, Quality of water after treatment), and treatment of gaseous effluents and odors (physical and chemical treatment of gaseous effluents, analysis, origin and treatment of odors).

**ETC697A Analytical Strategy and Study of Pollution 6 cr.**

Module of scenario of the students on an analytical problematic or on a case of pollution in order to enable them to mobilize the knowledge acquired on a concrete case going from the sampling, the optimization of method and the analytical validation. It consists of work in groups of 3 to 4 students, supervised by a teacher, aiming either at the development of analytical method (bibliographic research, and method optimization, or feasibility test, or validation tests), either at the study of pollution that has occurred or is simulated in its historical, analytical, regulatory and technical aspects.

**EVO201-2 / 303-4/ 405-6 Occidental Vocal Ensemble I - II - III - IV - V - VI 1 cr.**

The student, guided by a teacher, must work with a group of singers and display a progressive quality of interpretation and an important degree of musical maturity.

**EVS470 Specialized Didactics I 3 cr.**

This course is designed for students holding a degree in Visual and Performing Arts. It aims to introduce students learning a TD to didactic methods concerned with image.

The course requires students analyze and produce images for educational purposes.

This is a course with double dimension, theoretical and practical.

**EVS471 Specialized Didactics II 3 cr.**

This course develops methods and scenic arts practices for educational and therapeutic purposes, such as psychodrama.

Its objectives are to facilitate relations, develop capacity for expression, representation, creativity, etc.

**EVS490 School Internship 3 cr.**

This course aims to enable the student to put into practice his/her acquired knowledge, experience the possibilities of change, verify, consolidate or make changes to the acquired methods and become familiar with different learning methods. At the end of the course the student is required to write a detailed course report conforming to the internship protocol prepared by the head of DE.

**FIN421 Financial Markets 3 cr.**

**Prerequisites** BUS211 or MAT312

This course enables students to understand the concepts, terminology, instruments, and investment strategies when dealing with money. This includes the introduction of the broad and closely related areas of financial markets and investments, including the various tools used to determine the value of different investment vehicles. The risk inherited with investing as well as the risk return tradeoff will be considered. Accordingly, the principles of modern portfolio management, including diversification, will be addressed. Particularly, common stocks will be analyzed and valued using multiple valuation techniques. Within the context of fixed income valuation, the concept of bond duration and the yield curve will be examined. Financial derivatives, including options and futures, will also be considered as a hedging tool in the overall investment strategy. Practical application will be emphasized throughout the course using Thomson Reuters Eikon.

**FLM210 Music of Film 3 cr.**

Study of music, sound and acoustics as they relate to performance environments, techniques associated with recording, mixing, processing, automation, and reproduction of dialogue, effects, and music tracks for theater sound design.

**FLM240 History of American Cinema 3 cr.**

This course is designed to give students an understanding of the history of American cinema from its beginning in 1895 to the present time. It will focus on the silent cinema of D.W. Griffith, the Burlesque film of C. Chaplin and B. Keaton, the genre films of the studio era, the war and post-war noir film, the new Hollywood cinema of the 1960s, the films of the Movie Brats of the 1970s, and the post-modern cinema of the 1980s and on. Special attention will be given to the evolution of the art of the motion picture, including elements of camera, lighting, sound, editing, production design, and narrative structure and the technological evolution of the motion picture, including aspects of inventions and innovations such as color, widescreen, quality sound, and electronic imagery.

**FLM241 History of European Cinema 3 cr.**

This course is designed to give students an understanding of the history of European cinema from its beginning in 1895 to the present time. It will focus on the early films of the Lumière Brothers, the German expressionist school, the Soviet montage schools, the French surrealist cinema, the Italian neo-realist film, the French new wave film, the 2nd Italian renaissance, the new-German cinema, and the Danish Dogme 95 movement. Special attention will be given to the way in which history has shaped not only film content but also its form.

**FLM316 Introduction to Scriptwriting 3 cr.**

The students will acquire basic knowledge and techniques of writing a narrative script for film. The students will be able to create and develop characters, and story line for classical film structure.

**FLM317 Introduction to Film Directing 3 cr.**

Students will acquire a basic understanding of staging, directing actors, framing, and different notions of space and time. Students will apply these basic techniques on short segments of video.

**FLM319 Introduction to Cinematography 3 cr.**

**Pre-requisites** PHO121 Or PHO225

Students will acquire knowledge in the theory of film form. Students will apply these different forms through framing, lighting and assembling shots to create a system of expression based on the indirect time movement images.

**FLM321 Advanced Cinematography 3 cr.**

|                       |                                                                                                                                                                                                                                                                                                                                                          |              |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <b>Pre-requisites</b> | FLM220 Or FLM319                                                                                                                                                                                                                                                                                                                                         |              |
|                       | Students will acquire advanced knowledge in the theory of film form. Students will apply these forms by manipulating and assembling shots to create a system of visual expression based on the time-images.                                                                                                                                              |              |
| <b>FLM322</b>         | <b>Film Language</b>                                                                                                                                                                                                                                                                                                                                     | <b>3 cr.</b> |
|                       | Students will understand the basic semiotics, language, and subjectivity theory (Freudian and Lacanian theory). Students will be able to implement the classical film language theory in films.                                                                                                                                                          |              |
| <b>FLM344</b>         | <b>Theory and Aesthetics of Film</b>                                                                                                                                                                                                                                                                                                                     | <b>3 cr.</b> |
|                       | This course focuses on the various theoretical methodologies that have developed in film theory and esthetics and that have proven useful for the analysis of films and cinema, such as realism, genre and auteur, reflexivity, intertextuality, psychoanalysis, and feminism.                                                                           |              |
| <b>FLM416</b>         | <b>Advanced Scriptwriting</b>                                                                                                                                                                                                                                                                                                                            | <b>3 cr.</b> |
| <b>Pre-requisites</b> | FLM201 Or FLM316                                                                                                                                                                                                                                                                                                                                         |              |
|                       | Students will write and develop a narrative script, either through the adaptation of a story, or from their own life experience.                                                                                                                                                                                                                         |              |
| <b>FLM417</b>         | <b>Advanced Directing</b>                                                                                                                                                                                                                                                                                                                                | <b>3 cr.</b> |
| <b>Pre-requisites</b> | FLM202 Or FLM317                                                                                                                                                                                                                                                                                                                                         |              |
|                       | Students will implement already known techniques in directing, and apply styles and direct actors in short segments.                                                                                                                                                                                                                                     |              |
| <b>FLM441</b>         | <b>Sound Theory of Film</b>                                                                                                                                                                                                                                                                                                                              | <b>3 cr.</b> |
|                       | The students will understand the basics of sound theory in films, based on different concepts introduced by Michel Chion, Kaja Silverman and Slavoj Zizek, etc. Students will acquire a basic understanding of a critical approach to sound in films.                                                                                                    |              |
| <b>FLM470</b>         | <b>Final Project</b>                                                                                                                                                                                                                                                                                                                                     | <b>3 cr.</b> |
|                       | Students will write, shoot, direct and finalize a short film. Students will consult their assigned academic supervisor in the different phases of production and post-production.                                                                                                                                                                        |              |
| <b>FLM473</b>         | <b>Silent Film</b>                                                                                                                                                                                                                                                                                                                                       | <b>3 cr.</b> |
|                       | Students will write and make their own short silent film. Students will implement already acquire knowledge and apply it cinematically without the use of dialogue.                                                                                                                                                                                      |              |
| <b>FLM474</b>         | <b>Experimental Film</b>                                                                                                                                                                                                                                                                                                                                 | <b>3 cr.</b> |
| <b>Pre-requisites</b> | FLM317 Or FLM202                                                                                                                                                                                                                                                                                                                                         |              |
|                       | Students will create their own short films through a personal approach based on their experiences and developed through all the different phases of idea, production, filming and editing.                                                                                                                                                               |              |
| <b>FLM475</b>         | <b>Documentary Film</b>                                                                                                                                                                                                                                                                                                                                  | <b>3 cr.</b> |
| <b>Pre-requisites</b> | FLM202 Or FLM317                                                                                                                                                                                                                                                                                                                                         |              |
|                       | This course covers the study of the documentary genre through definitions, works, styles, forms, strategies, attitudes, conventions, practitioners, and the history of documentary film. It will also focus on the production of a documentary film and will allow students to directly apply cinematic language and esthetics to the stories in reality |              |
| <b>FLM517</b>         | <b>Lighting Workshop for Film</b>                                                                                                                                                                                                                                                                                                                        | <b>3 cr.</b> |
|                       | Students will acquire technical know-how in supervised exercises on a stage or in an exterior, and in screenings of scenes. Students will participate in discussions aimed at learning to master the lighting to create an appropriate mood or atmosphere of a premeditated scene recorded on a film or through an electronic system.                    |              |
| <b>FLM537</b>         | <b>Screenwriting for Film and Television</b>                                                                                                                                                                                                                                                                                                             | <b>3 cr.</b> |
|                       | Through advanced problems in the field of screenwriting, students will acquire professional know-how in documentary and feature film writing, using discussions and exercises with an emphasis on research and preproduction.                                                                                                                            |              |

|                       | Supervised filming of short projects on stage and at exterior locations that explore the complexity of the process, emphasizing exposure, lighting, and handling of digital professional cameras.                                                                                                                                                        |              |
| <b>FLM620</b>         | <b>Theory of Sound in Films</b>                                                                                                                                                                                                                                                                                                                          | <b>3 cr.</b> |
|                       | Story of film theory, mainly through the theoretical work of Michel Chion (in particular his concept of acousmetre) and through the films of Starub-Huillet, Tati, Duras, Lynch, Syberberg, etc.                                                                                                                                                         |              |
| <b>FLM630</b>         | <b>Seminar in Film Theory</b>                                                                                                                                                                                                                                                                                                                            | <b>3 cr.</b> |
|                       | Study of film theory through the works of Vertov, Eisenstein, Bazin, Metz, Deleuze, Virilio, Chion, Bonitzer, feminism (Mulvey, Silverman, et.), psychoanalysis (Zizek, etc.), and postcolonialist thinkers.                                                                                                                                             |              |
| <b>FLM634</b>         | <b>Advanced Screenwriting</b>                                                                                                                                                                                                                                                                                                                            | <b>3 cr.</b> |
|                       | Through advanced problems in writing for original film, students will write a feature film. Students will be coached and supervised by a mentor.                                                                                                                                                                                                         |              |
| <b>FLM640</b>         | <b>Film and the other Arts</b>                                                                                                                                                                                                                                                                                                                           | <b>3 cr.</b> |

Students will discuss in class issues related to films and other arts, plus weekly film screening. Studies in interrelationships between on the one hand film and on the other painting, dance and theater, through examination of such issues as the different modalities of presence in film and theater, the various functions of the frame in film and painting, the correspondence of the freezing that is part of the cinema apertures (frozen frames), and the diegetic freezing of the dancer. May be repeated twice for credit.

**FLM650** **Film Authors** **3 cr.**

Students will participate in discussions in class, screenings to be arranged. Studies of several critical discourses that have influenced the analysis of film: Walter Benjamin's "work of art in the age of mechanical reproduction"; Althusser's interpellation; Lacan's mirror's stage; Virilio's dromology and logistics of perception; Debord's society of spectacle; Edward Said's orientalism, etc.

**FLM675** **Advanced Fiction Workshop** **3 cr.**

This workshop consists of a discussion, lasting for three hours, and a laboratory, to be arranged. It is designed for graduate students. They will study the basic techniques of film production, including preproduction planning and production of a short group film.

**FSC600 - SCF600** **Research Methodology** **1 cr.**

The objective of the course is to introduce students to scientific research. Topics to be covered are: interest and research objectives; methodologies used in scientific research; how to define a problem; data collection; documentary research; analysis of the collected knowledge; structure of a Master thesis; writing a report; writing the bibliography; making a scientific poster; and how to approach giving an oral presentation.

**GAA227** **Food Microbiology** **2 cr.**

**Pre-requisites** BIO211

**Co-requisites** GAA277

This course is a study of the fundamentals of food microbiology, including its history, classifications, spores and their importance, and the most common and serious pathogenic food microorganisms. Fermentation, spoilage and control methodology are also discussed.

**GAA277** **Food Microbiological Lab** **1 cr.**

**Pre-requisites** BIO211

**Co-requisites** GAA227

These laboratory sessions, which accompany GAA 227, provide students with a technical experience of the preparation of liquid and solid culture media (differential, enriched, specific and selective). They deal with inoculation, incubation and enumeration of microorganisms found in liquid and solid food products. Staining procedures and biochemical tests such as ELISA and AGID are performed as well.

**GAA339** **Hygiene and Quality Control of Food** **3 cr.**

**Pre-requisites** GAA227

This course aims to discuss the current issues of food safety and quality in the food chain. The theoretical approach will enable students to acquire a deep understanding of the steps that would lead to the establishment of a quality system in food industries. These steps aim at ensuring that production conforms to a certain set of standards and through this they contribute to the fulfillment of consumers' safety requirements.

**GAA340** **Food Composition and Analysis** **3 cr.**

**Pre-requisites** BCH215 and CHM212 and CHM210

This course describes the food as a complex system defined by an aqueous phase, a three-dimensional matrix of proteinaceous, oily and / or carbohydrate nature and dispersed elements. It also deals with the different modern principles and techniques used in the determination of the chemical composition of foods. It will cover the use of titration, extraction, gravimetry, colorimetry, spectrometry, and chromatography in food analysis, as well as methods for data analysis and presentation of results. . Laboratory sessions are directly related to theory.

**GAA378** **Food Composition and Analysis Lab** **1 cr.**

The main purpose of this course is the study of the main chemical constituents of foods. This course introduces the different principles and modern techniques used in the determination of the chemical composition of foods. It will cover the use of titration, extraction, gravimetry, colorimetry, spectrometry, and chromatography in food analysis, as well as methods for data analysis and presentation of results. Laboratory sessions are directly related to the theory.

**GEO412** **Ecology and Environment** **3 cr.**

This course aims to introduce students to environmental problems. The notion of ecology is introduced as well as its relationship with the environment. The various chemical processes in the atmosphere, waters, soils and the biosphere are discussed. The disruption caused by various human activities, chemical pollution and toxic substances, and the impact on biodiversity are argued.

**HIS215** **Lebanon in the Ancient Period** **3 cr.**

**Prerequisites** LFR120

Students will be introduced to the ancient history and antique archeology of Lebanon, including the main historical events and the archeological sites that make this period important for Lebanon. Students will present, through written and material testimonies, the diverse civilizations and the cultures of Lebanon, having gained knowledge and experience through working on archeological sites and studying several themes: arts, crafts, trade, religion, politics, and society. The period examined, distributed over six chronological phases, starts with pre-history and ends at antiquity/the pre-Byzantine era.

**HIS220** **Lebanon in the Medieval Period** **3 cr.**

**Prerequisites** LFR120

Students are introduced to the history of medieval Lebanon, a very important period, which begins with the Arab-Muslim conquest of Lebanon in 636 and which ends in 1516 with the victory of the Ottomans over the Mamelukes. Students will become familiar with research while using primary sources.

**HIS225** **Lebanon in the Modern Period** **3 cr.**

**Prerequisites** ENG120

The history of modern Lebanon extends from the date of the Ottoman victory over the Mamelukes during the battle of Marj Dabek in 1516 to the beginning of the First World War in 1914. Students will learn chronologically about the great periods and events in Lebanon's history, as well as the reign of the Maan and Chehab dynasties, and both Caïmacamias, Moutasarifiya (from 1861 to 1915), and the evolution of Lebanese society.

**HIS230** **Lebanon in the Contemporary Period** **3 cr.**

This course covers the history of contemporary Lebanon from the eve of World War I until the present day. This history includes the formation of the State of Lebanon and the struggle to maintain its integrity and independence. Lebanon was the first political entity established in the Near-East since the 16th century. The roots of its political institutions were built during the Mutasarifiya, under the guarantee of major powers. The Lebanese political entity was confirmed through the declaration of the Lebanese Republic in 1926 and its independence. Independent Lebanon, since 1943, has

experienced periods of stability and prosperity as well as periods of disturbance and socio-political agitation on the local scale, depending on regional and international rivalries.

| This course approaches history as an experimental science within the constellation of human sciences. It teaches the student-historians how to apply rigorous thought processes, which consist of a series of critical examinations on a variety of testimonies (material, oral and written sources), and on information gathered. The historians master the research processes through independent analysis, the use of supplementary material and the application of critical apparatus (authenticity, origin, restitution, originality), to begin developing the chosen subject. This fundamental course teaches student-historians to work independently with critical minds.                                                                                                                                                                              |                                                     |              |
| <b>HIS320</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Geography</b>                                    | <b>2 cr.</b> |
| Geography is a science, which is interested in the inhabited earth. It analyzes the natural facts in relation to human beings, their distribution, their movements, their activities and their actions. Beyond the influence of the natural mechanisms on life, geography studies the great contemporary problems: social and economic globalization, inequalities of development, ecological risks, and the overcrowding of cities, etc.                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                     |              |
| <b>HIS385</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Ancient Near-East: Egypt</b>                     | <b>2 cr.</b> |
| This course introduces students to the history of Egypt in ancient times, focusing on the chronology of the Pharaohs and their power in the Near East. Students will learn how to read and even to translate hieroglyphs. Students should be able to use primary sources and contextualize the topic in drawing a comparative chronology between Egypt and the rest of the eastern world.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                     |              |
| <b>HIS390</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Ancient Near-East: Mesopotamia</b>               | <b>2 cr.</b> |
| This course focuses on the history of Mesopotamia in ancient times. This is a fundamental course which enables students to understand the context of the establishment of the first state-cities in the world. Students will use classical methods of learning, such as chronology and scale analysis. They should be able to establish the link between the history of Mesopotamia and the history of Egypt and other countries during the same period.                                                                                                                                                                                                                                                                                                                                                                                                       |                                                     |              |
| <b>HIS395</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Ancient Near-East: Syria</b>                     | <b>2 cr.</b> |
| This course intends to focus on the idea that ancient Syria has never been a centralized and strong state. Students will use methods of contextualization to understand that throughout history its cities have been influenced by empires and neighboring kingdoms: the Hittite Empire in the North, Assyria in the East, and Egypt in the South. This course will also consider the geography of Syria and its geopolitical situation. Finally, it will refer to archeological fields in order to enhance the importance of Syria at a certain time of History.                                                                                                                                                                                                                                                                                              |                                                     |              |
| <b>HIS400</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Greek and Byzantine History</b>                  | <b>2 cr.</b> |
| Greek history lives on thanks to its rich heritage, especially in the Mediterranean area. The course will present the constitutive elements of this long history since the emergence of the Minoan and Mycenaean "palatial" civilizations up to the fall of the Byzantine Empire in 1453. Students will study the cultural aspect of the Greek civilization, which reached its apogee with Hellenism. The course will help the students to analyze the process of diffusion of Christianity all around the Mediterranean coast, realized by the foundation of the Byzantine Empire and the uniqueness of the Basileus. A political approach will be adopted, analyzing the different regimes in the Greek and Byzantine world, from democracy to the powerful Empire, through tyranny. Attention will be given to the evolution of the city of Constantinople. |                                                     |              |
| <b>HIS405</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Roman History</b>                                | <b>2 cr.</b> |
| The course examines, through the history of the Roman entities, the different factors which enhance the role of Rome as a Mediterranean power. The development and enlargement of the Roman influence will be explained during both periods: period of the Roman Republic and then the period of Roman imperialism. Students will use a comparative approach to examine the Roman influence during these two periods and in different areas. Students will furthermore be able to define the process of Romanization and to develop a critical approach concerning the heritage of the Romans.                                                                                                                                                                                                                                                                 |                                                     |              |
| <b>HIS425</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Islam, from Mahomet to 1516</b>                  | <b>3 cr.</b> |
| Gathered under the leadership of the prophet Mahomet, in the 7th century, the Arabs dominated the Near-East within a few years and continue the conquest in Africa and in Europe. The Caliph Rachidoun (632-661) yielded power to dynasties, which governed Dar-el-Islam of various capitals. Students will closely follow the stages of the expansion, the moments of the transfer of power, the organization of the administration and the governmental institutions of the Arab community from social, economic, cultural and scientific perspectives.                                                                                                                                                                                                                                                                                                      |                                                     |              |
