| <b>HIS430</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Western Middle Ages</b>                          | <b>2 cr.</b> |
| The course describes the western Middle Ages period with a social, political, military and cultural approach. Students will be introduced to the first theories of modern states, which contributed to transform Europe from the 5th to the 14th centuries. Primary sources and works of art will help the students to understand the different representations of the societies, their leaders and the new-born states. A comparative approach is necessary to understand the different evolutions in the European areas.                                                                                                                                                                                                                                                                                                                                     |                                                     |              |
| <b>HIS435</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>The Ottoman Empire</b>                           | <b>3 cr.</b> |
| The interest in writing about the Ottoman period in history was renewed when local archives were made accessible in the second half of the 20th century. The image of a tyrannical and fanatical power, which made Europe tremble, was sweetened and the emphasis was put on the internal organization of the Empire. Defeated in Lepante in 1570, stopped in Vienna in 1683, and overruled in the Treaty of Kaynardji in 1774, the Empire weakened and became "the sick man of Europe" throughout the 19th century and had disappeared by the end of World War I.                                                                                                                                                                                                                                                                                             |                                                     |              |
| <b>HIS450</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Modern Europe</b>                                | <b>3 cr.</b> |
| This course deals with the history of Europe from the Renaissance until the end of the Monarchy. Students will examine financial and economic questions, the political regimes, religious reforms, the Industrial Revolution, as well as the psychological and social structures of the period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                     |              |
| <b>HIS455</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>The Contemporary World</b>                       | <b>2 cr.</b> |
| This course will focus first on the interwar period of the 20th century. It will then deal with the main reasons that disturbed the world order during the second half of the 20th century: bipolarization, positive neutrality, decolonization, the European construction, the end of communism, the role of the USA as a superpower, globalization, international organizations, etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                     |              |
| <b>HIS460</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Contemporary Middle East</b>                     | <b>3 cr.</b> |
| The expression "Middle East" concerns the area including the states of the Fertile Crescent and those of the Arab Peninsula, and Turkey, Pakistan, Iran, Afghanistan, Libya, Egypt, and sometimes India. The course limits the study to states of the eastern Mediterranean Sea and Iraq. Students will examine themes dealing with the political and economic evolution, social mutations, demographic dynamics and some geopolitical questions focusing on contemporary issues, such as conflicts related to water management and the Arab Spring.                                                                                                                                                                                                                                                                                                           |                                                     |              |
| <b>HIS480</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>History of Christianity: birth and doctrines</b> | <b>3 cr.</b> |
| This course focuses on the inauguration of the New Alliance by Jesus, and the New testament which records the words and actions of this period. When Apostles proclaimed the good news by the kerygma it validated the evangelic mission of the Church, and from it, the first Christian communities were developed and organized. Their emergence caused different reactions and they were attacked by the upholders of Judaism and adherents of                                                                                                                                                                                                                                                                                                                                                                                                              |                                                     |              |

paganism. The course focuses on the dialectic of the integration of the Christians. The account of the genesis of Christianity is examined in this course along with the elaboration of the corpus of the first texts, and by minutely questioning the essence of the message that it brings to its understanding, its transmission, its evolution and its interpretation.

**HIS485 Islam: open questions: doctrines, institutions, rites, law, Sufism, brotherhood, western trends 2 cr.**  
This course presents the different theological interpretations and current legal issues, as well as examining the current myths about Islam, the brotherhoods and the different contemporary movements questing an ideal. Students will be studying the papers and the works of contemporary Muslim intellectuals throughout this course.

**HIS600 Research Methodology 3 cr.**  
Students will develop the practice of critical thinking and analytical approaches they have already applied in history and archeology, opening up the horizons of their research, so they can choose the form of their research paper or thesis. Students will include, alongside the research project, the necessary theoretical and practical knowledge to develop their thesis. Component parts of thesis writing will include: structuring the outline, dividing the content into chapters, and writing the introduction and conclusion in a coherent and rigorous way.

**HIS620 Social History: structure of the family in rural and urban areas 3 cr.**  
This course examines the family status in different areas and it detects the factors of change and durability. It is obvious that the situation of the family changes in Lebanon, but it is also well known that it remains at the base of society and is an element which gives the country its charm and stability.

**HIS625 History of International Relations (1918 – 2006) 3 cr.**  
This seminar covers the large context of international relations. It introduces these relations from the first colonial period to the implementation of strategies to secure and dominate the territory. The philosophical theories that preside over these relations will be discussed in class. The implementation of the supranational and super-states authorities of social, political, economic and military types, as well as their actions, will be studied. A study of the Arab world and the Mediterranean Sea are included, from the eve of World War I until the present day.

**HIS630 Art Critic 3 cr.**  
This course aims at teaching students how to develop a critical eye to define a work of art, analyze its characteristics, place the work of the artist in its correct time, and to know how to channel the information. The art critic explains, defends, objects, regulates, distinguishes and creates artistic movements, and these are the skills students can acquire on this course.

**HIS640 Thematic Research 6 cr.**  
This course studies problematic cases related to the history, art and archeology of Lebanon.

**HIS650 Seminary: Ancient Lebanon 3 cr.**  
Besides the theoretical and practical knowledge, this course includes field work experience in a multidisciplinary context.

**HIS655 Seminary: Medieval Lebanon 3 cr.**  
Students are introduced to the history of medieval Lebanon, a very important period which begins with the Arab-Muslim conquest of Lebanon in 636 and which ends in 1516 with the victory of the Ottomans over the Mamelukes. Students will become familiar in research using primary sources.

**HIS660 Seminary: Modern and Contemporary Lebanon 3 cr.**  
This course deals with extensive questions related to the history of modern and contemporary Lebanon, based on primary sources such as archives and manuscripts.

**HIS670A-B Thesis Project History 9 cr.**  
Graduates will have the ability to conduct thorough research, and master the use of sources and methods of writing a thesis.

**HIS710 Historiography 3 cr.**  
This course shows what really distinguishes history as a scientific discipline by giving equal consideration to both its theoretical foundations and to its practice. Students look at the historic genres which prevail in Europe and in America, and examine the historiographical trends which are apparent in Lebanon and in the bordering countries.

**HIS720 History of Contemporary Lebanon 3 cr.**  
This course approaches, in a critical and analytical way, the themes of Lebanese contemporary history since the establishment of the Emirate of Chehabs until the Doha Agreement. The content of the course is based mainly on primary sources: diplomatic documents, archives of various institutions, manuscripts, periodicals, memoirs, etc.

**HIS730 Civilization of the Near-east 3 cr.**  
This course studies political thought in the Arab world since the Renaissance period. It considers the papers of the first reformists, those of the contemporary Islamists and tries to reveal the causes of the conflict between the Shiites and the Sunnites in the context of the Arab Spring.

**HIS784 Social History 3 cr.**  
This course deals with several key issues in Lebanon, such as sustainable development, demography, labor and problems related to it, massive urbanization, emigration, the decline of political parties and the trades union, etc.

**HRG215-225 Harmony I A-B 1 cr.**  
Figured bass and given song: A. Realization of a given bass with 3-sound chords (root position, 1<sup>st</sup> and 2<sup>nd</sup> inversions); harmonization of a song given with 3 chord sounds (all positions). B. Modulations to the adjacent and distant tones, unisonal and modulating harmonic movements, figured bass and given song. C. Chords of the dominant 7<sup>th</sup>, with and without fundamental, regular and exceptional resolution: given bass and given song.

**HRG315-325 Harmony II A-B 1 cr.**  
Figured Bass.

A. - Chords of the Dominant 9th major and minor, with and without fundamental - Chords of the 7th in various species.

B. - Changes, delays and pedals.

C. - The foreign notes: changes, delays, pedals, notes of passage, anticipation, appoggiatura, etc.

**HRP330 Harmony III 3 cr.**

**Pre-requisites** MPR 201 Or MPR 205 Or MUP 259 Or MUP 261 Or HRP 220

Given chant. A. - Chords of the Dominant 9th major and minor, with and without fundamental - Chords of the 7th in various species. B. - Alteration, Delays and Pedals. C. - The foreign notes: alteration, delays, pedals, notes of passage, anticipation, appoggiatura etc.

**HRP440 Harmony IV 4 cr.**

**Pre-requisites** MPR 203 or MUP 459 or HRP 330

Harmonization in different styles: A. - Modal Harmony. B. -Jazz Harmony. C. - Harmony in different styles (from Baroque music to contemporary music).

**INF216 Introduction to Programming 3 cr.**

This course provides students with a practical method for resolving problems using the programming language Visual Basic. It covers: methods for problems analysis; an introduction to the Visual Basic language, basic concepts of the language, types, expressions, control structures (selection, repetition), one dimensional arrays, two dimensional arrays, strings, procedures and functions; and writing and executing programs.

**INF217** **Applicative Programming** **3 cr.**

**Prerequisites** INF216 Or INF214 Or INF219

This course introduces many techniques used to organize, search, sort and manipulate data, after completing new ideas in the Visual Basic language (multidimensional arrays, procedures, functions and files). It emphasizes sorting methods, recursion, linked lists, stacks and queues.

**INF304** **Informatics for Chemistry and Life and Earth Sciences** **3 cr.**

This course aims to familiarize students of chemistry, biochemistry and biology with the use of advanced software to provide models to illustrate their field of study. Topics include: advanced use of Excel and chemistry applications; tools for drawing molecules; processing molecules in 2D and 3D; introduction to cheminformatics, introduction to bioinformatics and molecular modeling; the structure of proteins (Protein Data Bank and pdb file); demonstration and use of PyMol; and sequence alignment using BioEdit.

**INS510** **Law and Ethics in Information Studies** **3**

This course looks into the moral and ethical values essential to information professionals, archivists and museum experts in situations involving legal debates and ethical issues. The course covers the following topics and issues: legal information; general principles of ethics; art and cultural property law; protection of movable and immovable assets; intellectual property and copyright; freedom of information and censorship; information theft and plagiarism; integrity and digitization; principles of negotiations and contracts.

**INS515** **Management of Libraries and Archives** **3**

This course is the study of effective and efficient management of organizations. It introduces management theory and decision making in the context of information agencies and services. Emphasis is placed on strategic planning and organizing, quality management, organizational behavior, human resource management, leadership and communication, management of change, legal issues in information agencies, and use of information in decision making.

**INS520** **Research Methodology** **3**

The course is designed to generate proposals for master's theses in information studies. It focuses on how to organize a research project, including the development of research questions, the review and synthesis prior to research and writing, and the understanding of the elements of a research proposal. Those include research problems and questions; critical appraisal of research literature; data sources and sampling; research ethics and integrity; and quantitative and qualitative statistics and analysis.

**INT550** **Consecutive Interpretation A-C I** **3 cr.**

The aim of the course is to teach note taking for texts in Arabic to be translated into English. The basics of note taking are taught at the beginning followed by texts read to the students with lengths ranging from 2 minutes to 5 minutes at the end of the semester.

**INT551** **Sight Translation A-B/B-A I** **3 cr.**

The on sight translation course given to first year students has three main objectives: To enrich their vocabulary. To work on the flow of the texts, the intonation, the articulation etc. To work on reformulating ideas, because interpreting essentially means explaining. The texts given to students revolve around current themes as well as more technical ones such as labor, sustainable development, international conventions etc. They are taken from websites; UN and other International Organizations. Texts are chosen gradually in terms of the gaps that the students need to address, in order to have a comprehensive training. At the end of the semester, students have to appear before a jury, in order to evaluate the process of the first half of the year.

**INT553** **Sight Translation A-C/C-A I** **3 cr.**

This course is given to reinforce the sense of translation among the students who will have to translate the text while reading it for the first time. This will teach them speed and precision and will prepare them for the simultaneous interpretation.

**INT554** **Consecutive Interpretation A-B I** **3 cr.**

This course introduces students to note taking techniques, in order to consecutively interpret texts from Arabic into French. The text lengths vary, starting with 2 minute texts and ending with texts up to 5 minutes, revolving around different themes: political, economic, and more general texts.

**INT555** **Consecutive Interpretation B-A I** **3 cr.**

This course introduces students to note taking. The professor will explain the note taking techniques (symbols, signs, etc.) and give theoretical introductions to the course that starts with 1 or 2 minute long texts for around 4 weeks. The length of the texts will increase as we go into the semester and will reach 5-6 minutes in December. Texts are taken initially from L'Orient-Le Jour and then the professor will choose more difficult texts from international French newspapers and magazines such as (Le Monde diplomatique), as well as other UN reports in French.

**INT556** **Consecutive Interpretation C-A I** **3 cr.**

Similarly to all the consecutive translation courses, this course will cover texts taken from the Daily Star in the beginning and will evolve to encompass texts from 'foreign affairs', "The Economist" as well as different reports from many UN agencies. It will focus on note taking at the beginning of the course and move toward a more tangible aspect of translation.

**INT557** **Sight Translation A-B/B-A II** **3 cr.**

This course teaches students to read a text and translate it at the same time; this exercise will serve as an introduction to simultaneous interpretation and will prepare students for different types of texts. General texts, at the beginning of the semester, lead to more specialized ones with a more complicated terminology.

**INT558** **Sight Translation A-C/C-A II** **3 cr.**

This course aims at enabling students to read a text and translate it on sight. This exercise will introduce them to simultaneous interpretation and prepare them for different kinds of texts ranging from general themes to more detailed and specific texts with specific terminology.

**INT559** **Consecutive Interpretation A-B II** **3 cr.**

At this stage, the students will have mastered note taking, and will concentrate on texts in Arabic to be translated into French. The text lengths vary between 5-6 minutes and they cover politics, economics and other current events.

**INT560** **Consecutive Interpretation B-A II** **3 cr.**

Students will be able to master consecutive interpretation of texts from French into Arabic. The degree of difficulty will be increasing the further they go into the semester and the students will tackle a variety of themes. As with all consecutive interpretation exercises, the students will have to master the connections within the texts and have to preserve the chronological order of the ideas.

**INT561** **Consecutive Interpretation C-A II** **3 cr.**

The second semester will allow the students to master translating consecutively texts from English into Arabic. The degree of difficulty will increase and with it the variety of the texts given to the students. The students will bear in mind the necessity of keeping the coordination between the various parts of the texts, as well as the chronological order.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                  |              |

| <b>INT563</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Consecutive Interpretation A-C II</b>         | <b>3 cr.</b> |
| The aim of this course is to teach interpreting students the techniques of consecutive interpretation. Students will be taught to listen to a 4 or 5 minute long speech in Arabic, to take note of what they heard, and then, based on the notes they have, translate the text into English. This course will teach students how to understand the logic of a given speech and be able to convey the same ideas and logic in English as accurately as possible and within a time frame not exceeding the duration of the original speech. Please note that the length and difficulty of the texts will increase as we progress through the semester and as students improve their oral expression skills and note taking techniques. The texts will be taken from a variety of sources, such as UN agencies and reports and Arab newspapers and magazines, and will cover different topics (economics, politics, international news, the environment, human rights, in addition to any other hot topics or current events as they arise). Material references: Annahar newspaper, Al Hayat newspaper, Al Biaa wal Tanmia magazine, Le Monde Diplomatique Arabe, etc. |                                                  |              |
| <b>INT600</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Simultaneous Interpretation A-C I</b>         | <b>3 cr.</b> |
| This first attempt at simultaneous interpretation puts the students in direct touch with the Booth. The students will start with memorization exercises and will start dividing their thinking between listening to the text and translating it. After one month, the students will be able to simultaneously translate any type of text from Arabic into English. The degree of difficulty will increase with time. The types of texts are generally taken from the UN organizations (FAO, ILO, UNESCO).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                  |              |
| <b>INT610</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Consecutive Interpretation A-B/B-A II</b>     | <b>3 cr.</b> |
| This course is given for the second year interpretation students. The students will have mastered note taking techniques and will be up to the task of consecutively translating all sorts of texts. They will be honing their already acquired skills.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                  |              |
| <b>INT611</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Consecutive Interpretation C-A III</b>        | <b>3 cr.</b> |
| In the 3rd semester of interpretation the students will have mastered note taking. They will continue with texts ranging from 6 to 7 minutes in length, while the instructor focuses on the chronological order of the ideas and the links between them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                  |              |
| <b>INT612</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Simultaneous Interpretation A-B I</b>         | <b>3 cr.</b> |
| This course introduces students to simultaneous interpretation. They will start with memorization techniques and try to divide their attention between listening and translating. The more they train, the more they will be able to follow the texts and concentrate on the nuances and the particularities of the different texts. This course will be based on translating texts from Arabic into French.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                  |              |
| <b>INT614</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Simultaneous Interpretation B-A I</b>         | <b>3 cr.</b> |
| This course introduces students to simultaneous interpretation. They will start with memorization techniques and will divide their attention between listening and translating. The more they train, the more they will be able to follow the texts and concentrate on the nuances and the particularities of different texts. This course will essentially cover texts from French into Arabic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                  |              |
| <b>INT615</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Simultaneous Interpretation C-A I</b>         | <b>3 cr.</b> |
| This course introduces the students to simultaneous interpretation. They will be introduced to the Booth, texts will be read to them, and they will start translating the texts at the same time that they are being read to. This ability follows 4 weeks of practice, including memory exercises, to master it. Texts are of a general nature at the beginning. Then we progress to the UN General Assembly before moving to the different UN organizations. By the end of the semester the students will have covered all the UN terminology.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                  |              |
| <b>INT616</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Consecutive Interpretation A-B/B-A IV</b>     | <b>3 cr.</b> |
| This course introduces students to simultaneous interpretation. They will work in the Booth and will translate texts read to them at the same time. This skill follows 4 weeks of intensive training that encompasses memorization exercises. In the beginning, the texts will be general, followed by texts and speeches from the UN General Assembly and other different organizations. The students will learn to deal with UN terminology from the beginning of the semester.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                  |              |
| <b>INT617</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Simultaneous Interpretation A-B II</b>        | <b>3 cr.</b> |
| After having been introduced to simultaneous interpretation for a semester, the students will have acquired more skills for the second semester, in order to deal with all sorts of texts. At this stage, other factors come into play: speed and precision. The texts are general (United Nations) from Arabic into French. The students will also listen to recorded speeches from the UN and other bodies. The difficulty at this stage will be with accents. Now the students can take part in actual conferences that take place within the University, as training. This will help them reinforce their skills and their performances so that they will be ready for work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                  |              |
| <b>INT618</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Simultaneous Interpretation B-A II</b>        | <b>3 cr.</b> |
| After having been introduced to simultaneous interpretation for a semester, the students will have acquired more skills for the second semester, in order to deal with all sorts of texts. At this stage, other factors come into play: speed and precision. The texts are general (United Nations) from French into Arabic. The students will also listen to recorded speeches from the UN and other bodies. The difficulty at this stage will be with accents. Now the students can take part in actual conferences that take place within the University as training. This will help them reinforce their skills and their performances so that they will be ready for work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                  |              |
| <b>INT619</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Simultaneous Interpretation C-A II</b>        | <b>3 cr.</b> |
| After introducing the students to simultaneous interpretation for a semester, they will become more competent in the second semester to deal with any types of texts. The skills are taught and now other factors come into play, such as speed, accuracy and precision. Texts vary from UN texts to more general texts. Also the students will be listening to recordings in different languages and accents and will be translating videos and PowerPoints. The students in this stage will have the opportunity to participate in any conference that takes place at the University as silent Booth, in order to reinforce their skills and improve their performance, for them to be ready for the labor market.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                  |              |

This course traces the history of each one of the five great media types (written press, radio, cinema, TV and internet) from the first loose-leaf in Europe, before written press, reaching Web 2.0. It overviews the greatest moments of this history on different levels (sociopolitical, cultural, economic, and technical).

| This course aims to develop the students' language skills by giving a detailed analysis of Arabic syntax via a dynamic approach using practical texts and exercises. This course also broadens the students' knowledge of Arabic language, both on oral and written levels, through exploration and analysis. Besides, it gives the student the opportunity to become acquainted with Arabic grammar and linguistic studies or references that will be needed while writing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                            |              |

| The course presents famous schools and authors who have established the most important theories in communication on individual and collective levels. It also seeks to provide students with the basic tools for a better understanding of the communication process, in theory and practice. RJCM 503 is a remedial equivalent course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                            |              |

| This course tackles Media and Communication Law, reviewing different official Lebanese texts. It also poses and analyzes ethical issues in journalism, alongside other media ethical codes. RJCM 505 is a remedial equivalent course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                            |              |
| <b>JCM317</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Media &amp; Current Events Coverage</b>                 | <b>3 cr.</b> |
| This course examines the media coverage of current events in the Arab region and around the globe. Students will be discussing and analyzing the reflected news and current events in the light of the roles of news media as an "indicator" and a "propagator" of the state of affairs. Subjects will be analyzed based on a comparative approach between different media types based on the historical context. Additionally, the course explores the backgrounds of media terminology (historical and ideological), helps students to prepare a relevant documentation on a subject for media coverage (focus on historical background to produce a neutral, objective, and professional press article) and provides many opportunities to develop critical thinking and analysis through the latest breaking news. By the end of the course, students will become informed and engaged citizens, able to distinguish between "Literacy through news" (informative texts), and news literacy (informative texts). |                                                            |              |

| With the Internet expansion, the world witnessed "new types of behavior" manifested through interactions and relationships between individuals (reading, interpreting data, etc.). Therefore, within a hyper-connected society, we become "creators" of our own data, but also readers of others'. Hence, we speak of "Data Journalism". This course discusses the notion of « information ecosystem» as a natural extension of "information system" (a formal, sociotechnical, organizational system designed to collect, process, store, and distribute information). Facing these compact, diversified, ramified and heterogeneous data on communication platforms, qualitative and quantitative analyses become a must, to study behaviors on the Web forming altogether the "Big Data".                                                                                                                                                                                                                         |                                                            |              |
| <b>JCM330</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Specialized Press</b>                                   | <b>3 cr.</b> |

The course focuses on the acquisition of the editorial skills and techniques for specialized journalists (newsworthiness, adaptation to the public, suitable media platforms for dissemination and outreach, etc.). The various lessons will shed light on the advantages and pitfalls of specialized journalism (economics, culture, fashion, sport, health, etc.).

| This course introduces precepts in socio-politics related to “plural societies” and “national identities” to understand and analyze challenges of communication interfaces in a globalized world, considering socio-political and socio-cultural factors. The program focuses on communication, persuasion, and rhetoric, which prepare students to analyze and to build political messages and discourses. It presents sociopolitical communication as an anticipation of political and social behaviors in permanent changing contexts, consisting in a set of strategies and tools, an academic field, and a political activity. Each session will be provided by theories, concrete case studies, and discussions, helping students in identifying the gap between the rhetoric and the reality on the ground. |                                                     |              |

| The course introduces the different divisions of a newsroom and teaches the students how to produce and prepare a news bulletin with relevant sections and subsections, running order... Additionally students receive extensive training to write diverse television news stories, and appropriate introductions for aired reports. The course starts with providing key terms and some samples taken from renowned television channels in Lebanon. The hands-on part is the essential constituent of the course, involving best practices for newsgathering processes and issue exploration for various news topics with special focus on language errors, misinterpretations, and misunderstandings.                                                                                                            |                                                     |              |
| <b>JCM440</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Media Techniques: Radio TV</b>                   | <b>3 cr.</b> |
| The course combines teaching news and reports writing for radio and TV, which is following the lead of digital media. Throughout the lessons, students will learn the components of the radio and television newscasts, along with essential grammatical notions to avoid language mistakes. The course also provides various ways to find reliable sources of information to elaborate a credible report that meets professional requirements. Furthermore, and based on diction lessons, future reporters and news anchors will be able to read scripts and present them in accordance with the different requirements of radio and television media.                                                                                                                                                            |                                                     |              |
| <b>JCM445</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Media Discourse&amp; Semiotics</b>               | <b>3 cr.</b> |
| Media are replete with expressions, stereotypes, patterns, interpretations, images, signs, graffiti, and caricatures that shape our perception, knowledge and understanding of the events. This course helps the students to decode and contextualize the media discourse to detect its underlying orientation. Considering that a text is an assemblage of signs that entails among others: words and images with reference to the conventions associated with a genre and in a particular medium of communication, the course initiates the students to understand and analyze the symbolic meaning of an image to discover its fundamental communicative purpose.                                                                                                                                               |                                                     |              |
| <b>JCM450</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Business &amp;Economic Reporting</b>             | <b>3 cr.</b> |
| The course delivers specialized instruction in the fundamentals of business, finance, and economics. Students will be able to track, record, analyze and interpret a wide spectrum of related articles. The lessons do not tackle the dense technicalities of advanced economics and statistics; instead, students will learn to interpret the data and write articles for a lay audience.                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                     |              |
| <b>JCM455</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Journalistic Writing</b>                         | <b>3 cr.</b> |
| The course teaches the hallmarks of journalistic writing along with the basic techniques to write simple, compound, and complex new items. The hands-on experience will train students to be more selective with terms and avoid common errors, highlighting some basic Arabic grammar notions. Furthermore, considering the major role of Press Agencies as a news supplier, students will learn to use news efficiently, to write articles and reports with compatible titles for newspaper and digital media formats. Additionally, the various topics will incentivize the future journalists to widen their horizons, while constantly seeking to develop their knowledge with useful information and enrich their backgrounds with updated information on a wide range of topics.                            |                                                     |              |
| <b>JCM460</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Professional Internship</b>                      | <b>3 cr.</b> |
| This course is designed to mentor the students during a professional training of 45 hours in a media organization (newspaper, magazine, TV, radio, or digital media). The internship experience will provide them with an important knowhow that may only be gained through experience and on-the-job training. At the end of the internship period, students are requested to submit a report to summarize their experience and shed light on their acquired learning outcomes and professional skills.                                                                                                                                                                                                                                                                                                           |                                                     |              |
| <b>JCM515</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Media and Public Opinion</b>                     | <b>2 cr.</b> |
| This course highlights the methods used by media to influence public opinion and vice versa. It also tackles the concept of “event” within media (criteria to report an event, impact, situation, interpretation, main differences between a journalist and historian in event reporting).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                     |              |

| This course discusses different texts with respect to press freedom, as guarantors of individual and group freedoms. It reviews the factors affecting press liberties, elaborating on the relationship between press independence, politics and finance. The course also examines different ways to ensure respect of this freedom, as well as the professional code and ethics in journalism.                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                     |              |

| The objective of this course is to understand and analyze social phenomena in relation to political power and control. In terms of taking or retaining power, by or for different stakeholders, it is more and more essential to resort to different techniques of communication and public conditioning in political practice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                     |              |
| <b>JCM524</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Economics and Media Management</b>               | <b>2 cr.</b> |
| This course examines the role and impact of the media in economy, with a main focus on different aspects required to operate a media company.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                     |              |
| <b>JCM610</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Strategies and Tools of Public Communication</b> | <b>2 cr.</b> |
| This course examines adequate techniques and methods to be used, in order to implement a communication strategy with optimum results. As there are multiple communication tools, this course offers a theoretical approach, followed by practical applications allowing a better mastery of the techniques.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                     |              |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                             |              |

| This course develops various types of communication used between countries in diplomacy and politics, from the United Nations to the European Union and the Arab League. Students will be able to understand the role of the State, and bilateral relationships between States. The course provides explanations about various existing international organizations (role, structure, relationship with these organizations).                                                                                                                                                                                                 |                                                             |              |
| <b>JCM620</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Multicultural Communication</b>                          | <b>2 cr.</b> |
| This course explores consubstantial relationships between communication and culture. As an important and essential element of the communication act, cultures live, perpetuate and renew themselves through communication. The course introduces communication semiotics, and invites students to analyze the mechanisms of intercultural communication.                                                                                                                                                                                                                                                                      |                                                             |              |
| <b>JCM621</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Thematic Seminars</b>                                    | <b>2 cr.</b> |
| The course is a cycle of seminars, involving qualified professionals and specialists from other fields, who will explain the real needs of the market, alongside the available media means to meet these needs.                                                                                                                                                                                                                                                                                                                                                                                                               |                                                             |              |

| This course is based on a one month traineeship in a press office, company or advertising agency. During traineeship, students will become familiar with the different services and posts, before selecting a certain job. On completion, they will submit a report summarizing their performed tasks and experience.                                                                                                                                                                                                                                                                                                         |                                                             |              |

| After completion of the MA courses, students are required to prepare and submit an independently researched dissertation, under the close supervision of a department professor or expert of the field. They should conduct their own original research and write a dissertation of approximately 150 pages in length, on a chosen theme or issue relating to journalism and communication.                                                                                                                                                                                                                                   |                                                             |              |

| This course examines the principles, processes, issues and best practices for developing and maintaining library and information center collections. It studies the methods for identifying the needs of a user community, designing a collection policy, selecting and acquiring library materials in all formats, making decisions related to a collection's management and preservation, and evaluating the quality and appropriateness of an existing collection.                                                                                                                                                         |                                                             |              |
| <b>LIBR610</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Information Sources and Services</b>                     | <b>3</b>     |
| An introduction to concepts and processes relating to reference and information science. An overview of the reference function includes the history and future trends of reference service, question negotiation, information needs analysis, effective research strategies, evaluation of information sources in various formats, and ethics of information services.                                                                                                                                                                                                                                                        |                                                             |              |

| This course deals with the principles for the design, selection, implementation, and management of automated systems for all types of libraries, including systems for technical services, processing, reference and user's services. It provides the students with a sound understanding of how libraries apply technology to deliver information. It also describes several open source integrated library systems (ILS) and other proprietary ILS.                                                                                                                                                                         |                                                             |              |
| <b>LIBR620</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Digital Libraries</b>                                    | <b>3</b>     |
| A theoretical study of planning, designing, constructing and evaluating digital libraries, as well as an opportunity to practice. This course covers the requirements, components and technologies of digital library systems, follows the evolution of digital libraries and explores the trends influencing their structure and development.                                                                                                                                                                                                                                                                                |                                                             |              |
| <b>LIBR625</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Rare Books and Special Collections</b>                   | <b>3</b>     |
| A practical introduction to the field of rare books and special collections, as well as codicology and manuscript cataloging. This course provides students with a definition of rare books and special collections, presents the different types of materials housed in special collections, and discusses what being a rare book and special collections librarian entails. It also covers the study of Syriac and Arabic manuscripts from different places and periods, written in different hands, in order to gain a basic knowledge in how to read and to some degree date and geographically locate these manuscripts. |                                                             |              |
| <b>LIBR630</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Informetrics</b>                                         | <b>3</b>     |
| An introduction to the study of the quantitative aspects of information, including the production, dissemination, and use of all forms of information, and encompassing the following fields: bibliometrics, which studies quantitative aspects of recorded information; altmetrics, which is concerned with non-traditional metrics that have been proposed as an alternative to the more traditional citation impact metrics; scientometrics, which studies quantitative aspects of science; and webometrics, which studies quantitative aspects of the World Wide Web.                                                     |                                                             |              |
| <b>LFR201</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Advanced French Language Course</b>                      | <b>3 cr.</b> |
| <b>Prerequisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | LFR120                                                      |              |
| This course enables students to master all grammatical functions and to manipulate the different types of clauses: independent, main and subordinate. The overall method adopted is inductive and the approach is that of text grammar.                                                                                                                                                                                                                                                                                                                                                                                       |                                                             |              |
| <b>LFR205</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Modern Cultural Issues in French</b>                     | <b>3 cr.</b> |
| The main objective of the course is to educate future translators in the major political, economic and social contemporary developments, comprehended in their philosophical, historical and human dimensions. It also aims to create in students the habit of reading the world press (French in particular) to familiarize them with the analysis styles used and to think critically.                                                                                                                                                                                                                                      |                                                             |              |
| <b>LFR211</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Textual Analysis</b>                                     | <b>3 cr.</b> |
| The course defines specific concepts and methods related to the literariness of a text: fiction, mimesis, figures, versification, etc., and introduces students to the analysis of writing techniques involved in various genres and types of texts. This course represents an introduction to critical approaches which will be elaborated on later in targeted courses.                                                                                                                                                                                                                                                     |                                                             |              |
| <b>LFR212</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Commentary</b>                                           | <b>3 cr.</b> |
| This course is designed to help students acquire writing techniques to develop both French literary exercises: <i>Commentaire composé</i> and <i>dissertation</i> as per the Official French Curricula.                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                             |              |

This course teaches students the necessary skills needed for analyzing literary texts and writing whole dissertations and gives students the opportunity to enhance their writing abilities. The theory will be given based on analysis of texts from several periods and genres.

**LFR216 Techniques of Expression in French 3 cr.**

This course initiates students to analyze different kinds of oral or written texts through communication, enunciation, semantics, narration and argumentation theories. It also develops formal and stylistic specificities peculiar to each type of speech and leads students to analyze and produce different types of texts. It helps students to consider, later on, in their translations the communication strategies and other types of speech due to their identification and analysis in this course.

**LFR220 History of French Literature I (from the 18th to the 20th century) 3 cr.**

Literary history (18th, 19th and 20th century) invites students to re-explore the French literature of modern times through its main authors and movements. It uses mainly the diachronic approach which enables students to relocate a work within a broad literary movement, to identify the specificities of expression modes related to an era or to a literary genre, and to understand the conveyed literary sensibilities.

**LFR221 Literature, Culture and Society 3 cr.**

This course aims to shed light on the relationship between society and literary production by relying on the historical and political context of a specific era. The chosen time is the 1950s, a period shaken by the two World Wars whose influence is particularly seen in writings that fall within the dramatic genre.

**LFR224 Elements of Linguistics 3 cr.**

Based on texts written by the founders of the discipline, this course will introduce students to the history of linguistics and the main linguistic concepts and theories developed to date, in order to familiarize them with the various fields of the application of linguistics. This introduction will be followed by a study of the French phonetic and phonological systems: synchronic study of sounds, articulatory and combinatorial phonetic transcription, and the phonological approach to French (articulation points and modes of phonemes, minimal pairs, distinctive features, etc.). It will be followed by the study of phonetic evolution.

**LFR310 Francophone Literatures and Cultures 3 cr.**

This course aims to examine the expansion of Francophonie based on two problem issues: the first one deals with the relationship between history, politics and literature; while the second deals with the link between the francophone writer and the French language. The issues will be examined using a grouping of texts taken from the most representative books of Francophonie.

**LFR316 French Morphology and Syntax 3 cr.**

**Prerequisites** LFR201

This course is about lexicology which is divided in two branches: lexical semantics and lexical morphology. We will first define lexicology, word and lexicon. Then, we will explain Saussure's theories about the sign, the different kinds of definitions and semantic relations. In Morphology, we will treat words' formation (derivation, composition, etc.).

**LFR322 Novels, texts and representation 3 cr.**

This course briefly retraces the Napoleonian's epic in order to show its influence on the 19th century literature. This myth, which has influenced the collectivity's imaginary, will be studied through three integral works. We will also analyze some excerpts from another writings. At the end, we will deduce some constants about this myth's perception as well as some major differences.

**LFR409 Topics in French Literature 3 cr.**

This course will successively shed light on the structural and narrative characteristics, as well as the thematic constants of the fairy tales and fantasy through a corpus of short stories and stories that reveal the evolution of both genres between the 17th and the 20th century.

**LFR411 Latin Language and Civilization 3 cr.**

Accessing a second level of learning Latin clearly requires a preliminary initiation. This course will first endeavor to summarize and deepen certain language skills, then complete this first level with an indispensable civilizational supplement. To this end, the implementation of a teaching method alternating between language and civilization will offer students the opportunity to rediscover the heritage that founded the French language and thinking.

**LFR420 Literary Readings 3 cr.**

**Prerequisites** LFR314

This course is designed to study the work of Jean Cocteau, a marginal author whose pluralistic work played a leading role in 20th century literature. Novels, poetry, theater, cinema, music and painting are all areas that were explored by this unique author.

**LFR423 Linguistics of Enunciation 3 cr.**

**Pre-requisites** LFR224

This course aims to introduce students to the theory of articulation. After locating articulation in the field of linguistics, the course will familiarize them with the components of indexical deixis, with the characteristics, particularly the verbal ones, of the articulation plans and with the different forms of the enunciative heterogeneity. The presentation of each notion will be followed by a relevant observation, analysis and interpretation in the selected literary texts.

**LFR430 Literary Criticism 3 cr.**

Initiation to the structuralist-narratological approach of a text using the method of Gérard Genette.

**LFR520 Culture and Modern Civilization Seminar 2 cr.**

This course deals with the analysis of what makes the unity of a culture and differentiates it from others. It is based on the theories of Margaret Mead and de Bruno Latour who are concerned with how individuals receive their culture and integrate it within their personal development. Based on the study of exemplar stations of French culture that range from the Golden Age, through the Roaring Twenties, the period between the two World Wars, May 68, the Women's Liberation Movement and the French theory (Derrida, Barthes, Guattari, Bourdieu), we will challenge the biases rooted in attitudes, and we will study using literary texts the difference between men and women in French society according to the psychosocial context, besides studying gestures and corporeality related to each gender. We will also focus on the movement of ideas at the end of the 20th century in interaction with the cultural totality.

**LFR521 French Literature Seminar I 3 cr.**

This course proposes a philosophical approach to literary texts of 20th century authors, placing the literary work at the intersection of the concerns and aspirations of a group and/or an individual. Hence, students deal with another phase of the pluralistic reading of a literary work showing the intersection of this writing within a multidimensional space-time framework, placing the work at the crossroad of a convergence of thoughts rooted in a particular era, while transcending it; however, these works remain literary in the first place regardless of the genre used.

**LFR522 French Literature Seminar II 3 cr.**

This course is designed to teach the Freudian and Jungian schools to the students of the Masters in French Language and Literature, as well as their application to literary texts as critical approaches of the sub-textual discourse, or in other words the unconscious of the text.

**LFR524 French Linguistic Seminar I 3 cr.**  
The course consists of two parts. The first is devoted to a review of linguistic and stylistic concepts. The second deals with the application of concepts to poems taken from two collections: Les Fleurs du mal by Baudelaire, and Liban: Vingt poèmes pour un amour and Archives sentimentales d'une guerre au Liban by Nadia Tuani, in order to write a stylistic review of a poem.

**LFR525 French Linguistic Seminar II 3 cr.**  
This seminar aims to remind students of the stylistic guidelines and help them to apply these concepts to a specific corpus. The selected corpus is a collection of monologues taken from works that belong to the period from the 17th to the 21st century.

**LFR526 Seminar: Theater 3 cr.**  
The course focuses on the evolution of the genre. A diachronic vision attempts to trace the sources of Greek tragedy, to show the future of dealing with the tragic themes, the appearance of comedy and the creation of the tragicomic genre. The corpus is rich: the syllabus includes Aeschylus, Euripides and Sophocles, Plautus, Adam de la Halle, Monléon Robert Garnier, Tirso de Molina, Shakespeare and Calderón. The seminar, refraining from an artificial thematic repartition, will dwell on many areas of interference before examining the preparations for classical drama.

**LFR610 Seminar: Comparative Literature 3 cr.**  
The course consists of three parts. The first part reviews the Oedipus myth, the ancient and the classical tragedy. The second part focuses on a comparative study of a Greek tragedy, The Phoenician Women by Euripides and two classical tragedies, The Thebais by Racine and Oedipus by Corneille. The third part is devoted to an introduction to myth criticism.

**LFR612 Seminar: General Linguistics 3 cr.**  
The objective of this seminar is to review issues related to language and gender; exploring female and male dialects by presenting them in their most representative aspects at many levels relating to phonology, syntax, morphology and multiple contingencies that govern every utterance. The language in question is not only verbal but also gestural. In this brief overview, we rely on the course of general linguistics by Ferdinand de Saussure. We then propose outlining a new question in terms of linguistics of sexual difference by referring to contemporary linguists: Lakoff, Verena Aebischer and Anne-Marie Houdebine.

**LFR621 Seminar: French or Francophone Literature 2 cr.**  
The course is dedicated to a hermeneutic reading designed to teach students the decryption of sacred symbols, as well as the application of philosophical and religious concepts to literary texts, presenting the rationale of evil (the pact with the devil, metamorphosis and inversion) and good (the quest of the Self, the quest of God and angelism).

**LFR623 Seminar: Pragmatics 2 cr.**  
This seminar aims to introduce pragmatics as a linguistic discipline. The various pragmatic theories which help examine the functioning of words in situations will be introduced, in addition to the extra-linguistic processes for the production and interpretation of meaning. These theories will be applied to extracts of theater, a dramatic genre presenting many similarities with authentic conversations, the real object of interest of pragmatics.

**LFR690A Master Dissertation 6 cr.**

**LIT225 The Liturgy, Expression of Faith 3 cr.**  
This is a course that analyzes and comments on the famous saying: Lex Orandi, Lex credendi, "the law of prayer is the law of faith", and offers a preliminary explanation of the meaning of "liturgy" that will be followed by three illustrations of the saying.

**LIT203 The Liturgical Assembly, Incarnation of the Church 2 cr.**  
This course focuses on the liturgical assembly, and how liturgy celebrates the faith of an assembly as it was the case for the first Christian communities. To the extent that the assembly is "liturgical" and alive, its liturgy will be meaningful and will be the "incarnation of the Church". The celebration of the paschal mystery opens to communion and sharing, and makes the sanctifying Spirit active in the lives of Christians. There is, therefore, a logical sequence between the paschal mystery, Christian worship, liturgical assembly and Christian life leading to the incarnation of the Church.

**LIT220 The Divine Office of the First Five Centuries 3 cr.**  
This course will consider the liturgical aspects of Divine Office of the first five centuries and students will try to develop the wide-ranging evolution of the office. The course highlights the contribution from the Jewish heritage and the Christian meaning of the Hours.

**LIT207 Conciliar Constitutions = SL 2 cr.**  
This course examines the Vatican Constitution II on the Liturgy, which does not present itself as a dogmatic text but rather as a document of a pastoral nature. Its primary purpose is not to draw a theology of the liturgy, but to direct the restoration and the progress of liturgy with authority.

**LIT301 Liturgical Year and Calendar 3 cr.**  
This study examines the different concepts of time and of multiple dimensions. It seeks to write the history of the origins of the calendar, in general, and particularly of the Hebrew one, which was the basis of the Christian calendar. This study presents the liturgical year in each Eastern rite, its structure, characteristics and spirituality.

**LIT302 Cycle of Holy Week 3 cr.**  
The objective of this course is to pursue the scientific research of students through the biblical and patristic sources and through the offices and the celebrations of Holy Week, to create awareness of the importance of this Holy Week, the summit of the liturgical year (SL 102, 111).

**LIT315 Sacrament of Marriage 3 cr.**  
God has established marriage by "creating man and woman" that owes nothing to the state or to the Church. It is a natural institution called "customary marriage": a union based on marriage and family more than on formalities. Even for the chosen people, marriage is an earthly reality. The Church, in turn, believes that "marriage has God as its author. It was from the beginning as a figure of the Incarnation of the Word of God". The Vatican does not diverge from this biblical vision. This course examines the development of the celebration of marriage throughout history.

**LIT305 Mass in the East and Theology of Anaphora 3 cr.**  
The course is presented through a liturgical, historical and theological perspective. The first part considers the historical and liturgical development of the parts of the Mass, through the various Eastern liturgies, and distinguishes between the Antiochian and the Alexandrian structure. The main parts of the Mass will be detailed. A major importance will be given to the anaphora.

**LIT306 Maronite and Syriac Jacobite Office 2 cr.**  
This course highlights an important part of the Maronite and Syriac Jacobite liturgy, neglected or forgotten to some extent. It describes, in light of recent and critical research, the structure and theology of the different Hours of the office, and guides students towards an objective understanding of the liturgical reform of the Maronite office.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                     |              |

| <b>LIT308</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Introduction to the Armenian Liturgy</b>         | <b>2 cr.</b> |
| The different Christian communities of Lebanon have different liturgies. This diversity is in itself an invaluable asset for this small country with a substantial Christian population. The source of this diversity of liturgies in the Church is attributed to the inspiration of the Holy Spirit that, on the day of Pentecost, gave the apostles the ability to tell diverse liturgies in several of languages to the Church. All these existing liturgies in Lebanon (Antiochian, Byzantine, Catholic, Orthodox, etc.) have their origins outside Lebanon. The case is the same for the Armenian liturgy created in the distant Armenia.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                     |              |
| <b>LIT309</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Audiovisual in the Service of Liturgy</b>        | <b>2 cr.</b> |
| Assaulted by media, attacked by images, deafened by sounds, we are still free to choose, are we still free to act and communicate? How to communicate? How to be understood? Does communication have any principles? What are its principles? According to which models of communication did Jesus communicate?<br>Does the multimedia civilization allow us to celebrate Jesus Christ and to offer our faith? How to celebrate Jesus Christ in the multimedia era?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                     |              |
| <b>LIT310</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>The Ritual in the Eastern Liturgies</b>          | <b>2 cr.</b> |
| In all the subjects taught at the Institute of Liturgy, there are many courses which try to encompass several liturgical disciplines: the Mass, the Divine Office, the liturgical year, and so on. A course on the book of the Ritual was lacking. This book is of paramount importance because it is the priest's book, and the faithful participate in most of its ceremonies. This is why the liturgical, theological and spiritual study of the Ritual is essential since this book contains various important rites or ceremonies: First, it contains the rites (or ordos) of the sacraments: Baptism, coronation, penance, 'Anointing of the sick. We find the rites of the Holy Week, of the Great Sunday of the Resurrection, of the genuflection at Pentecost; we find, in the same way, various blessings: on the children, on the mother who gave birth, on the newborns, etc. This course shows the importance of this liturgical book in the various oriental liturgies. Our aim is to familiarize the students with this one, in the various liturgical families: Maronite, Syrian, Chaldean, Byzantine, etc. |                                                     |              |
| <b>LIT410</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Epiphany Cycle and Christmas</b>                 | <b>3 cr.</b> |
| The objective of this course is to discover the two liturgical cycles of Christmas and Epiphany. It should answer the fundamental question: What is the connection between the Epiphany, manifestation of the Lord, and Christmas?<br>The goal is to guide students in theological liturgical scientific research around these two liturgical rites, Christmas and Epiphany.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                     |              |
| <b>LIT403</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Office of the Dead</b>                           | <b>2 cr.</b> |
| The mystery of death remains an impenetrable subject in many traditions and cultures. But with Christianity, it has become more obvious; it is a sign of hope provided that the texts of the funeral service reflect the truth of the Resurrection of Christ.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                     |              |
| <b>LIT404</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Byzantine Office</b>                             | <b>2 cr.</b> |
| This course will consider the Byzantine office from several angles: legal, theological and liturgical. Emphasis will be given to the liturgical aspect that consists of advancing the wide-ranging evolution of the Byzantine office and its development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                     |              |
| <b>LIT405</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Impact of the Monastic Life on Liturgy</b>       | <b>3 cr.</b> |
| If the liturgy is the work of God celebrated in the ecclesial communities, it is still engaged in a well-defined historical and geographical environment. Students will examine the content of liturgical prayer celebrated by the monks of the early centuries as an expression of the multiple wisdom of God. This liturgical-monastic aspect affirms the conjunction of the divine mystery and its symbol to reach the peaks of union with God.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                     |              |
| <b>LIT406</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Liturgical Symbolism</b>                         | <b>2 cr.</b> |
| The essence of religion is to be found in the intersection of the symbolic and the sacred, and the essence of the symbol is to look within the liturgy; because man and symbol meet and interact in a prayer and in a liturgical action.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                     |              |

| Liturgy is both science and celebration. The practical side is an integral part of this science. In other words, the liturgy can be a science of the liturgy only through this transition from theory to live experience and from science to the celebration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                     |              |

| The course is a true introduction and a practical guide to understanding spirituality in general and its relationship with the liturgy. We intend, through this course, to bond spirituality with science; because beyond all, the life lived concretely and individually is the one we tend to lead to science to reach a desired spirituality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                     |              |

| This course will provide an introduction to the discipline of linguistics. It focuses on the fundamental concepts, the basic goals and the methods of modern theoretical linguistics. It introduces students to linguistics through the writings of well-known linguists, such as, but not limited to, Ferdinand De Saussure, Bloomfield, André Martinet, Roman Jakobson, and Noam Chomsky. By the end of the course the students will be familiar with some of the terminology and techniques of linguistic analysis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                     |              |

| The focus of the course is on modern drama, and poetry arts such as instructive topic, wisdom, and lyrics. The course aims at helping students gain awareness in the cultural experience of modern drama and topic poetry. It familiarizes students with literary movements such as naturalism, symbolism, realism, and other dramatic features.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                     |              |

| The course covers, in introduction, the civilization and the literature of the Pre-Islamic epoch. It helps students to recognize various topics such as glory poetry, chivalry, wisdom, speech, and enthusiasm. Then the course covers the civilization and the literature of the Early Islamic and Umayyad Era. This course aims to distinguish between the development of poetry and prose in this period, and to describe the different methods and characteristics of Early Islamic and Umayyad literature such as Islamic poetry, Umayyad speech, and epistles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                     |              |
| <b>LLA315</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Novel and Theater</b>                            | <b>3 cr.</b> |
| This course aims to offer students a detailed study of the development of the 20th century novel as an outcome and reaction to the 19th century novel. The course gives special attention to some of the major Arabic novelists, such as Najib Mahfouze, Toufic Youssef Awad, and Amine Maalouf. This course offers both a historical survey and a literary history of the development of drama. It concentrates on critical analysis of the distinguishing features of the different genres and sub-genres in drama, tragedy, comedy, and tragicomedy. This course gives special attention to the major Lebanese theater, such as the Rahbany brothers, Shoushou, Nabih Abu El Husn, and George Khabbaz (modern theatre).                                                                                                                                                                                                                                                                                                                                                                                                  |                                                     |              |

|                      | This course aims to help students acquire the basic rules of Arabic morphology and syntax (from the perspective of functional grammar). It will enable them to produce a grammatically correct text. The method adopted uses a text or a series of typical examples, from which the students derive the rule, acquire it and apply it appropriately.                                                                                                                                                                                                                                                                                                                 |              |
| <b>LLA323</b>        | <b>Literature in the Mamluk and Ottoman Era</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>2 cr.</b> |
|                      | In this course, the students learn about the developments of the Islamic world during the period of Mamluk and Ottoman colonial domination and its aftermath, with special attention to the works of leading authors. In Mamluk literature: Al Boussayri, Saffieh Al Dinn, Ibn Nabata, Ibn Manzour (lissan Al Arab), Salah Al dinn Al safady (Alwafi bel Waffiatt), and Al KalKashindi (Sobeh Al Ashaa). From the Ottoman literature: Ibn Al Nakib, Ibn Maatuk, Nicola Al Turk, Boutros Karame, and Bader Al dinn Alghozzi.                                                                                                                                          |              |
| <b>LLA324</b>        | <b>Literature in the Renaissance Era</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>3 cr.</b> |
|                      | This course introduces students to Renaissance literature by studying the history of this period and the famous authors and poets who changed the structure of literary texts. This course aims to consider many poetry texts, and to study the influence of printing, and of journalism, the pedagogic foundation which left their effects on Arabic modern literature. The students will be looking at important poets and writers, such as Ahmad Amine, Gergi Zayden, Joubran Khalil Goubran, Micheal Nouayme, and others, and they will study the characteristics of literary production in the light of new methods of modern criticism.                        |              |
| <b>LLA325</b>        | <b>Literature in the Andalusian Era</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>2 cr.</b> |
|                      | In this course, the students study the prose and the poetry of Andalusian literature. They will study literary genres in order to interpret, analyze, and critically evaluate selections. Poetry topics: nostalgia, nature, terza rima (mouwashah). Poets: Ibn Zaydun, Ibn Khafaja, Ibn Zumrok, Wallada bent Al Mustakfi. Prose topics: Maqama, biography, speech, the short novel, Diwan writing. Writers: Ibn Abd Rabboh, Ibn Tufayl, Ibn Shahid. The students will also learn about the Andalusian civilization, aspects such as religions, languages, the role of women, culture, and society.                                                                   |              |
| <b>LLA326</b>        | <b>Overseas Arabic Literature</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>2 cr.</b> |
|                      | This course is an introduction to the major literary movements of overseas writers, starting with Gebran Khalil Gebran, M. Nouayme, R. Ayoub, N. Arida, among others. The course traces the major development of Arabic literature overseas, and helps students to investigate the themes and the characteristics of this literature.                                                                                                                                                                                                                                                                                                                                |              |
| <b>LLA411</b>        | <b>Comparative Literature</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>3 cr.</b> |
|                      | This course investigates the nature and scope of comparative literary studies, focusing on the nature and assumptions of literary study undertaken from several comparative perspectives. It is designed to equip students with the tools necessary to critically analyze texts in light of other texts.                                                                                                                                                                                                                                                                                                                                                             |              |
| <b>LLA412</b>        | <b>Arabic Linguistics Problems</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>2 cr.</b> |
| <b>Prerequisites</b> | LLA212                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |              |
|                      | This course is a continuation of LLA212. It stresses the importance of linguistic evidence in understanding grammatical correctness. Focusing on the acquisition of basic vocabulary and grammatical structures, it helps students explore, in depth, the principles of word formation, derivation, and inflection, and simultaneously provides an overview of the major syntactic constructions of Arabic.                                                                                                                                                                                                                                                          |              |
| <b>LLA435</b>        | <b>Modern and Contemporary Arabic Criticism</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>3 cr.</b> |
|                      | The course prepares students to study, evaluate, and interpret the Arabic literature texts. It will help students to recognize the different methods to criticize the literary text by using the logic interpretation and constant evaluation. The course aims at enabling students to practice how to use different theories, how to read literature, and how to relate literary theory to the cultural background.                                                                                                                                                                                                                                                 |              |
| <b>LLA415</b>        | <b>Lebanese Popular Heritage</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>2 cr.</b> |
|                      | This course presents the Lebanese popular language and its importance, its Aramaic origins, and the interest of its study for Westerns. It defines the rules and meters of Lebanese folk poetry, the Zajal (its different genres, its pioneers, along with its modern and contemporary troops), the Muwassah, al- Ataba, al-Mijana.                                                                                                                                                                                                                                                                                                                                  |              |
| <b>LLA423</b>        | <b>Modern and Contemporary Arabic Literature</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>2 cr.</b> |
|                      | This course presents the modern Arabic literature of prose and poetry. It defines modernity and its general characteristics: the literary genres (novel, play, biography, literary research). It presents the contemporary Arabic literature and its universal dimensions: the Arabic novel, its principles and general rules, the movements that it illustrates, and its methods. At the poetry level, the course defines the concepts of modern, new and contemporary. It reviews the history of modern poetry: its beginnings, its pioneers, its stands, its directions, as well as its various forms of prose, poems, and poems subject to the rules of prosody. |              |
| <b>LLA511</b>        | <b>Seminar: Literature I</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>3 cr.</b> |
|                      | The aim of the course is to define the features of major literary genres: poetry, prose, and drama. The design of the course involves the explanation and modes of analysis of the different types of each genre. It focuses on contemporary authors and on current fields of interaction between arts, sciences and literature.                                                                                                                                                                                                                                                                                                                                     |              |

|                      | The aim of this course is to make the students aware of the importance of studying linguistics theory in order to be acquainted with the grammatical efforts of former Arab grammarians (al khaliil bin Ahmad, Sibawaih Ibn Jinny) who analyzed, in their books, the Arabic language through a scientific methodology which does not differ from the linguistic methodology adopted by the generative and transformational grammar. Topics include, but are not limited to, the grammaticality of sentences, the definition of human language, the linguistic competence, and the nominal phrase.                                                                    |              |
| <b>LLA520</b>        | <b>Seminar: Contemporary Culture and Civilization</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>2 cr.</b> |
|                      | This seminar aims, through a diachronic approach, and starting from the relationship between thought, language and civilization, to shed light on the great trends, movements and schools which have marked, with the passing centuries, Arabic society and culture, and this from within literary texts and founding documents.                                                                                                                                                                                                                                                                                                                                     |              |
| <b>LLA521</b>        | <b>World Literature</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>3 cr.</b> |
|                      | This course introduces students to the diverse genres of international literature and to masterworks produced by Arabic authors. It will help students to read, analyze, and research diverse and significant literary texts. Genres studied include fiction (novels and short stories), drama, comedy, lyrical literature, imagined story, speech, poetry and prose.                                                                                                                                                                                                                                                                                                |              |
| <b>LLA522</b>        | <b>Textual Approaches</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>3 cr.</b> |

This course aims to help students to approach the literary texts, understanding them by using the modern criticism, studying the form of texts, structure, linguistic style, and evaluating them as performance text meant for production. Students will research and study literary elements of narrative forms, and storytelling traditions of different cultures.

**LLA523 Seminar: Modern Theater 3 cr.**

The seminar focuses on the esthetics of drama and distinguishes between modern and contemporary drama writing and classical drama poetics. It analyzes Lebanese and Arab theater from pragmatic and intercultural perspectives.

**LLA610 Seminar: Arabic Literature II 3 cr.**

The aim of the seminar is to define the features of major literary genres: poetry, prose, and drama. The design of the course involves the explanation and modes of analysis of the different types of each genre.

**LLA612 Seminar: Arabic Linguistics II 3 cr.**

This seminar introduces students to the fields of applied linguistics. It explores how children from infancy to the early school years learn their first language and presents an overview of psychological research and theory on language acquisition. It also covers applications of various branches of linguistics to the methods and approaches of teaching Arabic language.

**LLA621 Seminar: Comparative Literature 2 cr.**

This seminar will acquaint the students with basic methods and concepts of criticism through close reading of key texts (lyric poetry, drama, short fiction) by major authors. It will offer the students the chance to investigate what constitutes the field of comparative literature. They will trace the history of the discipline and explore traditional as well as recent areas of research, such as interdisciplinarity and global and multicultural comparativism. Students will investigate how to more fluently cross the boundaries of disciplines and national literatures. The course involves a thorough reading and understanding of the background, history, and literature associated with world literatures.

**LLA623 Seminar: Civilization and Literature Topics 2 cr.**

The course is designed to focus on major issues in literature, such as gender, racial, ethnic, religious, political, colonial and postcolonial culture and multiculture. This course aims to raise the students' awareness of the inter-relationship between literature and society in all of its facets.

**LLA690A Master Dissertation 6 cr.**

The dissertation, which consists of 100 to 150 pages, crowns the completion of the Master's degree by elaborating upon an Arabic literature subject. Students will learn to manage the difficulties of writing a scientific work supported by appropriate research and one that is presented in a rigorous and clear manner. Through the dissertation, the students must successfully prove that they master the components of the methodology required to achieve a scientific work, and that they are able to analyze, argue, illustrate, and defend a thesis, as well as validate a problem, relying on strong and authentic documents and bibliographic references.

**LLA700 Seminar: Scientific Research Methodology 3 cr.**

This seminar aims to give graduate students the means to acquire the methodological skills essential to the development of their thesis, according to internationally accepted standards. It aims to help them respond quickly to questions they pose relative to the choice of topic, the organization of their work, using information available to them, in the writing of the thesis, and running the defense.

**LLA710 Seminar: Comparative Literature 3 cr.**

This seminar aims to develop and deepen knowledge of the Ph.D. students in comparative literature. It broadens their cultural horizons by comparing their own literature and those of other nations. It enables them to compare their own thoughts to those of others, and that of their society with those of other foreign societies, such as customs, traditions, tastes and arts that are peculiar to each of them. It raises global issues in the field of the literary world, presents the characteristics of the different schools of comparative literature, and studies the links connecting literary subjects to those of other humanities disciplines, as well as the corresponding manifestations of these same subjects in other literatures.

**LLA711 Seminar: Linguistics and Terminologies 3 cr.**

This seminar will focus on certain problems in linguistics and terminology issues which enable a fresh look at a number of key concepts used in linguistics, such as those of sign, categorization, concept, competence, denotation, and connotation. Particular emphasis will be placed on the interest that there may be to analyze, in a terminological framework, metaphors and figures of speech. This doctoral seminar proposes supervised student activities on research projects identified on an individual or small group basis.

**Pre-requisites** ARA210 or LLA210

This course aims to help students acquire the basic rules of Arabic morphology and syntax (from the perspective of functional grammar). It will allow them to produce a grammatically correct text. The method adopted uses a text or a series of typical examples, from which the students derive the rule, acquire it and apply it appropriately.

**MAC216 Ethics of Insurance 3 cr.**

This insurance law course begins with an historical overview and insight into the technical and actuarial foundations, as well as some important boundaries, particularly with regard to social insurance. The state of the business of insurance supervision is looked at, and the new law on this is commented upon. In private law, the course deals with the insurance contract and its essential terms. It ends with an overview of the reinsurance and insurance international business. The course is based on theoretical cases, as well as news articles, practice and jurisprudence and the links with the law of civil liability.

**MAC315 Insurance Contracts 1 cr.**

This course is designed to familiarize students with the different types of life and non-life insurance contracts as well as with accounting and their application in various types of insurance companies. In addition, by the end of this course, the students will have acquired the practice of life insurance. All these concepts will be addressed through workshops so students will be able to understand theoretical and practical information.

**MAC400 Actuarial Mathematics 3 cr.**

**Prerequisites** MAT312 And STA320

At the end of this course, students become familiar with the mortality tables, actuarial notations, the force of mortality, calculating the expected value, calculating the pure premium of some types of insurance contracts as well as with the calculation of reserves.

**MAC421 Demography and Actuarial Science 3 cr.**

**Prerequisites** MAT312

The aim of this course will be to acquire an overview of the theoretical bases of more sophisticated modeling and forecasting of the development of mortality which is necessary for the calculations of the life insurance premium.

**MAC430 Insurance Accounting and Mathematical Reserves 3 cr.**

**Prerequisites** MAC400

This course will allow students to understand the key characteristics of insurance accounting, recognize the types of accounting frameworks and some selected accounting concepts and to identify the fundamentals of insurer financial statements. In addition, students will have an overview on Reinsurance accounting basics and they will be able to calculate loss reserving by applying different methods such as Case reserve plus, Expected loss ratio method,

Chain Ladder and Bornhuetter-Ferguson methods. The course content is in line with the syllabus and content of "Introductory Insurance Accounting" course designed by the Casualty Actuarial Society (CAS) specifically for actuaries.

| The students are required to undertake an internship in an Insurance company or a bank. He/she will work with his/her advisors to identify the internship of mutual interest and prepares a significant written document or other work of scholarship that outlines the learning and professional development experiences of the internship. Formal presentation of the results of the internship is required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                 |              |
| <b>MAC510</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Individual Health Insurance</b>                              | <b>3 cr.</b> |
| The aim of this course is to provide students with the knowledge of what life and health insurance products are available, how are they designed, what advantages and disadvantages they have, how they can be improved and how comparison can be made. Products covered include traditional insurance as well as investment-linked, long-term care, group insurance and retirement plans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                 |              |
| <b>MAC520</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Theory of Risk</b>                                           | <b>3 cr.</b> |
| This course aims to provide students with actuarial methods and techniques of insurance to manage the risks of large portfolios of property and casualty insurance. It addresses: the basic principles of risk management, methods of calculating premiums, risk measures and the determination of the margin of solvency as well as economic capital, the correlation between insured risks and consequences, long-term balance of the operations of a company and the management of multiple risks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                 |              |
| <b>MAC530</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Non-life Insurance</b>                                       | <b>3 cr.</b> |
| This course is divided into three parts: loss models, risk and ruin, and credibility theory. In part one, we discuss actuarial models for claim losses. The two components of claim losses, namely claim frequency and claim severity, are modeled separately and are then combined to derive the aggregate-loss distribution. The techniques of convolution and recursive methods are used to compute the aggregate-loss distributions. Part two is about two important and related topics in modeling insurance business: measuring risk and computing the likelihood of ruin. In this part we introduce various measures of risk, we discuss specific measures such as Value-at-Risk, conditional tail expectation, and the distortion-function approach. We also analyze the probability of ruin of an insurance business in both discrete-time and continuous-time frameworks. Probabilities of ultimate ruin and ruin before a finite time are discussed. We finally show the interaction of the initial surplus, premium loading, and loss distribution on the probability of ruin. In the last part of this course, we study credibility theory as a tool providing the basic analytical framework for pricing insurance products. We introduce the classical approach, the Bühlmann approach, the Bayesian method, as well as the empirical implementation of these techniques. Bühlmann's approach provides a simple solution to the Bayesian method and achieves optimality within the subset of linear predictors. |                                                                 |              |

| This course focuses on the statistical analysis of time-to-event or survival data. We introduce the hazard and survival functions, censoring mechanisms, parametric and non-parametric estimation, and comparison of survival curves. We cover continuous and discrete-time regression models with emphasis on Cox's proportional hazards model and partial likelihood estimation. We discuss competing risk models, unobserved heterogeneity, and multivariate survival models including event history analysis. The course emphasizes basic concepts and techniques as well as applications in epidemiology using the statistical packages SPSS and R.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                 |              |

| Topics selected from recent literature on actuarial and financial mathematics are studied in depth. Students will be responsible for presenting selected topics from the current scientific literature. They will be graded on relevance, critical analysis and presentation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                 |              |

| This course aims to instruct students in how to examine a time series, to extract its trend and its seasonal components and to master the principal modeling and forecasting methods. It develops the concepts of modeling by the method of regression and by decomposition of a series. Other topics covered are: review of outliers, forecasts; case of correlated disturbances; deseasonalization by the moving average method; maintained or cancelled by a moving average series; average retaining local, medium polynomials under various constraints, minimizing the variance of the disturbance; capacity for smoothing a moving average; treatments of the ends; forecast using smoothing methods; exponential smoothing, methods of Brown, of Holt & Winters; second-order stationary processes; stationarity, autocovariance and autocorrelation; partial autocorrelation, Durbin algorithm; infinite moving average process, spectral density; autoregressive process AR (p), medium-sized mobile MA (q), mobile medium-Autoregressive process ARMA (p, q); canonical representation; ARIMA and SARIMA process; and an introduction to non-linear models (ARFIMA, ARCH).                                                                                                                                                                                                                                                                                                                                          |                                                                 |              |
| <b>MAC634</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Mathematics of Pension Plans</b>                             | <b>3 cr.</b> |
| The objective of this course is to give those who are beginning a career as a retirement plan professional a general background in qualified plans as a first step toward meeting the challenges of the profession. The course is divided into two parts.<br>Part 1 introduces qualified retirement plans, and identifies the special characteristics of defined benefit plans and defined contribution plans. The course addresses installing such plans, distinguishing between the types of plan documents, considering the effect a type of business has on the structure, administration of a plan and an awareness of the parties involved in the operation of the plan.<br>Part 2 covers plan administration, including census collection, benefit allocations and coverage and nondiscrimination testing. This course emphasizes daily valuation recordkeeping but includes discussions of balance-forward plans and conversions. Appropriate investments for daily valuation plans and fiduciary considerations including investment fees and revenue sharing are discussed. The processes involved in daily valuation recordkeeping are covered in detail, including daily functions, mutual fund trading and ethics concerning trading errors. Finally, the course discusses plan mergers and plan terminations including the termination of defined benefit plans.                                                                                                                                                 |                                                                 |              |
| <b>MAC641</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Financial Modelling</b>                                      | <b>3 cr.</b> |
| In this course we study discrete stochastic processes and their applications in finance (pricing of certain types of options, coverage of a portfolio, etc.). It begins with the foliation of various types of process, then we consider the concept of the conditional expectation, filtration, adapted and predictable                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                 |              |

process, Doob's decomposition of a process, then we develop the theory of discrete-time martingales, and stopping times are studied. The remainder of this course is designed for applications in finance, considering the financial options, the prices of options, strategies for managing a portfolio, self-financing strategies, arbitrage strategies, hedging strategies of options, the neutralization of risk, viable and complete markets, then certain types of financial models; the binomial for several periods model and the Cox-Ross-Rubinstein model are studied. The last model to be shown is the discretization of the Black-Scholes model, which is a time continuous model.

**MAC697A Master Thesis 6 cr.**

**Prerequisites** MAC600 Or SCF600 Or FSC600

Master Thesis Report

**MAT202 Algebra I 3 cr.**

**Prerequisites** MAT110

The course aims at providing the necessary tools and the mathematical maturity for engineers, for the design and analysis of abstract mathematical models. Subjects covered: logic and proofs, propositional calculus; sets and mappings; relations and ordered sets; an introduction to algebraic structures, groups, rings and fields; counting, finite and transfinite cardinals; matrix algebra, complex numbers and polynomials.

**MAT213 Calculus III 3 cr.**

The course covers integration methods to compute integrals, improper integrals and double integration. We will study the sequences, the numerical series, power series and their applications. Moreover, the course will include a brief look at differential equations.

**MAT216 General Mathematics 3 cr.**

This course provides the basics needed by students to progress in their specialty courses. Topics covered include: function of a real variable, elementary functions, Taylor's expansion, simple integral and methods of integration, differential equations, multivariable functions, continuity, partial derivative, the chain rule, differential, introduction to double integrals, methods of integration, Matrix calculus, determinants, and linear systems.

**MAT220 Differential Equations 3 cr.**

**Prerequisites** MAT213

This course teaches basic theory and techniques of Ordinary Differential Equations (ODEs). Topics include : Solution of non-linear first-order ODE's; Linear ODE's, especially second order with constant and variable coefficients; Delta functions, convolution, and Laplace transform methods; Power series and resolution of differential equations using power series; Real and complex Fourier series; Introduction to partial differential equations.

**MAT310 Linear Algebra 3 cr.**

**Prerequisites** MAT213

The main objective of this course is to continue the study of algebra, covering mainly linear systems and matrices, matrix algebra, inverses, Gauss elimination, elementary matrices, computing inverses, determinants, vector spaces, definition and examples of spaces and subspaces, linear independence, basis and dimension, change of basis, linear applications, reduction of an endomorphism, eigenvalues, eigenvectors, characteristic polynomial, eigenvalues, solving linear systems of differential equations, diagonalization and applications, bilinear and quadratic forms, Gauss method, scalar and cross product, euclidean and Hermitian spaces, Gram-Schmidt Orthogonalization process, geometric transformations.

**MAT312 Economical and Financial Calculus 3 cr.**

This course enables the students to become familiar with the main tools and mathematical models used in economics, finance and actuarial science. The first part focuses on the theory of interest: discount and capitalization, different measures of relevance, equivalency rate, instantaneous rate, annuity, actuarial notation and use of tables, numerical methods. The second part deals with optimizing with and without constraints of functions of several variables, linear regression and application of matrix algebra. The last part focuses on differential and integral calculus with application to problems in economics and finance.

**MAT313 Multivariable Analysis 3 cr.**

The main objective of this course is to continue the study of calculus, covering mainly parametric and polar curves, three dimensional analytic geometry, differentiation and integration of functions of several variables, and vector calculus. Line integrals, and Green's theorem.

**MAT418 Numerical Methods 3 cr.**

**Prerequisites** MAT310 and MAT220 and INF216

This course will introduce the students to numerical computation allowing them to acquire the necessary tools to gain a better understanding of the modeling problems that they will meet later. The subjects covered are the following: introduction to numerical algorithms; non-linear equations, the bisection method, the fixed point method, Newton method, secant method, and systems of nonlinear equations; interpolation techniques of Lagrange, Newton, least squares, and splines; derivation and numerical integration, numerical solution of differential equations; and various applications with MATLAB (matrix algebra, linear systems, direct methods, iterative methods, eigenvalues).

**MAT500 Numerical Analysis and Optimization 3 cr.**

The objective of this course is to introduce students to the world of mathematical modeling and numerical simulation. The modeling and simulation have taken considerable importance in recent decades in all areas of science and industrial applications. Numerical analysis is the discipline that designs and analyzes methods or algorithms. Numerical simulation enables mathematicians to tackle problems far more complex and concrete than before, from immediate motivations that are industrial or scientific, which can provide answers to both qualitative but also quantitative questions; this is mathematical modeling. On the other hand, the scientist who was able to numerically simulate the problem does not stop there: he then wants to be able to change some parameters to improve or optimize the operation, performance, or the response of a system by maximizing (or minimizing) the associated functions. It is precisely the goal of optimization that provides theoretical or numerical tools to do this. Numerical analysis and optimization are therefore two essential and complementary mathematical modeling tools.

**MAT522 PDE and Modeling 3 cr.**

This course aims to teach students the mathematical maturity and the rigor of the methods of classification and resolution of partial differential equations, essential to mathematicians, engineers and computer scientists. It enables students to acquire the basic theoretical tools for manipulation of equations in partial derivatives frequently encountered in mathematical models applied to problems from mechanics, acoustics, hydrology, etc. Topics covered: total differential, integrating factors, linear equations of first order, partial differential equations in partial derivatives of order  $n$  to two variables, non-linear first-order partial differential equations, equation of heat and wave equation.

**MAT523 Group Theory 3 cr.**

This course is an introduction to the theory of groups which gives access to the many uses of theory of groups in mathematics. The central concepts are the structure and the actions of groups. Classifications of groups of small orders and of simple groups serve as motivation throughout the course. The themes addressed are: group actions, Sylow theorems, Semidirect Product, type finite Abelian groups, linear groups, projective groups and representations of finite groups. We derive two families of finite simple groups.

**MAT601 Special Topics in Mathematics I 1 cr.**

|                      | Advanced Topics selected from recent literature on mathematics are studied in depth. Students will participate in a series of conferences presented by experts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |              |
| <b>MAT603</b>        | <b>Tutorial in Mathematics</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>1 cr.</b> |

|                      | Topics selected from recent literature on mathematics are studied in depth. Students will be responsible for presenting selected topics from the current scientific literature. They will be graded on relevance, critical analysis and presentation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |              |
| <b>MAT610</b>        | <b>Discrete Mathematics</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>3 cr.</b> |
|                      | The first part of this course is designed to introduce students to the use mathematical language and reading and writing mathematical proofs as well as to the concepts and basic discrete math results which will be then used in the curriculum of mathematics and computer science. In the second part, we introduce some more advanced concepts in discrete mathematics with emphasis on mathematics used in algorithms (order, lattice, Boolean algebra, graph theory). It covers the following topics: mathematical methodology (logic, truth table); sets and relations; Boolean algebra; elements of arithmetic (Bézout's theorem, Fermat's little theorem, Euclid's algorithm); recursion and induction (linear and non-linear recurrence); graph theory (basic definitions, graph oriented and non-oriented, paths, matrices of incidence, Euler's theorem, planarity, coloring, labeled graphs, trees); mesh (introduction to partial order structures, terminal upper and lower); Boolean algebra (Boole lattice and rings of Boole, Boolean functions, normal forms); and rational and finite-state machine.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |              |
| <b>MAT620</b>        | <b>Spectral Theory</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>3 cr.</b> |
|                      | The spectral theory, an essential branch of functional analysis, applies to both pure and applied mathematics (differential equations or PDEs, theory of Von Neumann algebras) as in physics and chemistry. The purpose of spectral theory is, for some Endomorphisms of a hilbertian space, to obtain reduced shapes similar to the canonical forms of Jordan for the Endomorphisms of a finite-dimensional vector space and diagonal forms for the Endomorphisms of a hermitian space vector finite-dimensional hermitian. The theory of Hilbert-Schmidt applications was encountered for the first time in the integral equations, to build a first generalization of the results obtained in the finite-dimensional. In fact, the natural setting of this generalization is that of compact applications, studied by F. Riesz. Nevertheless, the case of the more general Endomorphisms escapes this framework; it is a subject for the spectral theory of Hilbert, which uses the techniques of integration. This course is intended primarily for students in the Master of mathematics, and it presents the mathematical tools of spectral theory: Basic Elements of functional analysis (normed spaces and spaces of Banach, spaces of Hilbert, continuous linear maps, duality, weak topologies), passage of the finite to the infinite dimension for continuous linear operators, dimension theory of compact operators, various forms of the spectral theorem, and self-adjoint operator theory.                                                                                                                                                                                                                                                       |              |
| <b>MAT623</b>        | <b>Distribution Theory and PDE</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>3 cr.</b> |
|                      | In mathematical analysis, a distribution (also called generalized function) is an object which generalizes the notion of function and measurement. The theory of distributions extends the notion of derivative to all locally integrable functions and beyond, and is used to formulate solutions to certain partial differential equations. They are important in physics and engineering where many discontinuous problems naturally lead to differential equations whose solutions are distributions rather than ordinary functions. The theory of distributions was formalized by the French mathematician Laurent Schwartz leading him to win the Fields Medal in 1950. Its introduction uses linear algebra and topology concepts centered around the idea of duality. We look for the origin of this theory in the symbolic calculation of Heaviside (1894) and in the introduction by physicists to the "Dirac function" (1926). The objective was to generalize the notion of function, in order to give a correct mathematical meaning to objects handled by physicists. It was necessary to keep the ability to do operations such as derivations, convolutions, and transformations of Fourier or Laplace. The distribution of Dirac is an interesting example of distribution because it is not a function, but can be represented informally by a degenerate function which would be void on its domain of definition, except 0 and the integral would be 1. In reality, quite strictly, it is the limit of a sequence of integral functions 1 distributions and converging uniformly to 0 on all compact does not contain 0. Such a mathematical object is useful in physical or signal processing, but no regular function has these properties. |              |

|                      | Lie groups are groups equipped with a structure of manifold compatible with their group structure. Combining topology, algebra and geometry, they play a fundamental role in many branches of mathematics, but also in theoretical physics. This course is an introduction to the theory of Lie groups and Lie algebras, through the broad matrix Lie groups.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |              |

|                      | This is a first remedial course in Mathematics and Statistics designed for freshman students. The course uses MyFoundationsLab instructional software to diagnose areas of conceptual knowledge that students need to work on to gain mastery of topics from Basic Math through Intermediate Algebra and Statistics. The goal is for each student to spend time learning and studying only those topics which he/she needs to gain mastery, not the ones that he/she is already proficient in. This may allow students the opportunity to progress through more than one level of math in one semester, depending on the time and effort that they commit to the course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |              |
| <b>MGT220</b>        | <b>Principles of Management</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>3 cr.</b> |
|                      | An introductory course explaining the definition of management as a set of activities, including: planning and decision-making, organizing, leading, and controlling, directed at an organization's resources, including the human, financial, physical, and informational, with the aim of achieving organizational goals in an efficient and effective manner.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |              |

|                      | This course is designed to help the students learn about and apply the basic concepts and practices of modern marketing as they are used in a variety of settings. It is intended for business students who wish to become the decision-makers of tomorrow at the middle or upper levels of management since it gives students a comprehensive and innovative managerial and practical introduction to marketing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |              |
| <b>MSS310</b>        | <b>History to Sacred Music</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>3 cr.</b> |
|                      | This course is an introduction to music in its relation to religion. It includes general concepts on religion, philosophy, the sacred and their rapport with music. Subjects to study: the function of sacred music, the relationship of religion with music, tradition and renewal in sacred music; sacred music categories, forms and genres of sacred music, classification of sacred songs in the Maronite Church, and the characteristics of sacred music etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |              |
| <b>MSS405</b>        | <b>Gregorian Chant</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>1 cr.</b> |

Gregorian chant is the central tradition of Western plainchant, a form of monophonic, unaccompanied sacred song of the western Roman Catholic Church. Gregorian chant developed mainly in western and central Europe during the 9th and 10th centuries, with later additions and redactions. Although popular legend credits Pope St. Gregory the Great with inventing Gregorian chant, scholars believe that it arose from a later Carolingian synthesis of Roman chant and Gallican chant.

Gregorian chants were organized initially into four, then eight, and finally 12 modes. Gregorian melodies are traditionally written using neumes, an early form of musical notation from which the modern four-line and five-line staff developed. Multi-voice elaborations of Gregorian chant, known as organum, were an early stage in the development of Western polyphony.

Gregorian chant was traditionally sung by choirs of men and boys in churches, or by men and women of religious orders in their chapels. It is the music of the Roman Rite, performed in the Mass and the monastic Office. Although Gregorian chant supplanted or marginalized the other indigenous plainchant traditions of the Christian West to become the official music of the Christian liturgy, Ambrosian chant still continues in use in Milan, and there are musicologists exploring both that and the Mozarabic chant of Christian Spain. Although Gregorian chant is no longer obligatory, the Roman Catholic Church still officially considers it the music most suitable for worship. During the 20th century, Gregorian chant underwent a musicological and popular resurgence.

**MSS415** **Syriac Chant** **1 cr.**

The Christian churches of the East are the guardians of a tradition dating back to the early days of Christianity. The Syriac Church is part of a community of independent Christian churches that were born in the East as a result of the separation from the Church of the West. The Syriac church music is vocal, and its liturgical language is Syriac. Ancient language, it is a late dialect of Aramaic (the language spoken by Christ). Syriac is still spoken today, both within the Church and outside. The Syriac scholars who exerted a lasting influence on the Christian world, include St-Ephrem (306-373), Jacob of Serugh (451-521), St. Severus, Patriarch of Antioch (died 538), Jacob of Edessa (died 708) and Bar Hebraeus (died in 1286). Saint Ephraim has composed a very large number of hymns and liturgies.

As is the case in all the churches of the East, the Sunday mass dominates the spiritual and religious life of the faithful. It is celebrated by the priest who stands at the altar while the deacons, placed in two groups or more exactly in two choirs on each side of the altar, sing alternately (antiphonal) all by assisting the priest in the celebration of the mass. Syriac chant places its melodic styles (qinto) within an overall unit (oktōēchos, or set of eight modes). The texts of the sacred songs were compiled in more than twenty liturgical books that include a comprehensive collection of hymns. The texts of the prayers are contained in fifteen liturgical books, including the shkhimo or book of offices for the days of the week, the book of the Holy Mass, the fanqith, or book of prayers for the year (Sundays, holy days...) and the book betkaz (treasure of melodies), complete collection of Church songs.

**MSS420** **Byzantine Chant** **1 cr.**

The Aim of this course is to go through the foundations of Byzantine chant and its three 'genera': the diatonic, the chromatic, and the enharmonic; its eight 'modes' or 'tones'; its roots: Greek (as proven by historians who suggest that as Christianity "took over the language of the Greeks... so also it took over the religious music of the Greeks and adapted it to its own needs") Non-Greek (as proven by historians who tend to assert, "the basis of the Christian music during the early centuries was not simply Greek, but Graeco-Roman" and Hebrew); and its key characteristics: as being Entirely vocal, no use of instruments, Monophonic, using only melodies in one part, Antiphonic, executed by two alternately chanting choirs, ison, the holding-note, and leading the chant. As well as the difference between Orthodox Byzantine chants and Catholic Byzantine Chants.

**MSS430** **Armenian Chant** **1 cr.**

This course Covers the Armenian chant, composed in one of eight modes, written in khaz, a form of indigenous musical notation. As well as many the ancient origin of these chants, extending to pre-Christian times, while others are relatively modern, including several composed by Saint Mesrop Mashtots, who re-introduced the Armenian alphabet. Some of the best performers of these chants or sharakans, are at the Holy Cathedral of Etchmiadzin, and include the late soprano Lusine Zakaryan. And the Armenian religious music that remained liturgical until Komitas Vardapet introduced polyphony in the end of the 19th century. Apart from his contribution to religious music, Komitas may be considered the founder of modern classical Armenian music. From 1899 to 1910, he travelled through the Armenian highlands and collected more than 3,000 folk tunes many of which he harmonized and transformed into Lieder.

**MTR222** **University Working Methodology** **3 cr.**

This course will provide first year students in humanities with essential methods for the preparation of their work during the years of study at the University. These methods are common to all material and address different levels, ranging from exercises promoting correct educational attitudes in the introduction to the methods of work, the investigation of a text, and finally, to the mastery of speech essential to establish exchange with others, orally and in writing, and to assert with confidence and autonomy. In addition, the objectives of this course will address data essential for the design, drafting and the realization of research work.

**MTR500** **Research Methodology** **3 cr.**

This course improves student skills in writing research proposals and conducting basic research. It enables students to become critical readers of professional literature and develop a critical spirit of inquiry by providing a structured way of thinking about information studies problems and their resolutions. Thus, students will practice writing a typical research proposal which includes: thesis statement/hypothesis, context, variables, literature review, research methods, outlining, results, and so forth. They will also apply basic aspects of quantitative and qualitative analyses within the frame of research proposals. The purpose of this course is to provide students with research training: knowledge and skills. It includes theoretical and methodological teachings, in addition to practical applications. It introduces students to research techniques and analysis methods, and provides them with the methodological framework required to write a research paper or a thesis. The course also includes a purely technical and formal objective: empowering students to apply the rules of research presentation in accordance with what is required by the University, or even on a universal scale, through the implementation of practical work adapted for this purpose (using methodology books, reviewing dissertations or theses, project outlines to be submitted, reports on the proceedings of defense sessions, etc.).

**MTR501** **Research Methodology** **3 cr.**

This course aims to provide students with research training: a knowledge and a "Know-how". It includes theoretical and methodological teaching, as well as practical applications. It introduces students to research techniques and analysis methods, and provides them with the needed methodological framework to perform a research note, a paper, or a thesis. The course also includes a purely technical and formal objective: allowing students to apply the presentation's rules of a research, in conformity with the required by the University, or on a universal scale, by carrying out practical work adapted for this purpose (Reports of methodological books, critical of papers or thesis, draft projects to be submitted, report on thesis defense sessions...).

**MTR575** **Research Methodology in Humanities** **3 cr.**

The course aims to introduce a working method, in order to conduct scientific research. It is mainly about conducting research required at the level of Master's thesis and implementing the different stages of scientific research, ranging from the position of the problem until the drafting and final presentation of the research. Furthermore, regarding a research topic, the course looks at how to select a problematic and devise relevant hypotheses, choose an appropriate technique and then apply it. Students will learn how to communicate the results of research in the form of a clear, rigorous and scientific text. The purpose of this course is to master the design, drafting and submission of the dissertation.

**MTR681** **Quantitative Methods in Humanities** **2 cr.**

This course introduces students to the multiple uses of statistics and contexts from which data is drawn. It allows them to acquire mastery of statistical concepts used in their research and be able to conduct proper investigations. This course provides the Master's students with the basic knowledge that enables them to act with autonomy in surveys and data processing. It enables them to systematize the stages of an investigation through data collection, data organization, analysis and interpretation of data. Students also learn to use statistical tools for compiling the data and analysis of results.

| The aim of this music performance course is to provide the opportunity for the students as performers to come together with other like-minded musicians in an ensemble setting to rehearse and perform from the chamber orchestra repertoire. In this course we will focus on overall concepts of self and ensemble expression, engagement, participation, and performance. We will also address musical concepts of ensemble and individual balance, blend, intonation, phrasing, dynamics, articulation, tone, rhythmic precision, color, and ensemble clarity. We are going to listen to ourselves, to each other and to the composer's voice.                                                                                                                                                                                                                                                                           |                                                       |              |

We will also address musical concepts of ensemble and individual balance, blend, intonation, phrasing, dynamics, articulation, tone, rhythmic precision, color, and ensemble clarity. We are going to listen to ourselves, to each other and to the composer's voice.                                                                                                                                                                                                                                                                           |                                                       |              |
| <b>MUG205</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Musicological Research</b>                         | <b>1 cr.</b> |
| This course is an introduction to musicological research. It includes four parts: objects and methods, sources, musicological research and presentation standards. It is essentially practical and aims to help future musicologists and researchers become apprentices in their undergraduate studies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                       |              |
| <b>MUG305</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Music and Dance</b>                                | <b>2 cr.</b> |
| Attendance and participation are of primary importance for this class. Students will be introduced to a wide variety of techniques and styles in order to learn correct body alignment in basic positions, build a kinesthetic awareness of their own physical abilities, and develop a sense of musicality and rhythm. Students will learn the following dances: waltz, tango, cha-cha, salsa, cumbia, merengue, foxtrot, country line dance, rumba, swing, samba, etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                       |              |
| <b>MUG330</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Music Languages</b>                                | <b>2 cr.</b> |
| The goal of this course is to give to the students a general idea about the evolution of musical language from its beginning to the twentieth century: the scale of harmonics; the cycle of fifths, consonance and attraction, tolerance, habituation, equalization, the formation of the scales, relative pitch and absolute pitch, the organization of the sounds in space and in time, the melodic order and the harmonic order, the chromatic scale; the irregular and altered scales; from ditonic scale to heptatonic scale; accuracy and the acoustic systems; the equal temperament.                                                                                                                                                                                                                                                                                                                                |                                                       |              |
| <b>MUG335</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Musical Acoustics</b>                              | <b>3 cr.</b> |
| This course concentrates on: vibratory motion of typical musical sound sources, propagation of sound, wavelength, period and frequency, pressure and acoustic intensity, the acoustic impedance speed, etc; perceived pitch, loudness and timbre of a sound; the objectively measurable properties of a sound wave; explaining how sound is generated - transformed by the musical instruments and the human voice; defining the reverberation time of a hall, using a formula relating reverberation time to the volume of the hall and the absorption of its surfaces, and discussing the acoustical properties desirable in concert halls and opera houses; microphones, amplifiers, speakers and sound capture acoustic treatment and correction.                                                                                                                                                                       |                                                       |              |
| <b>MUG340</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Introduction to Musicology and Ethnomusicology</b> | <b>3 cr.</b> |
| This course provides an introduction to concepts and approaches to music research as encountered in the co-disciplines of historical musicology and ethnomusicology. It aims to develop students' critical thinking in areas of historiography, fieldwork, musical meaning, and aesthetics. It introduces students to some of the methodologies and research techniques employed musicology and ethnomusicology.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                       |              |

| This course is open to current and transdisciplinary musical concerns. The concept for transdisciplinarity does not define a degree of specialization, but rather refers to a type of approach that allows the addressing of contemporary issues based on various disciplines and different fields of knowledge, placing the reflection beyond the mere juxtaposition of the subjects studied. The first set gives rise to learning activities that allow the student identify major issues of contemporary concern, to demonstrate the contribution of various disciplines in the understanding of a problem, through theories, concepts and methods of analysis. The second set invites the students to confront the real world and deal with a contemporary problem in a research piece where, after they have identified and analyzed the problem, they will have to justify the relevance of their proposed solutions. |                                                       |              |

| This course explores the influence of music on the individual and on society and the influence of society on the musician and composer - and thereby on the music industry. It concentrates on the socialization processes and the factors affecting musical behavior. It also deals with the formation of self-musical image in accordance with the musical image of society, expectations, competition and cooperation, leadership and self-confidence, creativity and the aesthetic values of creativity etc.                                                                                                                                                                                                                                                                                                                                                                                                            |                                                       |              |

| This course will introduce students to the basics of music; it will cover material such as pitches, rhythms clefs, scales and dynamics. The utility of this course as part of the general requirement is to become familiar with the musical language through experiences based on fun activities making it enjoyable as well as useful.                                                                                                                                                                                                                                                                |                                                                         |              |
| <b>MUS237</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Lebanese Music</b>                                                   | <b>3 cr.</b> |
| This course is designed to: 1 – Sensitize students to Lebanese folk music. 2 - Make them aware of the danger that threatens this music: a Heritage endangered. The disappearance of the songs with the disappearance of the circumstances and opportunities serving their raison d'être. The disappearance of the 'old', guardians and deliverers of the tradition. A heritage uncollected, not recorded in a scientific way. 3 – Let them discover the diversity of forms: mostly little known and unknown forms. 4 - Study of the poetic-musical internal structure of each form of traditional song. |                                                                         |              |

|                   | This course offers the students the M.I.D.I. Norms and the technique of the DIGITAL AUDIO, presenting to the manipulator of huge facilities such as the creation of libraries containing thousands of sounds "samples" and ready to be used, registration of an infinity of tracks in M.I.D.I and more than 64 tracks in audio, the correction of wrong notes and tempo notation and printing of the music sheet and a lot of other very mundane tasks of our time, but which were considered impossible, in the audio field, twenty years ago. Man is the only creator and innovative element and the computer is that his tool towards the accomplishment of his work in a faster and more advanced ways.                                                                                                                                                                                                           |              |

|                   | The examination of the form is a fundamental element of any analysis, because the form depends on the various components of a work, namely melody, rhythm, instrumentation, dynamics, tonal course, elements of unity and contrast ratio, relationship between text and music if it is a voice composition and other components. To understand musical forms, is to discern the sound architecture.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |              |

|                   | This course opens on the years that mark the death of Jean-Sébastien Bach, the decline of the baroque era, with the dawn of the classical musical style. It deals with the following subjects: French (from 1661 to 1764) music, music of the Germanic countries around Bach and Handel, English music in the 18th century, the birth and diffusion of classicism in Polish music, music in Spain, the music in Italy from the death of Carissimi to the end of the eighteenth century, classicism in Austria and the German-speaking countries, from the death of Telemann to the death of Beethoven, the formation of the classical style in Europe and the classical masters: Haydn and Mozart.                                                                                                                                                                                                                    |              |

|                   | This course aims to train musicians on vocals, choirs and choir conducting. It includes concepts about the human voice and its education, the choir and its training, the conductor of the choir (values, posture, technique, behavior, etc.), choral conducting (departure gesture, the fermata, the stop gestures, the syncopation and offbeat, repeat, etc). This course includes exercises on the evolution of the musical ear, on conductor gestures, on the conducting of simple meters (2/4, 3/4, 4/4).                                                                                                                                                                                                                                                                                                                                                                                                        |              |
| <b>MUSC425</b>    | <b>Choir Conducting II</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>1 cr.</b> |
|                   | This course deepens the knowledge learned in choral I. Continuing to work on the technique of direction, on the didactics of voices, on polyphonic conducting, on meters and more complicated rhythmic formulas, the student will also learn how to prepare a piece for choir, how to deal with technical difficulties, how to practice with the choir and how to direct before an audience. By watching movies about great choir masters and orchestra rehearsals, we observe their actions and their methods of work.                                                                                                                                                                                                                                                                                                                                                                                               |              |

|                   | This course helps both musicians, students and engineers better design their music, providing access to its standard and technique of DIGITAL AUDIO, that presents to the manipulator enormous facilities, such as the creation of libraries containing thousands of "sampled sounds" ready to be used, the registration of an infinity of its tracks in M.I.D.I and more than 64 tracks in audio, the correction of false notes and tempo, the notation and printing of scores and many other mundane tasks of our time, which were considered impossible in the audio field, twenty years ago. Humans are the only creators and innovative elements and computers are their tools, used in the fulfilment of their work in a faster and more sophisticated way. Finally, students put into practice what they have acquired and completed: a project showing their knowledge in the field of the M.I.D.I and audio. |              |
| <b>MUSC535</b>    | <b>Musicological Meetings</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>2 cr.</b> |

This course articulates in two ways. - Scientific: conferences, interviews and discussions around a musicological theme following meetings with musicians, and musicologists, of the famous amateurs. - Cultural: proposed manifestation of various and varied cultural demonstrations (movies, theater, music, reading of musicological texts, etc.).

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                    |              |

| This course deals with Lebanese curriculum of music education and its development over the years (sixties to the present day). It also deals with the textbook as a multifaceted tool; the textbook from here and elsewhere, from yesterday to tomorrow. In a cross-cultural aim, taking into account both the specificity of our culture and the trend towards globalization, this course introduces students to prepare a syllabus for the musical material to teach in interrelation with other subjects, using technological means, and taking into account the importance of group work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                    |              |
| <b>MUSC545</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>The Great Masters of Arab Music</b>             | <b>2 cr.</b> |
| This course covers the Cairo Congress and the 20 <sup>th</sup> century great masters of Arab music.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                    |              |
| <b>MUSC605</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>History of 20th Century Music</b>               | <b>3 cr.</b> |
| This course discusses: The different currents and musical styles of the 20th century: Impressionism, symbolism, neo-classicism, expressionism, dodecaphony, serial music, electronic music, electroacoustic and concrete music, random music. The characteristics of the 20th century are also studied: the importance given to the different timbres of instruments especially percussion instruments and their use in a new way. Percussion instruments become prominent and numerous, reflecting the interest of this century for unusual rhythms and timbres (tone colors). Fundamental changes in the treatment of chords. The traditional distinction between dissonance and consonance is abandoned. New structures of chords: Polychord (new structure not based on third but on fourths), and tone cluster etc. The exploration of alternatives to the traditional tonal system. The musicians of this period are also discussed: Debussy, Ravel, Stravinsky, Schoenberg, Berg, Webern, Bartok.                                                                          |                                                    |              |

| <b>MUSC615</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Research Methodology</b>                        | <b>2 cr.</b> |
| This course aims to foster the ability to research, to develop a working process, to master the method specific to science, to find simple, authentic and objective, methods to organize the stages of data collection, and to carry out the results of scientific research. This course discusses: The key concepts, names and references, drafting and presentation protocols, the different stages of a scientific work from the position of the problem, to the collection of data - until the final draft.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                    |              |

| The purpose of this course is: 1- Empowering students to make orchestrations or musical arrangements from a specific format (Piano Sonata) for any format orchestral format (Duo, Trio Quartet, Chamber etc.). 2- Teaching them how to reduce orchestral scores to piano score. The student will: - learn the fundamentals of arranging for different orchestral ensembles. - acquire the basic element such as writing a melody/harmony for strings, woodwinds, brass and percussions. - examine and analyze orchestral scores from the repertoire. - anticipate musical colors and texture, as created by instrumental combinations.                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                    |              |

| Philosophy and music and not Philosophy of Music because music is an art, a science, a school, and creativity; it is not, therefore, just a concept addressed by philosophy diagnosing, analyzing and criticizing. It is an objective epistemological and analytical approach, implicating the philosophy of music, as a latter attempt to understand humans and help them understand the mysteries of the universe, the sound, the melody, and the rhythm. It also does not exclude this scenography, because fantasy creator is mostly interested in the colors of the Sun of reality and the vibrant life of existence. After trying to get closer to the music and its place in human knowledge priorities, we will identify the most important theories of philosophers who read this art and built philosophical representations for this art in general, and the role of avant-garde music, in particular. What is the relationship of music with humans, with society, with the world, with God etc. ? This is one of the questions we will try to answer in this course. |                                                    |              |

| This course covers the theories and processes of music therapy, the history of the profession, and a survey of basic principles, methods, techniques, and applications. Students will visit facilities where music therapy is practiced, observe music therapists in action, and discuss the role of music in therapy within a wide variety of clinical and community settings. In addition, they will be introduced to music therapy practices in different countries, through published literature.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                    |              |

| This course focuses on the preservation of materials found in museums and other cultural and historic institutions, and covers topics such as the chemical and physical nature of the cultural work, agents of deterioration, preventive conservation strategies and proper care and handling of artifacts, as well as the appropriate cleaning and maintenance of art objects and historic artifacts. The course also covers the storage environments for archaeological objects, and the packaging and support materials for collections.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                    |              |
| <b>MUSM615</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Inventories and Documentation Practices</b>     | <b>3</b>     |
| This course deals with the new developments in inventory making techniques, documentation and exploitation of preventive conservation files, and the links that these tools have with specific professions. It aims at looking into manual and computerized inventory methods based on concrete cases. The course will be divided into two parts. The first one is dedicated to the marking principles and methods on different aids and media: it consists of "security" markings such as inserts, invisible ink, and "management" markings such as barcode labels and radiofrequency. The second part will revolve around two basic modules: knowing how to establish an archiving chart; understanding its uses, functions and applications (for the current and intermediary archives); and implementing the different phases for the processing of the final archives collections.                                                                                                                                                                                           |                                                    |              |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                          |              |

| <b>MUSM635</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Communication, Dissemination and Development of Archival Heritage</b> | <b>3</b>     |
| This course aims at providing different operating elements to people working in an archiving department, so as to meet the expectations of the public using such a service. It focuses on the different actions aimed at emphasizing the value of archives and on the analysis of the means needed for organizing cultural activities. Also, the essential elements for setting up an exhibition will be discussed: material, premises, partners, documents selection and costs. It will discuss any event aiming at valuing the archives collections and at identifying the expectations of the audience, as well as the development of the skills and know-how of a quality welcoming, in order to provide the community with scientific information.                                                                                                                                                                                                             |                                                                          |              |
| <b>NSBT520</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Language and Communication</b>                                        | <b>1 cr.</b> |
| The main objective of this course is to enhance skills in basic modern languages (French and English) and adapt them to communication and scientific language. It is also to improve integration in the professional world on one hand and validate mastery of a language on the other.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                          |              |
| <b>NSBT525</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Biotechnology and Bioinformatics</b>                                  | <b>3 cr.</b> |
| The objective of this course is for the students to: know the cell cultures, have an ability to apply plasmid construction technology, of transfection and protractors genes, know the main morphological cellular imaging, know the biochemical approaches, know the databases and their importance in biotechnology and neurobiology, understand the methods used in structure prediction, and understand the methods used in the analysis of sequences.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                          |              |
| <b>NSBT530</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Functional and Cognitive Anatomy</b>                                  | <b>2 cr.</b> |
| The objective of this course is to give the students a vision that is both comprehensive and detailed of functional neuroanatomy, to know: the basic principles of the organization of the nervous system and the main function of each part; the main neural pathways involved in the main functions of neural processing; the sensory input and behavioral responses; the basic methods of functional neuroanatomy; understand how the information is generated in each system and subsystem; how different modalities of information are superimposed along the neural pathways; how neural processing in a nucleus or a structure can induce behavioral changes; and how an injury can induce a variety of symptoms.                                                                                                                                                                                                                                            |                                                                          |              |
| <b>NSBT535</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Cellular Neurobiology and Physiology</b>                              | <b>3 cr.</b> |
| The educational objectives are to clarify the mechanisms that steer the transmission and integration of messages in the nervous system. The mechanisms of synaptic transmission and its modulation, the role of interactions between neurons and glial cells and the functioning of neural networks (genesis and control of rhythmic electrical activity) will be the main topics in this course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                          |              |

| The objective of this course is to introduce and implement the various methodological approaches used in research in neurosciences. The various practical sessions, organized in workshops (4 hours) are associated with a session of tutorials (1 hour) to present the problems, or analyze experimental results. Practical sessions were chosen in order to implement the latest technologies used in research in neurobiology (pharmacology, imaging, cellular and molecular biology, behavioral analysis). In addition, this course includes concepts of biostatistics which aims to provide students with knowledge bases in biological data analysis, including the ability to determine methods adapted to current situations. A high level knowledge of statistical methods is essential for proper planning of numerous scientific investigations. Students also learn how to use specialized software using concrete examples.                            |                                                                          |              |

| This course aims to give students a clear view of pathophysiological mechanisms that lead to disease through the development of animal models. These bases will enable the students to understand the origin and molecular cellular dysfunctions of neural networks that can result in neurological or psychiatric disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                          |              |

| The main objective is to provide solid and updated training in a number of specialties including cognitive neuroscience. This module will indeed help students to know the anatomical and functional bases and fundamental mechanisms of emotions and cognitive functions in relation to behavior, and to understand the nature of interactions between emotion, cognition and behavior.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                          |              |

| The objective of this course is to give students the basics of neuropharmacology covering the molecular, cellular and integrated neurotransmission, for the study of psychotropic pharmaceuticals and their modes of action. This will enable them to understand the specifics of each of these neurotransmitters including questioning their functional organization in the brain, their involvement in cellular and behavioral responses and pharmacological interactions between these systems. This course is an important prerequisite for the development of central nervous system pharmaceuticals.                                                                                                                                                                                                                                                                                                                                                          |                                                                          |              |
| <b>NSBT557</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Biophysics</b>                                                        | <b>2 cr.</b> |
| Molecular and cellular biophysics: structure of macromolecules in solution, forces of interactions and stabilisations of macromolecular ultrastructures, organised systems and biological membranes, dynamics of biological pairs: modelization and theory, flux cytometry; Techniques of spectroscopic and sensory analysis and separation of biomolecules: visible-UV spectroscopy, spectroscopy of middle infrared, Raman spectroscopy, emission spectroscopy: fluorometry (FRET, FLIM, FRAP...), radioactivity and biomolecules.                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                          |              |

| The objective of this course is to introduce students to the intellectual approach of genomics, transcriptomics and proteomics, explaining the different techniques used in these areas. These concepts will be illustrated with examples in the field of basic and clinical neurosciences.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                          |              |

| The management and use of animals, plants or micro-organisms raises issues of philosophy, ethics, environmental sustainability and the biosphere. Thus it becomes necessary to take into account operating conditions of biological material and compliance with ethical rules. The objective is to provide an overview of the principles of development, bioethics, economic rules and studying drug development: ethical and legal bases that should govern research in neuroscience; understand the reasoning mechanisms and choices in situations that challenge the ethics in this field, principles and economic laws that run the research; understand the implications of these principles and the practical steps that should be installed to ensure quality, profitability and sustainability; describe the different stages of clinical research; the various research oversight bodies; and understand the major stages of pharmaceuticals development. |                                                                          |              |

| Students in this course can acquire relevant knowledge and deepen the perspective of fundamental and clinical research in neuromorphology and functional imaging of the brain. The skills acquired by students at the end of this course are: the ability to recognize the main anatomical structures of the brain in 2D and 3D MRI in humans and primates in vivo and post mortem; ability to analyze and identify the cerebral cortex primary furrows, secondary and tertiary main grooves, and recognize the major interindividual variations; ability to identify key eloquent areas of the brain on MRI volumetric representations and f-MRI; ability to perform a tractographic analysis and recognition of the main projection pathways and associations, such as the corners on the imaging workstation.                                                                                                  |                                                            |              |

| The aim of integrative physiology is to understand the mechanisms underlying the various physiological functions at every level of integration at which they appear: from the cell to the organism as a whole. The nervous system has a major place because it coordinates the activity of the different organs. After the first section of this course, students will realize that many events in a body are rhythmic, and that any individuals or species are defined by their temporal organization as much as their anatomy. It is why this course is a "focus on biological rhythms".                                                                                                                                                                                                                                                                                                                        |                                                            |              |

| This three-credit course introduces the basic concepts related to nutrition. It gives an overview of nutrients, including their food sources, digestion, metabolism, functions, and requirements in humans. This course also examines the use of dietary guidelines and recommendations to assess the nutrient intake of healthy individuals. Upon completion of the course, students will be able to make optimal food choices for better health.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                            |              |

| This course is a completion of the NUT211 to acquire in-depth knowledge and understanding of the dietary requirements, functions, food sources of vitamins and minerals. Knowledge acquired during this course will be of great asset to master for assessment of nutritional status, and screen deficiencies in micronutrients, which are cornerstone skills required for any dietician. The food exchange system and the food composition list will be treated to provide skills and tools to be ready to hang over easily to the next course of Clinical Nutrition.                                                                                                                                                                                                                                                                                                                                            |                                                            |              |

| This courses analyzes different activities related to food consumption in a certain society. It allows the students to evaluate certain food consumption situations in order to examine the consumer's reaction and behavior according to the economic theory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                            |              |

| This course focuses on the study of the functions of living things with an emphasis on the relationship between the anatomy and functions of tissue and systems essential to sustain body homeostasis. This relationship is the central theme of this course. We will describe how cells are organized according to specialization into body systems and unveil how homeostasis is essential for cell survival and how body systems maintain this internal constancy. All organs and systems involved in nutrition-related diseases will be discussed like the Digestive's, Cardiovascular's, Urinary's, Renal's, Immune's, Skeletal's, Circulatory's, Endocrine's and Nervous's. This course serves as a foundation and capstone to facilitate understanding in the context of normal body conditions to be ready to hang over easily to the next courses of Clinical Nutrition and Clinical Nutrition Practice. |                                                            |              |

| Students will study the anatomical structures of the animal body as arranged into systems and they will correlate forms with functions performed, under specific laws and principles in an overall homeostatic setup. The course covers a range of topics where students will gain a general understanding of the organic structures and functions of the body systems and the coherence between organs of the body. They will also learn about homeostasis and steady state of the human body, as well as the overall laws and principles that rule body functions.                                                                                                                                                                                                                                                                                                                                              |                                                            |              |

| The course describes the structure and function of the digestive, endocrine and reproductive systems. It also gives a clear idea of fluid and acid balance taking place in the human body, as well as energy balance and temperature regulation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                            |              |
| <b>NUT314</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Principles and Practices in Food Service Management</b> | <b>3 cr.</b> |
| This course offers comprehensive, current, and practical overview of foodservice operations and business principles. It introduces students to the basic principles of foodservice management, which can be applied to all types of foodservice organizations. Menu planning process, design, budgeting and analysis of the different service operations will be covered. After completion of this course, students will have all necessary information to manage operation functions in food service such as financial management, human resources and marketing.                                                                                                                                                                                                                                                                                                                                                |                                                            |              |

| This food processing course is considered as a scientific and technological activity covering the major food processes in the industry. It involves the application of scientific principles in industries in order to produce convenient products for the market while preventing spoilage. This course gives the students the opportunity to discover conventional and new techniques used for processing and preservation of food materials. In addition, a nutritional and sensory evaluation of food will be discussed.                                                                                                                                                                                                                                                                                                                                                               |                                                   |              |

| This course provides a comprehensive overview of human physiological needs and outlines the various parameters of the energy equation. The metabolism and impact on health of certain food substances will be developed (carbohydrates, lipids and alcohol-including essential fatty acids and their derivatives). Body composition and its evaluation methods will be explored. Muscle activity will be addressed in the physiological dimension, nutritional (energy systems, use of substrates), benefits (cardiovascular and others), etc. The Recommended Dietary Allowances will also be discussed.                                                                                                                                                                                                                                                                                  |                                                   |              |

| This course will discuss primary metabolic pathways for macronutrients carbohydrates, lipids, and proteins, and their interrelationships with emphasizing those reactions particularly relevant to issues of health. Energy metabolism and regulatory nutrients and their health implications of altered body weight will be explored. This course content include pertinent nutrition science-based to provide students with the fundamental information for assimilating new scientific discoveries and develop their writing and critical-thinking competencies in the context of a report assignment.                                                                                                                                                                                                                                                                                  |                                                   |              |

| Genetic diseases of the metabolism are hereditary diseases resulting from a lack of activity or absence of a specific enzyme. Treatments could be the well renowned nutritional therapy. This course intends to study physiopathology of each of the metabolic diseases as well as their specific nutritional treatment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                   |              |

| This course examines the interactions between nutrients and drugs. It includes the basic concepts essential for understanding the interactions, and the specific interaction between nutrients and drugs most frequently prescribed in different pathologies. It also presents the influences of nutrients on the pharmacokinetics of drugs and their effects, and those drugs on weight, metabolism, and minerals. The course also treats equally the particular interactions between nutrients and drugs, especially in children, pregnant women or nursing mothers and the elderly. The course also includes a research project with a report on a theme that is consistent with the concept of the course, and a brief oral presentation of the topic. This course is based on fundamental concepts and provides the students with useful recommendations that will apply in practice. |                                                   |              |
| <b>NUT327</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Food-Drug interaction</b>                      | <b>1 cr.</b> |

| This course aims to introduce students to the different types of food service organizations and to guide them throughout the concept research and development process. It also offers the students the ability to closely look into menu planning, and the design, analysis and understanding of the different service operations including purchasing, receiving, storage, inventory, production, and service. Finally, it provides them with the necessary information in order to manage operational functions in food service: financial management, human resources and marketing.                                                                                                                                                                                                                                                                                                    |                                                   |              |
| <b>NTR335 - NUT335</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Nutrition in the Life Cycle</b>                | <b>2 cr.</b> |
| <b>Co-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | NTR211                                            |              |
| This course covers nutrition issues from preconception throughout life, with a particular emphasis on nutrition correlates of pregnancy, normal growth and development, infant and child nutrition, adolescent and elderly nutrition. It considers the role of nutrition in the context of the normal physiologic changes that occur with aging. This course will also focus on vegetarianism and its positive and negative aspects on health.                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                   |              |
| <b>NTR336 - NUT336</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Human Nutrition II</b>                         | <b>2 cr.</b> |
| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | NTR211 and BCH215                                 |              |

This course emphasizes on metabolic, biochemical and physiological processes related to nutrition. It focuses on the anatomy of the gastrointestinal tract and its function with respect to digestion and absorption. This course will address the interrelationships among the metabolic pathways that are common to the macronutrients, fluid and electrolyte balance as well as the macronutrients' exchange system.

**NTR338A-NUT338A Food Service Management and Community Internship 1 cr.**

**Pre-requisites** NTR334

**Co-requisites** NTR331 or GAA339

This 8 weeks rotation is coordinated through the university where internship placement for 2nd year students takes place. In the Food Service Management rotation, the intern will rotate through purchasing, inventory, food production, food service administration and management. During the Community rotation, the intern will have the opportunity to experience the role of a dietitian within a local community setting.

**NUT339 Food Community management practice 2 cr.**

These 3-4 week rotation of a minimum of 120 hours is coordinated through the university where internship placement for 3rd year students takes place. During the Community rotation, the intern will have the opportunity to experience the role of a dietitian within a local community setting.

**NUT340 Nutrition in the Lifecycle - Practice 1 cr.**

**Pre-requisites** NUT211 and NUT212

**Co-requisites** NUT342

This laboratory covers case studies and a practical exposure of nutrition conditions from preconception throughout life until the elderly age, with a particular emphasis on nutrition correlates of pregnancy, normal growth and development, infant and child nutrition, adolescent and elderly nutrition. It considers the role of nutrition in the context of the normal physiologic changes that occur with aging in addition to the main health conditions that may occur during these stages of life.

**NUT342 Nutrition in the Lifecycle 3 cr.**

**Pre-requisites** NUT211 and NUT212

This course covers nutrition issues from preconception throughout life, with a particular emphasis on nutrition correlates of pregnancy, normal growth and development, infant and child nutrition, adolescent and elderly nutrition. It considers the role of nutrition in the context of the normal physiologic changes that occur with aging. This course will also focus on vegetarianism and its positive and negative aspects on health.

**NUT345 Ethics and Nutritional Care Process 2 cr.**

The course cover the Nutrition Care Process and surveys all standardized nutrition terms for individuals depending of their health status ,and meets the requirements for completion of the dietetic internship according to the Accreditation Council for Education in Nutrition & Dietetics (ACEND) criteria.

**NUT347 Nutrition in Communities 3 cr.**

**Pre-requisites** NUT211 and NUT212 and NUT342

This course provides students in nutrition and Dietetics the necessary knowledge, tools and skills they require to evaluate and achieve community-based nutrition interventions that promote public health and prevent diseases among communities.

**NUT348 Food Festival Workshop 1 cr.**

**Pre-requisites** NUT211 and NUT212 and NUT342

This 1-credit course intends to raise students' interest on international food culture throughout the organization of an open Food Festival to be held on the University Campus. This course will fulfill organizational, managerial, evidence-research based information and communications skills necessary for student to hangover with dietetics practice among communities.

**NUT411 Clinical Nutrition I 3 cr.**

**Co-requisites** NUT412

This course focuses on all aspects required to prepare graduates for a comprehensive practice of dietetics through the Scope of Nutrition and Dietetics Practice and The Code of Ethics for the Profession of Nutrition and Dietetics via the implementation of the Nutritional Care Process for the evaluation, diagnosis, treatment and monitoring of various conditions related to nutrition.

**NUT412 Clinical Nutrition I Lab 1 cr.**

**Pre-requisites** NUT221 and NUT212

**Co-requisites** NUT411

This course focuses on all aspects required to prepare graduates for a comprehensive practice of dietetics through the Scope of Nutrition and Dietetics Practice and The Code of Ethics for the Profession of Nutrition and Dietetics via the implementation of the Nutritional Care Process for the evaluation, diagnosis, treatment and monitoring of various conditions related to nutrition.

**NUT425 Food Processing Principles and Applications 2 cr.**

**Pre-requisites** GAA340 and GAA378

**Co-requisites** NUT430

Food processing as a scientific and technological activity covers a broader area than food preparation and cooking. It involves the application of scientific principles to slow down the natural processes of food spoilage, and to provide convenience and a safe marketplace. This course introduces conventional and novel processing and preservation technologies. Sensory and nutritional implications of food processing will also be discussed.

**NUT430 Food Processing Principles and Applications- Practice 1 cr.**

**Pre-requisites** GAA340 and GAA378

**Co-requisites** NUT425

Food processing as a scientific and technological activity covers a broader area than food preparation and cooking. It involves the application of scientific principles to slow down the natural processes of food spoilage, and to provide convenience and a safe marketplace. This course introduces conventional and novel processing and preservation technologies. Sensory and nutritional implications of food processing will also be discussed.

**NUT431 Clinical Counseling Skills Workshop 1 cr.**

**Pre-requisites** NUT345 and NUT348

This course allows the students to practice their ability to nutritionally assess a patient using Anthropometric and Dietetic measures. Students must provide overall nutritional assessment of random patients. In order to provide appropriate nutritional and dietetic recommendations at the end of each assessment, students prepare their own learning material such as medical/nutritional brochures and samples of detailed healthy diets that can be followed by the patients after taking into consideration the patients' objectives and nutritional needs.

**NUT432 Sports Nutrition 1 cr.**

This course tackles the type of nutrition related to sports activities with a practical side concerning each person. It will cover the nutritional status of the athlete, his anthropometric measurements, energy needs in macro and micro nutrients .In addition, a part of the course will be assigned for the

nutritional preparation before and after the exercise for recovery. The rest of the course will cover the athletes weight changes , their food implications and the different ergogenic supplements.

**NTR433 - NUT433 Nutrition for Athletes 2 cr.**

**Pre-requisites** NTR322

This course tackles the type of nutrition related to sports activities with a practical side concerning each person. It covers the nutritional status of the athlete, his anthropometric measurements, energy needs in macro and micro nutrients. Furthermore, this courses includes the nutritional preparation before the exercise and after the exercise for recovery.

**NTR435 - NUT435 Preventive Nutrition and Public Health 2 cr.**

**Pre-requisites** NTR331

This course gives students the opportunity to understand nutritional public health, in addition to the tasks of nutrition professionals and the programs used to promote nutritional public health in the community. The course deals with public health problems with emphasis on alimentation and primary prevention of these problems by nutrition. It also shows the different types of foods linked to public health, together with the global strategies of preventive nutrition at an international level, adopted by the Organization of the United Nations.

**NUT439 Food service management Practice 2 cr.**

**Pre-requisites** NUT314

These 3-4 weeks rotation of a minimum of 120 hours is coordinated through the university where internship placement for 2nd year students takes place. In Food Service Management rotation, the intern will rotate through purchasing, inventory, food production, food service administration and management.

**NUT440 Managerial skills in dietetic practice 2 cr.**

**Pre-requisites** NUT345

This course will cover leadership and management skills for dietetic practitioners taking into account the competency standards. It will cover innovative practices covering business and entrepreneurship. This course will allow the students to develop their leadership skills and help them to be more confident in managing conflicts.

**NUT442 Clinical Counseling and Nutrition Assessment 2 cr.**

**Co-requisites** NUT447

**Pre-requisites** NUT471

This course examines in detail the various stages of clinical nutrition consultation. It allows students to improve their clinical approach towards the patient. It covers all parts of an ideal model of clinical nutrition consultation. Moreover, this course teaches the students how to deal with food in a positive way, to control the weight as well as to prevent health problems.

**NUT443 Clinical Nutrition II 3 cr.**

**Pre-requisites** NUT212 and NUT345

This course focuses on all aspects required to prepare graduates for a comprehensive practice of dietetics through the Scope of Nutrition and Dietetics Practice and The Code of Ethics for the Profession of Nutrition and Dietetics via the implementation of the Nutritional Care Process for the evaluation, diagnosis, treatment and monitoring of various conditions of nutrition-related diseases.

**NUT444 Clinical Nutrition II Lab 1 cr.**

**Co-requisites** NUT443

This course focuses on all aspects required to prepare graduates for a comprehensive practice of dietetics through the Scope of Nutrition and Dietetics Practice and The Code of Ethics for the Profession of Nutrition and Dietetics via the implementation of the Nutritional Care Process for the evaluation, diagnosis, treatment and monitoring of various conditions of nutrition-related diseases.

**NTR445 - NUT445 Current Topics in Food Sciences and Nutrition 0 cr.**

This course is designed to provide students with key concepts, current issues, researches and new trends that are pertinent to professionals working in nutrition, dietetics and food sciences field.

This seminar course is given by invited national and international key-speakers.

**NTR446 - NUT446 Pharmacology and Human Health 3 cr.**

**Pre-requisites** NUT222 and NTR223

This course covers the general pharmacology and specific Pharmacology. It introduces the students to the fundamental concepts, and to the usage of various drugs in the treatment of different diseases. Moreover, this course deals with different therapeutic classes of drugs that are frequently prescribed by physicians, and those that have been lately introduced into the drugs market involving preventive measures and practical and useful notices, such as impact of special food on some effects of drugs.

**NTR447 - NUT447 Pathophysiology of Nutrition Related Diseases 4 cr.**

**Pre-requisites** NUT222 and NTR223 and BCH215

This course enables students to understand the basic mechanisms of the genesis of these diseases and their clinical manifestations. It covers the definition of the pathophysiology, the concept of "nutritional diseases". This course allows the students to understand the signs and symptoms and clinical aspects of various diseases such as diabetes, dyslipidemia, cardiovascular problems and other.

**NUT448 Scientific Reasoning in Nutrition and Dietetics 2 cr.**

This course focuses on the scientific reasoning to give students a deep understanding of research from domain-general and domain-specific knowledge. This course aims at mastering student to convert scientific information into practice using argumentation, critical-thinking and communication skills. After completion of the course, students will be ready to exploit their competencies for academic writing, workshop presentation from evidence-based research in the field of Nutrition and Dietetics.

**NTR452 - NUT452 Medical Nutrition Therapy I 2 cr.**

**Pre-requisites** NTR336

**Co-requisites** NTR475 or NTR447

This course covers the nutritional strategies in situations of aggression and various diseases that may benefit from nutritional support such as lung diseases, neurological diseases, cancer, inborn errors of metabolism It aims to convey to students the basic pathophysiology of these diseases, their impact on nutritional status and nutritional value of measurements.

**NTR454 - NUT454 Medical Nutrition Therapy III 2 cr.**

**Co-requisites** NTR478

**Pre-requisites** NTR447 and (NTR452 or NUT452)

This course focuses on the medical nutrition therapy of several pathologies affected by nutrition. Bone diseases (osteoporosis, osteomalacia), allergies and food intolerances (celiac disease), anemia and other hematologic diseases that affect or are affected by nutrition, as well as digestive disorders (intestinal, pancreatic, and hepatic) will be discussed. In addition, a physiological, pathological, semiology and diagnostic overview will be presented.

**NTR453 - NUT453 Medical Nutrition Therapy II 2 cr.**

**Pre-requisites** NTR447 and NTR452

**Co-requisites** NTR476

This course will allow students to understand in detail the nutritional aspects of disease and its effect on the body, as well as the role of nutrition in the etiology, prevention and treatment of the following non-communicable conditions: weight management, diabetes, cardiovascular diseases, and renal diseases.

**NTR471 - NUT471 Clinical Counseling and Nutrition Assessment Lab 1 cr.**

**Co-requisites** NTR442

This lab helps the students translating the nutrition counseling theories and techniques into practices on different types of patients. It introduces the students to the practical recommendations related to different types of diseases such as diabetes, cardiovascular diseases, etc.

**NTR475 - NUT475 Medical Nutrition Therapy I Lab 1 cr.**

**Co-requisites** NTR452

This lab targets the acquisition of the medical terminology, estimation of energy needs of patients and diet composition as well as an overview of the new international Exchange System. Furthermore, it handles case studies in which special diets and recommendations are necessary for the following situations or pathologies: pulmonary diseases, cancer, AIDS etc....

**NTR476 - NUT476 Medical Nutrition Therapy II Lab 1 cr.**

**Co-requisites** NTR454

This course will allow students to understand in detail the nutritional aspects of disease and its effect on the body, as well as the role of nutrition in the etiology, prevention and treatment of the following non-communicable conditions: weight management, diabetes, cardiovascular diseases, and renal diseases.

**NTR478 - NUT478 Medical Nutrition Therapy III Lab 1 cr.**

**Co-requisites** NTR454

This course focuses on the medical nutrition therapy of several pathologies affected by nutrition. Bone diseases (osteoporosis, osteomalacia), allergies and food intolerances (celiac disease), anemia and other hematologic diseases that affect or are affected by nutrition, as well as digestive disorders (intestinal, pancreatic, and hepatic) will be discussed. In addition, a physiological, pathological, semiology and diagnostic overview will be presented.

**NUT481 Food and social media 2 cr.**

This course will introduce the students to current knowledge related to the influences of mass media on young population. In addition, it will enhance evidence-based understanding of the impacts of social media on young people's health and wellbeing. Students will be able to analyze the diverse uses of social media in the current health and nutrition field.

**NUT482 Basic Concepts in Nutritional Genomics 2 cr.**

Diet is a key environmental factor that affects the incidence of many chronic diseases. Nutrigenomics is an emerging discipline that studies how diet influences the expression of genetic information, or how each individual interacts with, and responds to environmental factors. This course presents nutritional genomics concepts, as well as functional genomics techniques and strategies applied to nutritional disease prevention. Upon completion of the course, students will acquire fundamental concepts of technologies and strategies to understand nutritional genomics research approaches and the complex gene-nutrient or gene-gene interactions and their link with human diseases.

**NUT507 Dietetics Seminar 2 cr.**

This course offers opportunities to students to develop their critical-thinking, communication and argumentation skills. Students will apply their scientific reasoning competencies acquired during the course NUT443. Assignments, self-report and oral presentation will be the major activities of this course to apply all necessary communication and reasoning competencies for entry-level dietitian.

**NUT510 Clinical Nutrition III 3 cr.**

**Pre-requisites** NUT443

This course focuses on all aspects required to prepare graduates for a comprehensive practice of dietetics through the Scope of Nutrition and Dietetics Practice and The Code of Ethics for the Profession of Nutrition and Dietetics via the implementation of the Nutritional Care Process for the evaluation, diagnosis, treatment and monitoring of various conditions related to nutrition.

**NUT511 Clinical Nutrition III Lab 1 cr.**

This course focuses on all aspects required to prepare graduates for a comprehensive practice of dietetics through the Scope of Nutrition and Dietetics Practice and The Code of Ethics for the Profession of Nutrition and Dietetics via the implementation of the Nutritional Care Process for the evaluation, diagnosis, treatment and monitoring of various conditions related to nutrition.

**NTR512 Advanced Food Service Management 3 cr.**

This is an advanced course of food management to complement undergraduate training .It encloses all necessary management notions to effectively direct food establishments (hotels, restaurants, diet centers...). This course details managerial and operational concepts essentials to food service management i.e. Marketing, finance, human resources and Leadership.

**NTR514 Advanced Nutrition: Macronutrients and Micronutrients 3 cr.**

This is a master course shedding a more in depth look at the metabolism of certain nutrients as well as practical course that allow students to research and present the recent literature on main topics.

They will deeply understand the nutritional aspects of diseases and its effect on the body, as well as the role of nutrition in the etiology, prevention and treatment of non-communicable/communicable diseases.

**NUT543 Writing Skills in Current Topics in Food Sciences and Nutrition 1 cr.**

**Pre-requisites** NUT448

This 1-credit course is designed to provide students with key concepts, current issues, researches and new trends that are pertinent to professionals working in nutrition, dietetics and food sciences field. This seminar course is given by invited national or international key-speakers.

**NTR545 Advanced Topics in Food Sciences and Nutrition 0 cr.**

This course is designed to provide students with key concepts, current issues, researches and new trends that are pertinent to professionals working in nutrition, dietetics and food sciences field.

This seminar course is given by invited national and international key-speakers.

| Health programs are usually implemented to achieve specific outcomes by performing some type of intervention or service. While evaluation may be performed for a variety of reasons, most are conducted to answer two fundamental questions: is the program working as intended? And second, why is this case? Evaluations help decision makers, program managers and other groups to understand the reasons for program performance, and to make informed judgment about improving a program, extending it to other sites, cutting back or abolishing a program so that resources may be allocated elsewhere. In essence, evaluation is a management tool for administrators, planners, policy makers and other health officials.                                                                                                                  |                                                                 |              |
| <b>NTR658</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Public Health in Lebanon</b>                                 | <b>3 cr.</b> |
| The course examines policies, legislations, institutional organization, competent authorities, and liability as they relate to public health sector in Lebanon. It also emphasizes on the practical application of community health research to enhance the practice of public health in the Lebanese community.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                 |              |

| The thesis study is a research project on a topic chosen in agreement with the tutor and approved by the thesis topics evaluation committee of the department of nutrition. The proposal must include the subject's background, purpose, research questions, and methods, preparation of the study, time, statistical analysis, and bibliography. The paper includes a literature review and research practice. It measures the level of students' knowledge, their capacity for analysis and presentation. The student must submit a final written report with a theoretical part, a practical study, followed by an analytical part, conclusion and recommendations. He defends his thesis before a jury. It must then also write an article based on his thesis and present a Poster. The time allowed for this study is 2 semesters, renewable. |                                                                 |              |

| This study examines the different concepts of time and of multiple dimensions. It seeks to write the history of the origins of the calendar and the seasons in general. This study presents the liturgical year in each Eastern rite, its structure, characteristics and spirituality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                     |              |

| This course focuses on the liturgical community, and how liturgy celebrates the faith of a community as it was the case for the first Christian communities. To the extent that the community is "liturgical" and alive, its liturgy will be meaningful and will be the "incarnation of the Church". The celebration of the paschal mystery opens to communion and sharing, and makes the sanctifying Spirit active in the lives of Christians. There is, therefore, a logical sequence between the paschal mystery, Christian worship, liturgical assembly and Christian life leading to the incarnation of the Church.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                     |              |
| <b>OCSR35.00</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Law of Praying Law of Believing</b>              | <b>2 cr.</b> |
| This is a course that analyzes and comments on the famous saying: Lex Orandi, Lex credendi, "the law of prayer is the law of faith", and offers a preliminary explanation of the meaning of "liturgy" that will be followed by three illustrations of the saying.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                     |              |

| This course is a panoramic overview of music and sacred dances in the world. These music and dances are closely related to religious and ritual celebrations and are an expression of faith and prayer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                     |              |

| God has established marriage by "creating man and woman" that owes nothing to the state or to the Church. It is a natural institution called "customary marriage": a union based on marriage and family more than on formalities. Even for the chosen people, marriage is an earthly reality. The Church, in turn, believes that "marriage has God as its author. It was from the beginning as a figure of the Incarnation of the Word of God". The Vatican does not diverge from this biblical vision. This course examines the development of the celebration of marriage throughout history.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                     |              |

| The course is presented through a liturgical, historical and theological perspective. The first part considers the historical and liturgical development of the parts of the Mass, through the various Eastern liturgies, and distinguishes between the Antiochian and the Alexandrian structure. The main parts of the Mass will be detailed. A major importance will be given to the anaphora.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                     |              |

| The sacrament of the priesthood completes the work of Christ in his church to care for man and develop him through the service of the sacraments and through the functions of teaching, sanctification and management. In the times of weakness, sickness, pain, and even conflict, the Christian faith comes to light up a new flame of hope through the secret of healing. The human being is reminded that he is carefully covered by God and reveals the God of love and forgiveness that accepts man as he is. He invites him to accept himself with sincerity and humility, and to work with her ability to renew his life. In the mystery of repentance, Christ touches the believer's heart, and the transformation takes place. In the sacrament of the sick, we see the presence of the healing and sincere power of Christ, the patient feels the continuity of the love of Christ represented by the presence of the Church beside him. The disease does not negate the love of God to man, but it reveals this great mystery, it is discovered that this love expresses the act of faith. |                                                     |              |

| This course is an introduction to pastoral theology. If theology was the Christian faith in search of its intelligence, the theological disciplines that offer theology students the keys to the broad "Science of God" and to its salvation in the world would be numerous and various. Pastoral theology is one of these disciplines, but with the distinction of being more oriented towards the Christian praxis which brings together the different aspects of the Christian faith and its various transmissions in communities, parishes, groups, catechesis or others. The Christian experience is understood at this point as a "response" to the Word of God received by Revelation and "recovered" in the Tradition. This experience is "imposed" in pastoral theology in a                                                                                                                                                                                                                                                                                                                  |                                                     |              |

theological place where intelligence of the Christian faith occurs. This discipline, as entitled in this course pastoral, covers two levels of thinking and research; the first "empirical" and the second "applied".

Among the Greeks, nature is physical, all of which appears; hence the problem of natural, supernatural and the supernatural. In Christian theology, nature is one; hence the problem of the two natures of Christ. In Latin, natura is "character", which poses the problem of nothing less than human nature. In the medical sciences, nature bounds genetics. In law, it opposes the Civic. In literature, he opposes romanticism and classicism. Today, ecology seems to oppose nature and man; it is even about "green policy" as of 'ecological theology,' 'brief' 'ecological philosophy.'

Nature is everywhere, but is the concept of nature he said the same thing everywhere in all areas? What is then "nature"? Will he act or nature? An act or nature? And why is his definition a hermeneutical problem? That's what our course will try to address.

The course objective is to study the concept of "nature" existing on a platform of ideas from different fields, such as physics, metaphysics, theology, psychology, genetics, law, literature, and ecology, without however being well-defined.

**PAC201-2 / PAC303-4 / PAC405 Accompaniment Practice I - II - III - IV - V 1 cr.**

This course offers an introduction to the many particular skills that the professional accompanist needs, including:

- knowledge and experience in duo repertoire and chamber music
- competencies in sight-reading and transposition
- experience in playing for choir rehearsals
- experience in vocal coaching
- experiences in orchestral accompaniment

**PAC406 Accompaniment Practice VI 2 cr.**

This course offers an introduction to the many particular skills that the professional accompanist needs, including:

- knowledge and experience in duo repertoire and chamber music
- competencies in sight-reading and transposition
- experience in playing for choir rehearsals
- experience in vocal coaching
- experiences in orchestral accompaniment

**PHI201 Introduction to Philosophy 3 cr.**

The course will introduce students to philosophical thinking and practice. It will cover, on the one hand, the main philosophical currents, highlighting their specificity and their creative input and, on the other hand, the most representative authors in the history of philosophical thought. In an effort not to separate these themes and the fundamental questions of mankind, the course attempts to show the relationship that develops between the aforementioned notions, with the aim of addressing their impact on certain world views that constantly interpolate us within contemporary societies.

**PHI210 Greek Philosophy 3 cr.**

This course is divided into two parts: the first part examines pre-Socratic sources that give students the proper tools to acquire philosophical thinking in their quest for the nature of things, and in their attempt to unveil both natural and human phenomena. It thus includes the main schools of thought such as the School of Miletus (Thales, Anaximander, Anaximenes), the Pythagorean school (Pythagoras), the Ionian school (Heraclitus), the Eleatic school (Parmenides), as well as the Sophists. The second part deals with Socrates, Plato and Aristotle.

**PHI301 Medieval Philosophy 3 cr.**

**Pre-requisites** PHI210

This course is designed to analyze the highlights of the thought of St. Augustine, St. Thomas Aquinas and Meister Eckhart. We seek, from the analysis of the Augustinian singular experience of truth, to understand in depth the issues relating to the problem of knowledge, the metaphysics of inner experience, the self-certainty based on the truth of God inherent in our interiority, temporality and eternity and the unitive and tripartite constitution of the same soul to the constitution of the Trinitarian life in God. We will study, starting from a critical reading of the writings of St. Thomas, the themes related to the receipt of Thomistic Aristotelian heritage, the question of creation and the evidence of the existence of God, the question of analogy and the problem of knowledge. A contemporary reading of the mystic Meister Eckhart, which largely contributed to the emergence of German philosophical speculation, will be analyzed as well. The research will, at this level, tackle Eckhart's unitive structure of knowledge and life, that animates the vital relationship between God and man.

**PHI325 Philosophical Reading 3 cr.**

An analytical and critical reading of a philosophical text in its entirety is a necessary and formative exercise. After an introduction to the author and his work, and in context of the work in question, a reading workshop, directed and supervised by the teacher, will develop around the statements of work, comments and thematic overviews, for the establishment of a reference file. The workshop will be provided each semester by a different teacher, for a greater variety of approach. The work chosen by the teacher in charge of the course generally will correspond to its competences. It must, however, be a major and referential work in the history of thought. A list of authors will be established for this purpose, such as Plato, Aristotle, Augustine, Descartes, Kant, Hegel, Nietzsche, Heidegger, Husserl, Arendt, Derrida, Merleau-Ponty, etc. The work chosen will be announced at the beginning of each semester.

**PHI327 Philosophical Anthropology 3 cr.**

**Pre-requisites** PHI210

The question "What Is Man?" is at the heart of philosophical questioning. Starting from the anthropocentrism need of philosophy, the course firstly explores the meaning of the question about the essence of man through its history, the challenges imposed by the cyborg, the computational world or gender theory (Gehlen, Leach, Butler, Blumenberg, etc.). The course questions the difficulties of defining the human being through current changes by building on the thinkers of classical humanism and post-humanism. Secondly, the course presents the basic categories of philosophical anthropology and offers a thorough analysis of the being-in-relation (or the human being-in-relationships) and discussion of political, social and cultural implications, with reference to contemporary thinkers of otherness (Levinas, Buber, Marion, etc.)

**PHI333 Modern Philosophy 3 cr.**

**Pre-requisites** PHI301 or PHI210

The students will be introduced to two great philosophical currents, both stemming from the works of Francis Bacon, rationalism (Descartes, Leibniz and Spinoza) and empiricism (Locke, Condillac, Hume), leading to Kant's philosophy of knowledge - critical rationalism.

**PHI375 Internship 3 cr.**

The purpose of the course is to propose several approaches to the current teaching of philosophy in high schools, and to highlight the various and complex problems specific to this area. It is divided into three parts: the first is an appropriation of various acquired theories relative to the plan of pure didactics. The second is an appropriation of the acquired theories related to the specialized philosophy didactic. The third is testing these theories acquired by a teaching internship in schools, which confirms the skills already acquired by the student concerning both pedagogical and philosophical plans.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                          |              |

| This epistemology course centers around a double axis: firstly it tackles the gnoseological question with an inquiry into the genesis of knowledge or the basic stages of the transition from anthropomorphism to anthropocentrism (Kepler, Galileo, Newton). Secondly it tackles methodology in reference to exact sciences and deals with the requirements of the elaboration of a scientific method: its different stages, the means it uses, in order to avoid, overcome or circumvent all sorts of epistemological conundrums that stand in the way of an objective scientific progress (Bachelard, Popper), with a thorough critical study of the validity of its founding criteria (Wittgenstein).                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                          |              |

| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | PHI333                                   |              |
| This course initially outlines a perspective of language as an object of study that shows how much of the philosophy of the twentieth century developed as a "philosophy of language" (Analytic Philosophy). Secondly it deals with the general theoretical framework of the argument as a discursive act, based on the theory of acts of language (speech acts), that the two philosophers Longshaw John Austin and, later, John Searle paved the way for. Thirdly, general issues related to logic are discussed, and are treated by the induction and deduction master concepts - truth and validity. A brief discussion is given on the methods and endorsements of formalization. The formal approach is exemplified, when it comes to conducting the analysis and evaluation of simple deductive arguments, called syllogism.                                                                                                                                                                                                                                                                                                                 |                                          |              |
| <b>PHI433</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Far-Eastern Philosophy</b>            | <b>3 cr.</b> |
| The course is divided into two parts: the first part educates students to draw their knowledge from the sources of Far-Eastern philosophy and enhance their knowledge of the cultural environment therein. The second part allows students to comment on a range of texts relating to the two Chinese and Hindu traditions: LaoTse, Confucius, the schools and sacred writings of Indian Brahmanism, Buddhism and Vedanta.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                          |              |

| The purpose of this course is to present a reflection on metaphysics and its relation to primitive philosophy, which discusses, for example, "The science of Being as Being." It is divided into three areas. The first focuses on Aristotelian metaphysics. The second reflects upon the problems of the world, the soul and God, from the analysis of two antithetical philosophers, Leibniz and Spinoza. The third examines the different theories of the nineteenth and twentieth century, taking an in-depth look into the philosophies which were eager to put an end to metaphysics; philosophies which are attributed to Kant, Nietzsche, Heidegger and Habermas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                          |              |

| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | PHI210                                   |              |
| The course aims to consider a reflection on the foundations and the meaning of democracy, in order to find the place of morality in politics; knowing that the two concepts "moral" and "politics" are written mostly in separation rather than in conjunction. This is how we can understand the great debates relative to moral and political philosophy, from the ancient Greeks - particularly those of Plato and Aristotle - until modern or contemporary times. Starting with an approach to these two concepts, the course is essentially questioning, on one hand, the need for the interaction of these two areas of morality and politics, and also that of their separation. Students will analyze in-depth the answer to these questions by drawing on texts of classical and modern philosophers such as Plato, Aristotle, Kant, Machiavelli, Thomas Hobbes, Max Weber, Hannah Arendt and Julien Freund, who have pondered this topical issue.                                                                                                                                                                                         |                                          |              |

| The course of Arab-Muslim philosophy is envisaged in the form of problems: the theory of Knowledge - the topic of Reason in Arab-Muslim philosophy and the question of the compatibility of Reason and Faith (Mu'tazila, Ibn Tufayl, Ibn Rushd); God - the traditional proofs of his existence and attributes (Ibn Sina); the Universe - the hierarchy of beings, creation or non-creation of the world (Ibn Sina, Ghazali, Ibn Rushd); morality and politics (Al-Farabi); sociology and history (Ibn Khaldûn); and the Mystique (Ibn 'Arabi, Al- Hallaj).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                          |              |

| The course covers the range of religious sects and trends that have marked the history of Islam. The focus will be on the Umayyad and Abbasid periods that experienced the early schism in Islam within the divergence of views, in conjunction with the mastery of the profound meaning of the Qur'an, the invitation of the Prophet, the authenticity of the hadith, etc.; and the notion of government and the dimension of legality, frequently confused with moral and religious legitimacy. As a first step, the course covers the schools born at a pivotal moment in the history of Islam: the Kharijites, the Qadarites the Mu'tazilites, the Ash'arites, etc. Secondly the course will deal with ijthihad, the tqalide among Maliki, Hanbali, and Hanifites Shafi'is on the Plan Sunni Islam, and Shi'ite strategy, Ja'fari, 'Alawite, etc., on the plan Shia Islam. The work will focus on this project of studies and interpretations relating to the concept of power in Islam. Wide room for manoeuver will be reserved for fiqh, the kalam, the allegorical exegesis, and falsafa - globally and within the framework of the course. |                                          |              |

| Having originated within the context of biblical interpretation, hermeneutics was freed from its dogmatic and institutional limits to become a discipline that mediated and reconciled stylistics, trans-linguistics, word-for-word linguistics and dissertation analysis, as well as a reading of the world as text. It is the restoration and disclosure of meaning that interprets and identifies the significance of the written and spoken word. The course traces the journey that this discipline has made from Schleiermacher to Ricoeur, as well as Dilthey, Heidegger, Gadamer, Szondi, Jaussand and Appel.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                          |              |

| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | PHI333                                   |              |
| This course aims to analyze the truth systems constructed by Fichte, Hegel, Schelling and the great fundamental institutions that structure all idealist comprehension of the truth. This course will be divided into three parts. Firstly we will study Fichte and his vision of the fundamental task of philosophy. In this manner, we will look at the themes of the self-awareness, the Being and the Apparition according to his masterpiece "The Science of Knowledge" of 1812, and we will also examine Fichte's three images of the Absolute and philosophy of religion, as they are developed in "Die Anweisung zum seligen Leben oder auch die Religionslehre". Secondly, we will read "The Phenomenology of Spirit" of Hegel, which is based on the major philosophical orientations that form the systematical structure of the truth. The main analysis is over the dialectic of knowledge and the three                                                                                                                                                                                                                               |                                          |              |

moments of the autorealisation of the Spirit: Art, Religion and Philosophy. Lastly, we will study the evolution of Schellingian thought from 1801, with the emergence of the philosophy of absolute identity - until Schelling's intermediate philosophy in Stuttgarter Privatvorlesungen.

| <p>The course focuses on two distinct but complementary parts. The first socio-political and historical part is the source of modern Arab thought, born in the Ottoman Middle East, of language and Arab cultural heritage. At the origin of this modern thought, expressed in the Arabic language and in the service of the promotion of the Arab society, are Lebanese Christians, mostly, and in particular, Syrian and Egyptian. New concepts circulate, such as "tolerance", "freedom", "equality", "brotherhood", "citizenship", etc., allowing the contribution of new transnationalistic, Arabic and nationalistic ideas, operating progressively in favor of the introduction of a democratic political regime that would terminate the dictatorship and the cult of "me" politically translated into a sultanate recognized as the shadow of God on earth. The second part focuses on the emergence of a political, socialist, communist, progressive, Baathist, Nasserist, and democratic thought; work of the enlightened Christians and Muslims in the Arab world in search of a new national ideology, which tried to contribute to the emergence of a state concept, an identity that includes all the components of a national community and a political philosophy capable of challenging the rapid changes within the global plan. The aim of the course is to enable students to grasp the dimension of Arab thought outside the religious framework that limits the concept of state and denies democracy the right to be admitted.</p> |                                                        |              |

| <p>The main objective of this course is to study phenomenological thought in two particular ways. The first one analyzes the principles of phenomenology, in the manner elaborated by Edmund Husserl. The second one brings to light the numerous manifestations of the phenomenological practice and its particular development by the French phenomenological school, which is essentially represented by M. Merleau-Ponty, J. Derrida, E. Levinas, M. Henry and J.-L. Marion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                        |              |

| <p>Starting with the knowledge of Existentialism, "Kierkegaard, Heidegger and Sartre", the course initially questions their take on existential and "existential" philosophy, on contemporary thought, as well as on the distinction between Heidegger's philosophy and that of Sartre. Secondly, the course discusses major ontological questions raised by Existentialism such as freedom, anxiety, responsibility, death, and God. Finally, the course examines how structuralism in its foundations (Lévi-Strauss, Michel Foucault), presents itself as a critique of Existentialism.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                        |              |

| <p>This course introduces students to a philosophical reflection upon the concept of society. Firstly, it attempts to identify the origin of society, through the problem related to the two corollary concepts of nature and culture. Secondly, the course tackles factors maintaining a social link, explaining the relationship between the state as artifact according to Aristotle, and political societies. There are thus different possible societies such as the individualistic society, communitarian society, holistic society, closed society, open society, etc. Finally, starting from a general approach to social institutions, the course questions the concept of distributive justice and what follows as a dilemma between procedural justice and communitarian justice; which leads ipso facto to a topical problem, that of justice as a social, political and legal recognition.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                        |              |

| <p>The study of the will in philosophy focuses on the main question: To what extent is volition a free act? If the will expresses a complex dynamism that translates a pluralistic complicity between one or more desires or needs with any other discernment, to reach a decision, the transition to the act or the gratification of the desire is not always the product of a pure rationalization. Indeed, the study of philosophical texts of the post-idealistic period of Schopenhauer to Ricoeur, through Nietzsche and Freud, marks out the itinerary of a volition, which is affirmed by excess. So first, we ask the question of the historical development of wanting and not wanting, since antiquity to the present day, focusing on the analysis of the mystical and psychological approach of the term. Secondly, we deepen the philosophical contributions of the Romantics and contemporary philosophers concerning volition as a free and premeditated act. Thirdly, we examine the issue of will, as it has been treated by any philosopher of modern and contemporary times.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                        |              |

| <p>This course focuses on a revisit of the issue of dialogical philosophy and its impact on the intercultural encounter and reciprocity. Its purpose is to show that no cultural entity can monopolize the space of the historical manifestation of the truth. It covers five specific areas: an attempt to define interculturalism in the era of global pluralism; a focused discussion on the controversial thesis of the clash of civilizations; a tight confrontation between the East and the West in what it conveys as essential and indispensable in terms of constitutive elements, intrinsic aspirations and repressed potentialities; a trial of the philosophical foundation of the concept of dialogue, with preferential reference to the thought of Martin Buber; an open debate on three controversial topics of multiculturalism, namely the universality of human rights, global citizenship and Eurocentrism. The basic philosophical presupposition that underlies the entire development of these areas is the realistic perception of pluralism of acts required to the critical analysis of reason, which assumes the meaning in its various interpretations.</p>                                                                                                                                                                                                                                                                                                                                                                    |                                                        |              |
| <b>PHI516</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Philosophy of Art</b>                               | <b>3 cr.</b> |
| <p>The purpose of this course is a reflection on art and the values of beauty. Firstly, it studies the concept of the autonomy of art according to Kant, based on the criteria of beauty. Secondly, it deepens the concept of heteronomy of art, unique to the School of the German Romantics - Schlegel, Novalis, Tieck, etc. Thirdly, it analyzes the dual aspect of autonomy and heteronomy of art in Schiller's concept.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                        |              |

| <p>The purpose of the course is to delimit the meaning of the concept of love which finds its roots in the etymology of the word "philosophy" where the prefix "philein" is translated as love. It is divided into three parts. The first examines the relationship between the two terms "philein" and "philos". The second examines the concept of love through relational philosophy; showing that if the experience of love is precisely one of the communication of consciousness, with the idea (Plato) that of the triad Eros - Philia- Agape, revealing the problem of communication of consciousness. The third component establishes a critical analysis of the highlights of the metamorphosis of love in its dialectical relation to the forms of art.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                        |              |

| <b>PHI650</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Phenomenality of terrorism and natural right</b>               | <b>3 cr.</b> |
| The emergence of the terrorism phenomenon nowadays puts at risk the organization of a human world. Whether it is not rational in itself, its conditions of use remain rationalized. It is often a pure instrument, a mode of action in the service of a project. It is obvious that terrorism is outside the scope of law. This is at first to wonder about the possibilities of flouting the law in the name of a certain vision of natural law, the right to life, to existence, the right of every populace to have a state, a territory. Secondly, the required possibilities will be addressed to reconsider the concept of peace culture which has foundations that philosophy and humanities can be uncovered.                                                                                                                                                                                                                                                                                                                                       |                                                                   |              |
| <b>PHI596</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Philosophy Project</b>                                         | <b>3 cr.</b> |
| This training activity is intended as a seminar whose ultimate goal is to have the students devise a research project in the field of philosophy. The seminar is linked to all the teachings and especially to social science research methodology. Students are supported during the course, to the realization of the first steps in the construction of their research projects. The main object assigned to this seminar is to build a research project, which will be finalized in the Dissertation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                   |              |
| After attending the seminar, the students are required to submit a final written project (20 typescript pages). Epistemology forms part of the course. This is a study of the concepts and methods of the various currents of modern epistemology, which originated in the early "epistemological breaks" that separate the pre-scientific period of the classical rational science and highlight their implications in the renovation of the statuses of science, epistemology and the history of science.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                   |              |
| <b>PHI671</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Philosophy and Communication</b>                               | <b>3 cr.</b> |
| The course aims to deepen the principal mutations in the philosophy of communication from the twentieth century and to develop critical reflection of the media. It covers two areas. Firstly, it interrogates the meaning of this new "paradigm" of contemporary philosophers who revisit the problem of truth in a post-metaphysical context (Jean-Marc Ferry). Hence the relationship of this new philosophy to analytical philosophy. Secondly, it studies the issue of communication and, more precisely, contemporary communication, through its various aspects, namely communication and relationship, communication and intersubjectivity, philosophy media, the Internet and new mass media. It places the media in contemporary culture, hermeneutical theory and the main methodological tools, criticism of cultural industries and reflexive appropriation of symbolic imagery, etc.                                                                                                                                                          |                                                                   |              |
| <b>PHI681</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Philosophy and Religion</b>                                    | <b>3 cr.</b> |
| The course focuses on the study of the complex relationships between philosophy and religion. Considering philosophy as reflexive, essentially rational attitude, and religion as a belief in the sacred and the supernatural, which can only be grasped by privileged people and appropriate methods, it releases the essential characteristics that marked the historical relations between the two religious and philosophical currents, thereby allowing them to define a position of principle regarding their mutual relations. Three components underpin this course. The first analyzes the fundamental aspects of philosophy, as human work and relative truth. The second explains the features of religion, revealed as the work of God and absolute truth. The third examines the reciprocal relationship between these two areas, and identifies the principled position of philosophers and theologians faced with the problems raised by the binomial Faith and Reason.                                                                      |                                                                   |              |

| How to orient ourselves in the political world? Several specific courses regarding the various problems of political philosophy answer this question over more than one plan. A reasoned array of themes relevant to modern and contemporary political philosophy, are offered every year, alternately by professors and specialists in political philosophy. Each develops, according to their competencies, a problematic to look at with their students, covering: contractual and contractual theories, pure theory of law, pure law, natural law and positive law, legitimacy and legality, distributive and commutative justice, power and abuse of power, state and revolution, a phenomenological conception of state, etc.                                                                                                                                                                                                                                                                                                                         |                                                                   |              |
| <b>PHI683</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Philosophical Approaches to Phenomena - Limit of Existence</b> | <b>3 cr.</b> |
| The studies conducted in the framework of the rotating courses related to a specific thematic focus of phenomenology, are located in the most ample philosophical horizon of contemporary phenomenology. Each issue relating thereto is treated each year according to the choice of the researcher, the Professor in charge of the course. This main axis, around which rotate the tonalities of various courses, focuses on the study of phenomena-limit of existence. They specifically refer to the primordial events of life and affective tonalities fundamental to existence, which manifest an excess of sense and experience, overwhelming any representation made by a reflexive and intentional consciousness. Of these borderline phenomena revealing "phenomenality saturated and saturating" we quote: God, the world of life, transcendental birth, death, anguish, transcendental emotions, living flesh, live temporality and eternity, suffering, love, the experience of the other or the ethical paradox as well as the esthetic truth. |                                                                   |              |
| <b>PHI135</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Ethical Issues: Moral Doctrines of Religions</b>               | <b>3 cr.</b> |
| This course studies the difference between man and animal then proposes a challenge to the human nature. It examines the question of man and human nature that seeks to determine if the man is the product of nature or culture. It also analyzes the problem of the plurality of cultures and the unity of humankind.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                   |              |

| Students will understand the different optical terms used in photography. They will be able to identify formulas used generally in photography. They will acquire the necessary terms used in photography and communicate with professionals using them accordingly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                   |              |
| <b>PHO235</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Introduction to Photography Story-telling</b>                  | <b>3 cr.</b> |
| Students will acquire techniques and tools to produce still images with sound tracks. Students will apply these techniques on a visual and audio project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                   |              |

| This course introduces students to the principles of producing quality digital prints. Topics include color balance, color temperature and the psychology of color. The students will also explore the expressive and aesthetic aspects of digital color photography                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                   |              |

| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | PHO202 Or PHO447                                                  |              |
| Students will gain an appreciation and understanding for the fine art of photography through the study of basic photography skills and concepts. Students will start with a digital unit emphasizing composition and color. Students will also learn to operate and manipulate a 35mm SLR camera along                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                   |              |

with black & white film processing and printing in the darkroom. In addition, students will experiment with hand-tinting, multiple images and computer manipulation with Photoshop. Students will also learn various presentation techniques including dry mounting with a hot press and mat cutting.

**PHO463 Landscape Photography 2 cr.**

**Pre-requisites** PHO202 Or PHO447

Students will acquire the know-how of photographing natural and cultural aspects of landscapes and will develop a portfolio of digital photographs.

**PHO464 Architecture Photography 2 cr.**

Students will demonstrate understanding of volume, texture and form. Students will implement techniques acquired through hands-on assignments.

**PHY210 - PSC210 General Physics 3 cr.**

The objective of this course is the introduction of various laws, principles and physical mechanisms, whose understanding is essential to students pursuing studies in various branches of science. This course consists of several independent parts. The first one deals with dynamics, the different types of motion, Newton's laws, and conservation of energy. The second part deals with hydrostatics and fluid dynamics. The third part deals with thermodynamics, calorimeters, the first principle and the basic transformations, the ideal gas, and thermodynamic cycles. The fourth part concerns the analysis of simple electrical circuits using Kirchhoff laws and the movement of a particle in an electromagnetic field. In the fifth part we talk about relativity, the theory of photons, and the photoelectric effect. Upon completion of this course the students will have acquired sufficient knowledge of several basic principles in physics and be familiar with these various topics.

**PHY211 Fundamentals of physics for life sciences I 3 cr.**

The objective of this course is the introduction of various laws, principles and classical physical mechanisms, whose understanding is essential to the student in pursuing his studies in various branches of science especially in the medical field. To this end, this course consists of several independent parts. The first one deals with mechanics including kinematics of a particle, the laws of motion, work, energy, momentum, collision, rotational mechanism and rotational dynamics. The second part deals with solids and fluids including pressure, Buoyancy, surface tension, capillary and fluids in motion. The third part deals with heat and gas dynamics including the first and second law of thermodynamics. Finally the fourth part concerns vibrations and wave phenomena including sound. Upon completion of this course the student will have acquired sufficient knowledge of several basic principles in physics and is familiar with these various topics.

**PHY215 Optics and Modern Physics 3 cr.**

The goal of the course is to introduce, first, geometric optics to study the phenomena of light and the behavior of the light beam passing from one medium to another. In the second part we will study the acoustic wave model to understand the propagation of vibrational waves and their overlays. In the last part, the course gives an introduction to basic concepts of relativity. This course is designed to educate students in the process of scientific discovery in general and the important role of experimentation in the development of scientific models of nature.

**PHY270 Laboratory of General Physics 1 cr.**

**Prerequisites** PHY210 - PSC210

The physics lab provides students with a unique opportunity to test theories and scientific laws and initiates them into the methods and techniques of measurement that are the basis of these theories. In the laboratory, the students learn the limits in the application of theories and the importance of experiments in the evolution of concepts and theories. The following experiments are carried out: metrology in mechanics, Wheatstone bridge, ideal gas law, water-vapor latent heat, Venturi tube, study of a magnetic field, Michelson interferometer, Stephan-Boltzmann law, and a study of the centrifugal force.

**PNO303 Piano III 2 cr.**

**Pre-requisites** MPR402 Or MPR323 Or MUP202 Or PNO202

**Exercises:** -SCHMIT and then Hanon (No. 21-31)

**Scales:** -major and minor with arpeggios + inversions and in opposite direction over 2-3-4 octaves + chromatic scale starting with each note.

**Studies:** -CZERNY Op. 849 "studies of the mechanism" (10 studies)  
- CZERNY "Small velocity" Op. 636 (12 studies)

**Bach:** -"Small Preludes and Fughettas", only the preludes (at least 8 preludes)

**Pieces:** - "From Bach to the Present Day" volume II, III.  
- les classiques favorites, volume II  
- SCHUMANN "Album for the Young" op. 68  
- PROKOFIEV "Music for Children" Op. 65 No. 1-2-3-5-6-10-12  
- KHACHATURIAN "Children's Album" No. 1-2-3-4.  
- KABALEWSKI "Plays for Children" Op. 27 (No. 8 up to 16)  
- TSCHAIKOWSKI: "Children" Op Album. 39  
- BARTÓK: Mikrokosmos book 3 - For Children Book I.  
- "Piano Pieces for children"  
- CHOPIN: Mazurka op. 68 no 2 - 3.

13 Pieces per course + 2 sonatinas (one of Beethoven and one of Clementi)

**PPB201 Public Performance I 1 cr.**

The student, guided by a teacher, must give a public performance in which he/she is to demonstrate an interpretation of quality with a certain degree of musical maturity.

**PPB202 Public Performance II 2 cr.**

The student, guided by a teacher, must give a public performance in which he/she is to demonstrate a high-standard of interpretation and a high-level degree of musical maturity.

**PPB303 Public Performance III 2 cr.**

The student, guided by a teacher, must give a public performance in which he/she is to demonstrate a high-standard of interpretation and a high-level degree of musical maturity.

**PSY101 General Psychology 3 cr.**

This course provides an overview of the basic concepts in Psychology. Topics may include human development, motivation, and personality, among others. Students should be able to understand psychology from historical and theoretical perspectives, to recognize various fields of psychology and different methods used.

**PSY201 Introduction to Psychology 3 cr.**

This introductory course is also enrolled in general education as a prerequisite for students who will pursue psychology training. This course will provide students with the basic concepts in psychology and will facilitate their access to knowledge during their academic curriculum. It includes the following objectives: understanding psychology from a historical and a theoretical perspective (Gestalt, phenomenological, experimental, scientific, psychoanalytic and cognitive, etc.); understanding the various fields of psychology (clinical, experimental, developmental, educational, social, etc.) and the different methods used (experimental, clinical, psychometric, projective, etc.); providing an appropriate approach to personality issues - basic needs, affective and emotional (feelings, emotions), intellectual (cognition, memory) and social (social influence).

**PSY214 Developmental Psychology 3 cr.**  
**Pre-requisites** PSY201

The course has two segments given in two sequential phases: Childhood and Adolescence 1st segment: childhood allows students to become familiar with basic concepts and notions of childhood developmental psychology (stages, phases and developmental factors); understand the major theoretical approaches (maturational, behavioral, psychoanalytical, cognitive constructivism and psychosocial approaches); identify the main characteristics belonging to each developmental stage on the biological, intellectual, affective, sexual, social and moral level; 2nd segment: adolescence allows students to understand the adolescent phase in the developmental process, note each function belonging to this stage, pinpoint the process of self-consolidation, the construction of the identity, achieving maturity as well as choices and decision-making processes.

**PSY219 Perceptual Motor Development 3 cr.**

This course is a study of the physical, motor growth and development of children. It emphasizes the selection of activities that influence the development of perceptual motor skills in young children, and describes perceptual motor theory and practical application in child care programs. Focus will be placed on motor development and movement performance, and how these relate to cognitive and affective development.

**PSY305 Clinical Psychoanalysis 1 3 cr.**  
**Pre-requisites** PSY201

This course is divided into two segments: the first segment enables students to recognize essential psychoanalytical notions based on Sigmund Freud's theories, particularly the discovery of the unconscious, psychic apparatus, psychosexual development and fundamentals of analytical therapy; the second segment allows students to identify leading figures in psychoanalysis, namely the post-Freudian authors (Anna Freud, Melanie Klein, etc.), as well as neo-Freudians (Alfred Adler, Carl G. Jung, etc.) The course aims to offer the students a means to adopt a psychoanalytical method of interpretation that can be applied in clinical psychology.

**PSY311 Theories and Models of Personality 3 cr.**  
**Pre-requisites** PSY201

The course consists of two complementary sections: the first section concerns a personality study through different standpoints of psychoanalysis and dynamic psychology, existential and humanistic psychology, psychometrics and factor analysis, behavioral psychology and through theories of learning including various affiliated methods and theories; the second section helps students in learning the application of various personality assessment methods.

**PSY313 Psychology of Religion 3 cr.**

This course enables students to acquire the basic concepts in psychology of religion and the thematic approach specific to the religious field. It includes a theoretical aspect to identify the different approaches that have been used to study the religious phenomena. It also develops some aspects of the conscious and unconscious psychic functioning on individual and collective levels and highlights psychological aspects of normal and pathological religious behavior.

The second aspect is methodological, it involves the application of models and psychological instruments to interpret conducts or religious phenomena through studying and analyzing practical cases encountered in this area.

**PSY315 Psychology and Health 3 cr.**  
**Pre-requisites** PSY201

This course develops the following: recognition of the theoretical and empirical foundations in psychology of health, their application on the dimensions and the psychological behavior of health and disease (styles and habits of life) in the predisposition, development and maintenance of physical illness, in health and the management of certain diseases.

The identification of themes related to the psychology of health (pain, stress, cancer, obesity, addictions, vulnerability, and others).

**PSY318 Personality and Self-Development 3 cr.**  
**Pre-requisites** PSY201

The aim of this course is to explain the processes of personality construction through a progressive self-discovery. This is a multi-axial approach to the different dimensions of personality; its evolution and the interaction with the environment, will be addressed. This will provide a general overview of the concept of personality and its dynamic aspect from birth until old age. Also covered will be affective and social aspects in the relationship of the self to the world and, finally, "normal" vs. "pathological" personality development.

**PSY325 Introduction to Psychosomatics 3 cr.**  
**Pre-requisites** PSY311

The course focuses on the field of psychosomatics and introduces different perspectives and schools examining somatic manifestations that are strongly associated with the psychological development of the individual. The course also studies symptomatology of psychosomatic disorders from early childhood to adulthood, resulting from psychological development. It also explains the different aspects of the therapeutic procedure addressing psychosomatic symptoms.

**PSY330 Social Psychology 3 cr.**  
**Pre-requisites** PSY201 Or SOC201

Firstly, this course explains the basic concepts in the various fields of social psychology, namely values, norms, opinions, attitudes and roles, social interactions, communication and information. The course then develops the group notion and covers its theoretical perspectives (cohesion, interaction process, conflicts and resistances, etc.) and group animation (methods, techniques and applications). The practice of social interactions is inherent to this teaching (role play, information clips, case simulations, etc.).

**PSY334 Psychology of Education 3 cr.**

The course objective is to introduce and train the student in educational psychology and the different underlying theoretical principles of the discipline. The physiology of organic and psychological bases of cognitive functioning will be addressed (e.g. reading, language, memory, attention, etc.) as well as the cognitive educability and the problem of motivation, in addition to the pathological elements that can impede proper psychic functioning.

**PSY335 Developmental Clinical Psychology 3 cr.**  
**Pre-requisites** PSY214

This course identifies the characteristics of the adult stage, crises and problems encountered during the different ages of the adult, maturity and crises (mid-life crisis, generational conflict, identity and professional problems of men and women, loss and mourning, etc.). In the second part, this course targets and analyzes the influence of environmental and cultural factors, attitudes, values and social representations.

**PSY334 Psychology of Education 3 cr.**

The course objective is to introduce and train students in educational psychology and the different theoretical principles underlying such a discipline. The physiology of organic and psychological bases of cognitive functioning will be addressed (e.g. reading, language, memory, attention, etc.) as well as cognitive educability and the problem of motivation; in addition to the pathological elements that can impede proper psychic functioning.

**PSY337 Child and Adolescent Psychopathology 3 cr.**

**Pre-requisites** PSY214

This course defines the theoretical bases of child and adolescent psychopathology. Themes are selected with respect of the priority of hereditary, congenital or acquired pathologies and progressing to other psychiatric disorders.

A recurrent therapeutic overview follows the definition and identification of various psychological disorders that enables the students to reinforce any understanding of the psychopathology.

**PSY366 Personal and Professional Development in Occupational Psychology 3 cr.**

**Pre-requisites** PSY311

The course objectives are: personal development (psychological orientation and counseling); and professional development (establishing the necessary link between personality and professionalism, as the set of job-related skills needed to practice a trade). The course develops the following themes: key knowledge in Counseling Psychology; the main models and types of intervention in counseling; guidance in counseling and occupational mobility; knowledge of the different types of intervention (recruitment and guidance interview, review interview, counseling interview); and knowledge of various ethical and deontological aspects of human labor. At the end of the course, students will know how to conduct interviews in guidance, counseling, and support for personal and professional development.

**PSY370 Counseling and Ethics 3 cr.**

**Pre-requisites** SOC325

This course consists of two parts as follows: Part 1 (2 credits) raises awareness of the models and methods of guidance counseling to education, training and occupations; develops the concept of guidance and counseling as a helping relationship that supports young people in their educational and eventually professional paths, and adults in their working lives; allows the young psychologist in training to master the theories and the frameworks of the orientation (concept of professional project, representation of professional stereotypes, theories and strategies of the aid relation in counseling); Part 2 (1 credit) is reserved for the ethics of the psychologist in the workplace (code of ethics of the internationally recognized psychologist).

**PSY378 Practice of Evaluation in Industrial Psychology 3 cr.**

**Pre-requisites** PSY366

This course aims to teach students how to conduct an objective and scientific evaluation using instruments, trials and tests pertaining to the quality of work, workers' skills and organization system evaluation, in terms of productivity/performance. The course is based on a methodological approach covering: the cognitive analysis of daily activities and work situations; project management and its conformity with the aims and means; personality assessment; assessment of skills; assessment of work conditions (healthwise - prevention of occupational risks and safety); and assessment of professional and interpersonal relations. At the end of the course, students will know how to provide a dynamic interpretation of the results obtained using evaluation methods and are capable of justifying an opinion formulated and based on these results.

**PSY400 Group-Class Psychology and Educational Relationship 3 cr.**

This course is designed specifically for teachers who manage a class within a class. The course consists of two interrelated components: the dynamics of the class group located in the class, in the school context by studying its internal psychological functioning and laws governing it; the problem of the atmosphere of the class and the interactions that occur there. The psychology of the educational relationship considers first the psychological mechanisms at the base of the relationship, then the foundations of the educational relationship, and clarifies the criteria for a healthy educational relationship within the triad of parents, students and teachers.

**PSY414 Initiation to Work Psychology 3 cr.**

This course provides students with the fundamentals of the psychology of work. The course sets itself objectives of situating the psychology of work compared to its history, its evolution, distinguishing working conditions and studying their effects on workers (stress, satisfaction, motivation, etc.), and approaching the various areas of intervention of the psychologist's work (personnel management, training, psychological assessment, etc.).

**PSY415 Ergonomics Analysis 3 cr.**

This course intends to define ergonomics (adapting work to the operator) within the framework of labor sciences and to present its approach to human beings at work, with the practical objective of improving the work situation, particularly – albeit not exclusively – the relationship between men and machine. The course presents a history of ergonomics, its trends (physical ergonomics, cognitive ergonomics, macro-ergonomics, anthro-technology, and design) and its methods (observation of activity, analysis of communications at work, simulation, etc.). It enables students to get to know the fundamental concepts of ergonomics: real work–prescribed work, task and activity, modus operandi, regulation, responsibility and constraint and labor analysis. It also covers labor-health and labor-time relations. It will be completed with a description of objectives and forms of action in ergonomics (correction, conception, organization, formation, etc.), and teaching will build on examples of ergonomic action.

**PSY422 Cognitive Psychology 3 cr.**

**Pre-requisites** PSY311

The course demonstrates how intelligence is implemented in cognitive activities such as attention, perception, memory, problem-solving, decision-making and reasoning. For each of these core activities, the information processing theories will be determined, as well the methods and techniques used by psychologists to understand, analyze and assess cognitive functioning.

**PSY425 Creative and Cognitive Experiences For Young Children 3 cr.**

This course prepares individuals to work with young children in creative age-appropriate activities and investigates affective classroom experiences through open-ended activities. It emphasizes theoretical and practical aspects of cognitive development for children ages 3 through 6 with a focus on planning integrated experiences and content in science, mathematics, and social sciences. It develops students' understandings of young children's creative expression through art, music, movement, play and drama, and emphasizes how to plan, implement, and evaluate appropriate learning experiences as well as selection of appropriate instructional materials.

**PSY433 Fundamental Psychobiology 3 cr.**

**Pre-requisites** PSY311

This course studies the physiological study of the human being, especially the biological human constitution and its influence on its psychological characteristics, the emotions, intellect, imagination, belief, etc., taking into account the important contribution of neurosciences. The course enables students to understand, from biology and neurobiology, the psyche and human behavior.

**PSY437 Adult Psychopathology 3 cr.**

**Pre-requisites** PSY335

This course identifies the psychiatric disorders of the adult; specifically their symptoms, etiologies, and the different modalities of management and treatment. It enables students to differentiate psychotic disorders (schizophrenia, delusional disorders), mood disorders (depression and bipolar disorders), anxiety and conversion disorders (OCD, phobia, panic disorder, GAD, conversion), alcohol and substance use disorders, as well as personality disorders. Another student objective for this course is to identify disorders, make differential diagnoses, and be introduced to the treatments used in psychiatry, in order to have a comprehensive understanding of adult psychopathology.

**PSY439 Work Psychopathology 3 cr.**

**Pre-requisites** PSY366

This course identifies the psychological problems caused by work: adjustment and adaptation to various working conditions, states of fatigue and neuroses of work, the concept of 'burn out', the problems caused by automation and the use of computers, the effects of unemployment on mental health, and the issue of the employment of sick and mentally disabled people. The course develops the topics of anxiety and stress at work, the causes of work stoppages, addiction to work, workaholism, etc.

**PSY445 Clinical Psychoanalysis 2 3 cr.**

**Pre-requisites** PSY305

The aim of this course is to develop further theories regarding personality structures and psychological disorders based on Freudian and post-Freudian concepts within contemporary psychoanalysis. More specifically, students will comprehend the relationship between theory and practice in the clinical framework, through a variety of theoretical constructs amongst current authors of the Psychoanalytical Society of Paris (Jean Bergeret, Pierre Marty, Françoise Dolto and others) and the International Lacanian Association (Jacques Lacan). Students will also be introduced to recent research from the European and American psychoanalytical schools, thus benefiting from the scientific activities and the recent publications of these schools.

**PSY455 Psychological Management of Human Resources 3 cr.**

**Pre-requisites** PSY414

This course is divided into two parts: - the first part includes the objectives, components and knowledge bases of the HR function within organizations; the second part addresses the psychological management of problematic issues pertaining to management, labor relations and their consequences. This course develops humanistic approaches (motivation- satisfaction-implication), interactionist approaches (illustrating the actors and their strategic approach) and symbolist approaches (illustration of corporate culture).

**PSY467 Group Management Functioning and Dynamics 3 cr.**

**Pre-requisites** PSY311 and PSY330

The course focuses on theoretical models of the functioning and management of groups, as well as on notions of inter-group communication and its application on different levels: group, family, individual and organizational. Students will be required to participate in a group dynamics session and write a summary report of their personal experience within the group.

**PSY469 Communication Techniques and Clinical Examination 3 cr.**

**Pre-requisites** PSY337

This course is twofold: validate the clinical approach, maintenance procedures and clinical examination and the method of testing at the level of the child and adolescent; use and review data analysis of different tests - intelligence test (verbal and non-verbal), personality tests (questionnaire, scales, etc.), projective tests (CAT, Black Legs, scéno -test, drawings, etc.), in order to establish a diagnosis of mental and psychic functioning and prognosis of evolution, adapted to children and adolescents.

**PSY470 Adult Psychological Exam 3 cr.**

**Pre-requisites** PSY335

This course enables the recognition and use of the psychometric tests adapted to adults: intelligence test, personality, recruitment or referral, psychopathology rating scale, etc. It also allows analysis, data processing and interpretation, in order to establish a diagnosis of mental functioning and evaluation prognosis. The students will learn to write a report (or psychological assessment) and to communicate the results as appropriate.

**PSY475 Internship of Clinical Psychology 3 cr.**

This internship aims to guide students who, at the end of their third academic year, choose to access the Master of Clinical Psychology. Students, in agreement with the Head of Department, undergo an internship in an institution that supports the various cases and offers students the opportunity to observe them, to become familiar with the clinical territory rich in problems whose solutions fall within the competence of the clinical psychologist. The duration of the internship lasts for one semester for four days a week and five hours a day, from 8:00 am to 13h. 20 hours per week; in other words, an hourly volume of 300 hours per semester.

**PSY479 Internship of Industrial Psychology 6 cr.**

The internship enables the students to learn about the functioning of organizations: public or private companies, administrations, associations, etc., and their place in economic and social life. The course is an introduction to the life of work, an openness to the system of communication and information within a company, a prerequisite for putting into practice the theoretical acquisition concerning human resources management and the management of contradictions in a particular undertaking. The phases of the course are: a) a stage of observation during which the trainee is limited to the observation of the progress of the work in contact with the leaders and, if possible, with staff, b) a stage of intervention, under the supervision of the organizational psychologist hired by the company, with cases, which constitute a problem within the institution. The response phase is controlled by the psychologist at work or under the control of the master psychologist of the course teacher. At the end of the course the students prepare a detailed report in which they present the company, describe the workings, the hierarchical distribution, the quality of work, the means put at the disposal of the worker to evolve or fall into mental impairment, working hours and respect for labor rights, possibilities of malfunctions, etc.

**PSY480 Personality Study with Projective Techniques 3 cr.**

**Pre-requisites** PSY311

The course is divided into two distinct but complementary parts: Psychodiagnostic Rorschach and the Thematic Apperception Test. Psychodiagnostic Rorschach aims to examine the theoretical models that govern the diagnostic range, prognosis and treatment of the Rorschach test, wherein all ages and issues are involved. Students will learn the basics of operating the Rorschach and acquire technical interpretation of the different indices of Rorschach. The Thematic Apperception Test (TAT) aims to understand the foundations of psychoanalytic interpretation of TAT by the method of Vica Shentoub and its successors; and the counting chart developed by the school, without excluding other interpretations. After a theoretical overview of

the two projective tests, an application will be based on a case study of clinical protocols of children, adolescents and adults on a normality and pathology level.

**PSY510 Occupational health psychology 3 cr.**

The course allows for better understanding of the factors that promote employees' health and well-being in the workplace. The main theories and empirical knowledge on the following topics are addressed: psychosocial risks (PSR) and their identification (quantitative and qualitative assessment), quality of life at work, psychological well-being at work, psychological distress at work, epidemiological approaches to stress at work (stress auditing in the workplace), the labor clinic (work psychodynamics), harassment, violence and suicide at work.

In addition, the position of the work psychologist is depicted through a two-track approach: strategies for prevention and recovery from PSR and health problems and risky behaviors at work.

**PSY515 Social psychology applied to work 3 cr.**

The course outlines the main themes characterizing the structure and functioning of the actors within the organizations. It addresses the structural aspects of organizations and organizational culture while focusing on three main categories of organizational processes: leadership, power and influence and intergroup relations. It presents in particular the conflict mechanisms at work (interpersonal, between statuses, between production units) and its effects on relational dynamics within professional organizations.

The course presents as well the different models of organizational communication and their effects on the interaction process and sets out the specific communication forms and contexts (like mass communication, rumors, communication with employees).

It also deals with aspects related to development and change (learning and organizational memory, organizational development) and examines the recent challenges that organizations have to face (cultural diversity, new technologies).

**PSY531 Clinical Cognitive Neuropsychology 3 cr.**

This course aims to train students in the application of the major concepts and methods of cognitive psychology in the study of the dysfunction of consecutive cognition in brain damage. It aims to describe and decipher the cognitive and emotional disturbances related to brain and mental dysfunctions, which underlie them: dyslexia, spatial representations, selective attention, spatial hemineglect of the knowledge of the object (agnosia, etc.). The analysis of these alterations also allows for testing theories of normal mental functioning.

**PSY532 Psychotherapies 3 cr.**

The course focuses on the different psychological therapeutic approaches, in terms of both the theoretical framework of their principles and application techniques: psychoanalysis, the psychotherapy of analytical inspiration, psychotherapy of humanistic inspiration (personalistic existential), the methods of relaxation, familial, sexual, institutional, behavioral and cognitive therapies, hypnosis, etc.

**PSY536 Learning Disabilities: Dyslexia, Dysorthography, Dyscalculia 3 cr.**

This course comprises:

1. An analysis of the learning processes in a classroom situation
2. A study of neuropsychological or cognitive constraints underlying the learning process
3. An analysis of the main acquisition models of reading, mathematics, and cross-curricular competencies, such as problem resolution coupled with the emotional and social development of the child as well as the adolescent.
4. The main disorders: (dyslexia, graphic disorders, the dysorthographia, dyscalculia), along with their diagnosis, their causes and their signs.
5. The impact on academic performance and adjustment problems which these disorders pose. The psycho-pedagogical measures to be undertaken

**PSY537 Behavioral Disorders at School 3 cr.**

This course sheds light on the different behavioral disorders, such as attention, hyperactivity, oppositional disorders, violence, shyness... This course analyzes the points mentioned hereinafter:

1. The principles and framework of intervention with students;
2. The cognitive and affirmative behavioral methods of intervention ;
3. The processes of assistance and collaboration with parents.

**PSY545 Practicum Training in Psychology 3 cr.**

The internship's framework aims to further develop notions in psychology in a practicum scope. The student in agreement with the Head of Department, is responsible of seeking an internship in an association, dispensary, hospital, school, enterprise, etc. The trainee will undergo supervised training in assessment, evaluation, and preparing an intervention plan.

The duration of the internship is 300 hours that can be distributed as follows:

- Fulltime internship in an association, dispensary, etc.
- Participating in workshops/colloquiums and writing reports.
- Participating in the implementation of psychosocial projects.

**PSY548 Personality and Health 3 cr.**

This course addresses the study of psychological factors related to the personality, namely the cognitive, emotional, behavioral and biological aspects which exert influence in the predisposition, development and management of certain diseases. The personality as a factor of vulnerability

**PSY550 Interventions and professional support in the organization 3 cr.**

The course presents the different methods of intervention and support in occupational psychology and their theoretical bases.

At the organizational level, the course addresses the main intervention mechanisms of psychologists in the workplace (predictive management of jobs and skills, orientation, skills assessment, etc.) and analyzes the constraints systems that structure them as well as the social, organizational and individual demands related to them. It also presents the organizational strategies for primary, secondary and tertiary intervention that promote the adaptation of employees to work (tutoring, mentoring, management practices, Work Psychodynamics and Appreciative Inquiry).

In addition, the course outlines the psychological bases of professional support: cognitive-behavioral techniques at work, professional coaching (forms and stages of a professional coaching process), and support based on psychoanalytic approach.

**PSY552 Taxonomy and Psychopathology 3 cr.**

The objective of this seminar is to reflect on the history of classifications in psychopathology. The seminar provides insight into how nosography has transformed and enriched for over a century. Similarly, it focuses on the first descriptions of mental illnesses, on the evolution of ideas in psychopathology and the various etiologies found across the time. It takes its beginning from the descriptions of Bleuler, Charcot, Serious Capgras, etc., passing through the extremely rich writings of Henri Ey, until reaching the DSM and ICD.

**PSY564 Evaluation Methods And Techniques In Health Psychology 3 cr.**

This course addresses:

1. The training to evaluation, to diagnosis ;

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                |              |

| This course examines clinical psychology: exploring its definition, its history, its method, its boundaries and the many application fields by showing how the models (psychodynamic, cognitive-behavioral, neuropsychological) influence clinical practice. Such teaching will be done through a variety of clinical cases and illustrations and is spanned by a critical and constructivist perspective.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                |              |

| This course focuses on the different conceptual frameworks and methods of study in the psychology of family. It explores the different approaches - psychoanalytic (relationship and attachment); and systemic (morphology of the family relationship, the genogram, transgenerational). Then the pathology of family ties: pathology of intrafamilial communication. The course then looks at the various therapies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                |              |

| This training is a seminar aimed at enabling the students to conduct a research project in the field of psychology (clinical, health, school and work). This seminar is linked to all courses and, in a special way, to the research methodology in Human Sciences. The students are assisted during the course in realizing the first steps of the research project. The main objective of this seminar is to build a research project which will be finalized in the Dissertation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                |              |
| After attending the seminar, the students are required to submit a final written project (20 typescript pages). Epistemology is a part of the course, covering a study of concepts and methods of the various trends of modern epistemology initiated in the early "epistemological breaks" that separate the pre-scientific period from the classical rational science period and highlight their involvement in the renovation of the statuses of science, epistemology and history of science.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                |              |

| The course begins by looking at the concept of stress, specifically covering: evolution of conceptions on psychosocial determinants of health and disease, stress issues, the concept of stress, and definitions; the epidemiological model (prospective research, retrospective, quasi-prospective, and risk factors); the biological model (Pavlov, Cannon, Laborit, Selye); the psychoanalytic model (concept of trauma, conversion mechanism, the concept of protective shield, the concept of self-skin, post-stroke mechanism); the psychosomatic model (Groddeck, Alexander, critic of the typology of Dunbar; School of Marty, concept of operational thinking; contemporary American school, concept of alexithymia); Stress Assessment Methods (scales of "life events", of daily hassles, of perceived stress); transactional stress approach (theories of Lazarus and Folkman, primary assessment, secondary assessment, identification and assessment methods of different concepts - perceived stress, perceived control, social support, coping strategies); links between personality traits (locus of control, expectation, sense of coherence, self-efficacy, etc.); and coping and stress adjustment. The second part of the course examines Post Traumatic Stress Disorder (PTSD), covering topics on: definitions of trauma; the different approaches to trauma - (psychoanalytic approach for archaic trauma, cognitive approach (conditioning model of fear), neuropsychological approach (theory of Damasio); Trauma and Post Traumatic Stress Disorder; the various sources of PTSD; PTSD diagnostic criteria; psychosocial determinants of PTSD; protective factors of PTSD; PTSD Evaluation Methods; stress and war trauma; takeovers and prevention of PTSD; debriefing, hypnosis, EMDR, cognitive and behavioral therapies; Cells of Medico-Psychological Emergency (WAC); and specificities of takeovers in children and adolescents. |                                                                                                                                                                                                                                                                                                                                                                                                                |              |

| This course aims to support the occupational psychologist's work in the face of the following professional issues: endowment, performance, discipline and conflicts, work relations, training, remuneration and mobilization. Through role playing and case studies, practical worksheets (performance evaluation form, formal evaluation interview form, performance action plan form, organizational mediation form, technical sheet for ongoing training plan, etc.) shall be made available to the psychologist to help him/her solve the real situations in his/her future work environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                |              |

| This course aims to enable students to develop their understanding of the links between orientation principles and practices. It provides an exhaustive analysis of psychological and psychosocial determinants of lifelong orientation. It is based on several models and theories that can be used in adult orientation practices, such as the dispositional and interactionist approach, cognitive social theory, Erikson's models of identity formation, attachment theory, adaptation to transitions, the role of motivation and emotions in orientation... In addition, the course presents the different (individual and group) intervention models in orientation while focusing on intervention skills grouped under five main functions: communication; emotional support; meta-communication; structuring and production.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                |              |

| The setting of the research being Psyche the Laboratory of the Psychology Department, students are required to investigate behavioral patterns, cognitive functions, emotional development, communication, etc. It's within this framework that the laboratory enables students to define and choose not only the theme, but also the research strategy, and the preferred type of methodology (psychoanalytic, systemic, socio-clinical, behavioral, etc.). The ultimate goal is that students devise a research paper in the field of psychology                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                |              |

| This seminar invites students to reflect on processes involved in interactive situations they will experience, especially during trainings in a professional environment. These future professionals will be sensitized to the practical aspects of professional activities by developing their capacities of understanding and adjustment to others and by discovering the importance of an investigatory work based on their discourses about situations encountered in practice. The aim of this seminar being only formative, the students will present clinical cases, inter-individual situations, theoretical references, etc., which will lead to a group elaboration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                |              |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                             |              |

| This course aims to introduce students, and eventually practicing psychologists, to continuous ethical concerns, which must be part of the practice of each psychologist. This course analyzes ethical problems pertaining to the practice of the psychologist (benevolent neutrality, professional secrecy, professional integration, professional identity, etc.).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                             |              |

| Through this course, students will be able to follow a research seminar involving international speakers and specialists in psychology (clinical, health, school and work). They may study concrete examples falling within the scope of current research in psychology focusing on the methodology (research systems designs, data analysis, etc.). Presentations will be organized to develop a given theme, each representing a specific disciplinary or methodological approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                             |              |

| The objective of this course is to address a set of theoretical and empirical works on the development of numerical cognition. The following points will be considered:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                             |              |

| This course provides a general introduction to dependencies, the criteria of addiction, and the epidemiology of dependencies. It also looks at different drugs, addictions, the psychopathology of drug addicts, the takeover of a cure and post cure, and possible therapies in addictions. The alcoholic illness, psychopathology of dependent alcoholics, consumers at risk and problems, the care of alcohol addiction, eating disorders (bulimia, anorexia, etc.) will also be covered, as well as the addiction to medication, tranquilizers and hypnotics, and mental illnesses that lead to abuse of medicines.                                                                                                                                                                                                                                                                                                                |                                                             |              |
| <b>PSY677</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Neurosciences, Cognition &amp; Learning difficulties</b> | <b>3 cr.</b> |
| The course focuses on the brain's constitution and its various functions, on new research related to the human brain and the development of the child at all levels (cognitive, affective, psychomotor, etc.). The course provides an understanding of brain dysfunction and its effects in some children with special educational needs: memory impairment, attention disorder, behavior disorder (ADHD), dyslexia, dysgraphia, dyscalculia, etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                             |              |
| <b>PSY682</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Psychology of Family Ties</b>                            | <b>3 cr.</b> |
| The family will be addressed as institutional entity and place of transmission, psychic inheritance and identity crucible for individuals in their knowledge, beliefs, and hopes. The Lebanese fieldwork will focus on forms and structure of the family in the Lebanon link: study of the nature of the links between individuals to a family (children, parents, grandparents) and the representation they make will be comprehended as moral values, beliefs, changes in family models and identity changes arising therefrom, and the psychopathology of the inter and transgenerational situation.                                                                                                                                                                                                                                                                                                                                |                                                             |              |

| The project is a work of professional in continuing education (PSY, EDU, SOC, TIS). The objective of the project is to make the Master student a reflective practitioner capable of identifying a problem and answering it by referring to the literature corresponding to the problem identified, followed by setting up a system that contributes to a solution or a recommendation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                             |              |
| The project develops in a research work of 45 to 50 pages typed as body of text which includes the personal, technical and scientific criteria that motivated the student to undertake the project; the literature corresponding to the research project, field work and a solution or remediation perspective, or a new reasoning on a specific issue, etc., and a conclusion. (Bibliography, appendices, are not part of the body of the text.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                             |              |
| <b>Instrument/Vocal</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                             | <b>6 cr.</b> |
| The students will use suitable playing or singing techniques with any instrument or singing program of their choice. They are asked to achieve levels I, II, and III.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                             |              |

| An introduction to the basic principles and methods of conserving and preserving the wide range of materials found in libraries, archives, and special and heritage collections. The purpose of this course is to introduce students to principle carriers of information, procedures for managing information through its life cycle, and methods for protecting that information from loss, damage, deterioration, destruction, and obsolescence for as long as it has value. The course will explore a wide variety of media in which information is commonly stored, and will introduce current methods and best practices for extending their useful life.                                                                                                                                                                                                                                                                        |                                                             |              |

| This course studies the origins, development, and evolution of libraries, archives and museums, from antiquity to the twenty-first century; as a reflection of literacy, recognition of archival responsibility, humanistic achievement, scientific information needs, and service to society. It also examines the historical development of the information society through a number of important conceptual lenses. The course will also introduce the theory, principles, standards, and methods of information organization across a variety of information environments. Topics include principles of information representation, tools for information access, metadata, and controlled vocabulary.                                                                                                                                                                                                                             |                                                             |              |

| This course provides an overview of the interaction between the definitions attributed to libraries, archive centers and museums throughout different eras; the origin of documentary and museum-related practices inherited from the past; and the evolution of buildings' architecture. The book will be studied under its three aspects of production, diffusion and consumption, while emphasizing on its peculiarity in the Orient.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                             |              |
| <b>SEN510</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Psychological Approaches to Handicap</b>                 | <b>3 cr.</b> |
| The course has two components:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                             |              |
| 1-A psychosocial approach to disability and social representations of disability: this part of the course focuses on the experience of a handicap that the psychology interprets and envisions the consequences over the individual, his life, his personality as well as on the different ways to respond. The social representations of disability determine the relations of social performers with the disabled person. The flap develops the main types of social representations: a) the representations that underlie and are underpinned by concepts that classify disability, b) the social representations, sources of exclusion, rejection, refusal of differences, c) the performances that bring to disability technical, human, physical and institutional aids, d) the representations that reduce the suffering affects which falls on the handicapped, e) the representations that integrate disability to the child. |                                                             |              |
| 2-A psycho-cognitive approach to disability: self-regulation and dysregulation in the mentally deficient person: diverse approaches of regulatory processes falling within psychology and developmental psychopathology, psychology of learning and cognitive psychology are elaborated in this course. Self-regulation is seen as a skill and as a result of learning. The impaired person, who cannot seem to manage, entails the concept of hetero-regulation, i.e. a control process carried out by another person.                                                                                                                                                                                                                                                                                                                                                                                                                |                                                             |              |
| <b>SEN605</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Practice: Supporting People with SEN</b>                 | <b>3 cr.</b> |
| The course is designed as a professional practice of coaching people with SEN. It has two components:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                             |              |

1-Citizenship of the person with special educational needs expressed in: a) knowledge promoting the skills of mentally deficient person; b) standardization that can induce behaviors which bring the person with disabilities from the "norm" and adapt the person to the environment; c) social participation or inclusion which is a Twofold Dynamics: from the side of the person with disability and that of the environment in relation to the person.

2- Body and Communication, Theatre, Music, Plastic Arts; (Workshop of your choice)

The student in training can choose a component and work on it. The work is designed in the form of artistic workshop that allows the person with disabilities to express and communicate. It is a form of support to learn to accompany people with special educational needs in their desire to express themselves and flourish since their mental disabilities often deny other forms of expression such as dialectics, the writing or sometimes just the word.

The objective of the workshop is to help the trainee to: a) make Art a way that helps the person with special educational needs to restore self-image, b) become familiar with the different adapted techniques that empower the individual with special educational needs to master his behavior, to refine his temperament, to reduce anxiety, demote hyperactivity and identify the possibility of deviant behavior.

**SEN610 Psychomotor Activities for People with SEN 3 cr.**

The course focuses on the relationship between motor skills, mind, and emotions and promotes the overall approach of the child. It deals with the concepts and principles of theoretical and practical bases (games, exercises, techniques, postures), enabling them to: a) develop a good body scheme; good laterality; a perception of time and space, b) discriminate psychomotor disorders and their causes; c) prepare the prerequisites of all learning; and d) knowledge.

**SEN615 Learning Processes Applied to People with SEN 3 cr.**

The course focuses on the appropriate educational process for people with special educational needs: a) the knowledge to teach, how to understand and apprehend them, b) didactic aspects and situations, c) the organization of optimal conditions teaching / learning to enable students to develop the knowledge and skills and access to culture. The steps to be implemented are: a) a reflection that examines the nature and meaning of teaching / learning and which is responsible for showing the relationship between the student and the knowledge and the relationship between the specialized teacher and didactics; b) an analysis of transpositive process is conducted to highlight the reference to knowledge, knowledge to be taught and the knowledge taught, c) development of the type of mediation to offer to the student in his acquisition of knowledge.

**SDG303 Solfeggio/Dictation III 2 cr.**

a- Solfeggio parlato : - Pozzoli: appendice al primo corso from n°1 till n°31.

b- Solfeggio cantato: - Pozzoli: appendiceal prima corso from no1 till no27.

c- Dictation:-Noel Gallon from no 41 till no60. - melodic intervals: all intervals, and major and minor chords.

**SDG201 Solfeggio/Dictation I 1 cr.**

1<sup>st</sup> course

a- Solfeggio parlato : Pozzoli: Primo corso du n° 1 au n° 31

b- Solfeggio cantato: Pozzoli: Primo corso du n° 1 au n° 31

c- Dictation: Noël Gallon du n° 1 au n° 20 – melodic intervals: 5<sup>th</sup>, 4<sup>th</sup>, octave, 3<sup>rd</sup> maj and min, 2<sup>nd</sup> maj and min.

**SDG202 Solfeggio/Dictation II 1 cr.**

**Pre-requisites** SDG201

2<sup>nd</sup> course

a- Solfeggio parlato: Pozzoli: Primo corso du n° 32 au n° 60

b- Solfeggio cantato: Pozzoli: Primo corso du n° 32 au n° 60

c- Dictation: Noël Gallon du n° 21 au n° 40 - melodic intervals: Triton, 6<sup>th</sup> maj and min, 7<sup>th</sup> maj and min.

**SDG303 Solfeggio/Dictation III 1 cr.**

**Pre-requisites** SDG202

3<sup>rd</sup> course

a- Solfeggio parlato: Pozzoli: appendice al primo corso du n° 1 au n° 31

b- Solfeggio cantato: Pozzoli: appendiceal primo corso du n° 1 au n° 27

c- Dictation:-Noël Gallon du n° 41 au n° 60 – melodic intervals: all intervals, and major and minor chords.

**SDO304 Solfeggio/Dictation IV 3 cr.**

**Pre-requisites** MPR223 Or MPR431 Or MUP357 Or SDO303

4<sup>th</sup> course

a- Solfeggio parlato : - Pozzoli: secondo corso du n°1 au n°36.

b- Solfeggio cantato: - Pozzoli: secondo corso du n°1 au n°28.

c- Dictation : - Noël Gallon du n°61 au n°80. - Noël Gallon (2 voix) du n°1 au n°20.

**SDO405 Solfeggio/Dictation V 3 cr.**

**Pre-requisites** MPR224 or MPR541 or MUP358 or SDO304

a- Solfeggio parlato: Pozzoli: Secondo corso du n° 37 au n° 68

b- Solfeggio cantato: Pozzoli: Terzo corso du n° 1 au n° 25

c- Dictation:

- Noël Gallon du n° 81 au n° 100

- Noël Gallon (2 voix) du n° 21 au n° 40

- Accords à trois sons: 5<sup>e</sup> ag et 5<sup>e</sup> dim (à l'état fondamental)

- Chords of 3 sounds: 5<sup>th</sup> aug and dim (at root position)

**SDO406 Solfeggio/Dictation VI 3 cr.**

**Pre-requisites** MPR225 Or MPR457 Or SDO405

**Spoken Solfege:** Il Nouvo Pozzoli Vol. 2: N. 59-90 (+ Ornaments 5 exercises)

A: N. 59-72 (Alternation of 7 keys, irregular meters, jazz style)

B: N. 73-84 (ditto most difficult and irregular and proportional time groups)

C: N. 85-98 (Idem more difficult)

Pages 70-71-72, N. 1, 2, 3, 4, 5.

**Singing Solfege:** Pozzoli (former) Appendix al Terzo Corso: N. 1 – 40

A: N. 1-13 (various 2nd, 3ce, 4te)

B: N. 14-25 (various 5te, 6te, 7th, 9th, chromaticism)

C: N. 26-40 (ornaments, enharmonic, Oriental and defective scales, modes)

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |              |

|                       | The "accompanied solfeggio" course consists of singing solfeggio exercises, according to its level, accompanied by a pianist; this accompaniment is usually written by the author of the music theory manual for all levels. In this course students put their theoretical solfeggio into living practice and adapt it for a joint execution; to an aesthetic interpretation (phrasing, nuances and agogic respect) and a solid mastery of the intonation.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |              |

|                       | This course provides a basic knowledge of general sociology: a) it presents an overview of the context of event-emergence of sociology on the basis of the main founders and focuses on the methodological perspectives and applied sociological methods and techniques; b) it focuses on the key principles of social themes, which description and definition have fueled the many debates that are changing this discipline within the vast corpus of scientific knowledge. This course provides the students with general sociology elements, sensitizes their "sociological perspective" and develops critical reflection on various social issues.                                                                                                                                                                                                                                                       |              |

|                       | This course focuses on the complex question of humans and the place of anthropology within the science of humanity. It addresses the key conceptual notions of anthropological reflection (society, myth, ritual, tradition, symbol, etc.). Similarly, the course presents the components of the research framework, both practical and theoretical, of anthropological study. It develops the basic foundation of the entire social system and proposes the discovery of trends of current anthropological topicality and openness to contemporary anthropology. Upon completion of this course students will be able to understand the concepts of anthropology and its fundamental concern that allows it to guard against social, cultural, sexist and racial prejudice.                                                                                                                                   |              |

|                       | Most of the analysis within human and social sciences and decision-making is founded on statistical data. Students work individually on data collected either in their research or in their professional lives. This course provides students with the tools and knowledge required to present, in tables and graphs, the data they have to handle, to analyze the characteristics of a statistical distribution to a character and to study the correlations between two variables. Particular attention is devoted to the choice of statistical methods and interpretation of results.                                                                                                                                                                                                                                                                                                                       |              |

|                       | This course is based on an analysis of the basic notions and concepts necessary for any approach or field of study and sociological research. It notes, therefore, differences between concepts "encompassed" and concepts of "inclusivity", in order to cover external phenomena/internal to corporations. It addresses notions and concepts such as: culture, civilization, collective belief, modernity, habitus, norm, compliance, status and role, value, socialization, classes and social elite, etc. It develops in students a critical perspective in its comprehension of all social reality. After the course, the students will have gained an inductive construction of the concepts discussed and a mode of sociological thinking.                                                                                                                                                               |              |

|                       | This course focuses on the key concepts and theoretical foundations of the sociology of education. It includes a historical overview of the functioning of the school. It also explains the report of school social institutions and socio-economic and cultural parameters likely to influence the curriculum of students as well as their expectations and aspirations; reflecting "educational inequalities" and evaluating the role of policies and compensatory strategies. This course aims to develop the critical thinking of students about inequalities within the school system and enables them to undertake the documented analysis of 'social stratification' as 'school differentiator'.                                                                                                                                                                                                        |              |

|                       | This course introduces students to the concepts of statistical inference essential to research in the humanities and social sciences. Students are often required to collect information on samples of individuals and not on the entire population. They learn to draw conclusions about the population they are interested in, from the data collected on samples with prudence and necessary rigor. For this purpose, this course introduces the students to the laws of probability, the estimation of population parameters by an interval of confidence and benchmark testing of two, as well as many mediums, by analysis of variance.                                                                                                                                                                                                                                                                  |              |
| <b>SOC325</b>         | <b>Psycho-Sociology of Communication</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>3 cr.</b> |
| <b>Pre-requisites</b> | PSY201                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |              |
|                       | This course is divided into two parts. The first part includes a base of theoretical and conceptual skills of communication. This is how the communication will be detailed as a psycho-sociological object with its theories and ideologies, analyses of mass communication, psycho-sociological perspective, critique of contemporary currents analysis of communication and information, psycho-sociological reading of communication and professions. Analytical progress will be made on the study of public discourse in the media, and the media itself, through its policies, its positioning and audience. The second part focuses on practical skills. It includes listening, reformulation, argumentation, face to face communication, in groups or general public, as well as the mastery of oral intervention techniques to different types of audience and familiarization with media practices. |              |

|                       | This course is mainly based on an analytical explanation of the notional and conceptual fields used in social intervention; linking them to their different social and institutional uses as well as current social issues. It thus addresses several encompassing and encompassed notions and concepts including: planning, environment and space, individual, collective, social, societal, cultural, structural, intercultural, socio-cultural, community, etc., social pathology and therapy, social profitability, social development, underdevelopment, sustainable development, social change, partnership, co-operation, marginalization, social inclusion, awareness, commitment, citizenship, etc.                                                                                                                                                                                                   |              |

| <b>Pre-requisites</b> | SOC335                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |              |
|                       | This course enables students to understand the components of social intervention action on various socio-cultural, socio-educational, socio-political, socio-religious, and socio-economic plans related to community spaces, institutions and associations, through critically conscious, preventive and participant practices. Similarly, it aims to foster knowledge of cultural, socio-sportive and municipal structures. Upon completion of this course, the students will be able to identify the fields and practices of social intervention, to understand the issues related to the aforementioned fields and to think strategically as regards the levels of corresponding action.                                                                                                                                                                                                                   |              |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                              |              |

| This course familiarizes students with the various methods of research and analysis in the social sciences, and more specifically in sociology. Different methods will be illustrated with examples of sociological research. The course consists of three parts: a general introduction to social science research process; a presentation of the approach and systemic analysis; a deepening of quantitative and qualitative methods in sociology, such as structured interview, the survey (sample survey, etc.), observation, content analysis and focus group.                                                                                                                                                                                                                                                                                                                  |                                              |              |

| This course introduces students in social sciences to the world of business and management. The main themes are: forms of enterprise, business management, general and analytical accounting financial profitability, the choice of investments, financial ratios and the banking sector. The course also aims to acquaint the students with the economic, financial, legal and social world and address business valuation, financial distress, the company's management and private accounting. Upon completion of this course, students should be able to implement the choices of financing.                                                                                                                                                                                                                                                                                     |                                              |              |

| The course focuses on causal theories and comprehensive theories of deviance. It includes, firstly, a sociological analysis of deviance and social control to capture the relationship between individual freedoms and collective constraints, and also a sociological analysis of integration and social exclusion, in order to explore the question of social ties within contemporary societies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                              |              |
| <b>SOC422</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Political Sociology</b>                   | <b>3 cr.</b> |
| The course focuses on a central theme: power. This topic is treated in two parts with sub-themes which graft onto the central issue of the course. Indeed, the notion of power is undeniably linked to politics in its relation to the state and the social actor, as explained in the first part of this course. It is also an object of reflection and questioning, as shown by the study of different thinkers and sociologists of the twentieth century, in the second part of the course. Students learn not only to handle the theoretical concepts but also to build their own reflection in a methodical way. Ongoing exchange is operated between ideas of sociological conceptualization and the political reality.                                                                                                                                                        |                                              |              |
| <b>SOC423</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Organizational Sociology and Labor</b>    | <b>3 cr.</b> |
| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | SOC201                                       |              |
| This course provides a synthesis of different theories that explain structure, functioning and organizational transformation. In the first part, the course defines the field of analysis of the sociology of organizations as well as its main theoretical currents. In the second phase, it helps students comprehend the sociology of work in its various aspects and according to new trends (technology acceleration, globalization, current management of human resources, modern social stratification, activities of women, rising unemployment), i.e. according to the professional development of trades. In a third part, students are required to perform an observation of a specific field, through the use of certain analytical models and key concepts, allowing them to sociologically analyze concrete organization and institutional environments.               |                                              |              |
| <b>SOC426</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Theories and Practices of Development</b> | <b>3 cr.</b> |
| In the first part, the course deals with the development that emphasizes the human's central place as a social being, as well as the state and political structures in the organization of collective action for development. It also addresses the development of the entire population, its human potential, and both physical and intellectual progress through education. In the second part, the course introduces the unidimensional theories, evolutionists and structuralists of development, as well as planning techniques and development of agrarian and industrial policies. In the third part, the theoretical, methodological and strategic foundations of community development will be addressed.                                                                                                                                                                   |                                              |              |
| <b>SOC430</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Sociology of Religion</b>                 | <b>3 cr.</b> |
| The course aims to provide the students with an understanding of the social components of religion through the trends of thought and relevant sociological concepts. It also includes an analysis of contemporary social phenomena related to religion and an analytical positioning of the socio-cultural influences of religion in Lebanon.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                              |              |

| This course deals with the family in its various forms, which, while being universal, presents spatiotemporal peculiarities that the sociological analysis reveal, both structurally and functionally. The course offers a reflection on the circumstances and the contemporary transformations of the family institution (diversity of models, fragility of the marital bond, family recomposition), and draws a picture of sociological theories of the family, focusing on contemporary sociology specific to this area. Thus, the family, in new forms, appears as an element of sustainability among social turbulence, and as one of the pillars of postmodernism to study. It is therefore necessary to highlight the multiple varied relationships that link the family to the whole of society, with particular emphasis on the current situation of the family in Lebanon. |                                              |              |

| The overall objective of the course is to enable students to acquire the skills needed to analyze the many inter- and intra-societal conflicts. The course offers the challenge of a multidimensional approach: philosophical, sociological, psychological, political and otherwise. As a result, the four parts of the course present the root of the conflict phenomenon, the reasons of conflict, the conduct of conflict and conflict resolution. At the end of this course, students will be able to differentiate between the profound and circumstantial factors of conflict, to conceptualize the main theories of conflict, to identify elements of permanence and change in conflicts and carry out a critical analysis of this phenomenon and its future prospects.                                                                                                       |                                              |              |

| This course focuses on the various socio-economic issues of the policy of social protection. It processes the elements of information (actors, concepts, devices, tools) and susceptible analysis of students to enable them to participate effectively in the development of proposals for change in strategies and public policy environment, housing, and unemployment. Furthermore, it helps students to understand the components of community life and its challenges in the development of awareness necessary for a civil society. It thus explains the theoretical and practical elements necessary for a comprehensive understanding of the social security system, in order to locate public intervention in social protection. Upon completion of this course, the students will have acquired a capacity to analyze the existing associative dynamics in Lebanon.       |                                              |              |

| This course presents an overview of the techniques of demography, focuses on specific current issues of the demographic phenomena and analyzes their interdependence within social, economic and cultural characteristics of the observed society. Upon completion of this course, students will be able to collect the necessary demographic data to establish the main parameters (rates, ratios, tables, sex ratio, etc.), to build and analyze an age pyramid, to know the different sources of demographic data, to perform a population census, and to analyze the causes and consequences (social, economic, political) of demographic development.                                                                                                                                                                                                                           |                                              |              |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                  |              |

| This course provides students with the basic knowledge essential to perform a survey in the service of a search. For this purpose, a knowledge of all stages of an investigation, of the preparation (setting objectives, questionnaire design, and choice of sampling method) is required to collect data and prepare students for the analysis and presentation of results. Students will also learn to use SPSS for compiling the data and the analysis of results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                  |              |
| <b>SOC466</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Internship/Laboratory/Workshop</b>                            | <b>6 cr.</b> |
| The goal is to put into practice the theoretical and practical knowledge of the students in social sciences, and social intervention. This is the opportunity for immersing the students in the world of labor and this occurs through the following components: a) validating theoretical and practical knowledge and sharing experiences in an internship environment; b) designing the final report of internship that allows students to bring together their pre-professional practice with their achievements, in terms of knowing how to explain, how to write, how to design and how to negotiate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                  |              |
| <b>SOC506</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Institutional Sociology</b>                                   | <b>3 cr.</b> |
| This course focuses on the central role of institutions, in order to: a) understand social, economic, political, cultural and religious phenomena; b) define regularities in the behavior of individuals; c) reduce uncertainty; and d) render the aforementioned phenomena more predictable. It is articulated around three components: a) analysis of institutions through their various forms and functions; b) comprehension of the operational framework of institutions, such as frames of action, socialization forums, social hierarchy factors, etc.; and c) analysis of fitness levels that institutions exert on the individual and collective behavior in an evaluative perspective of the mutations and crises faced by some large contemporary institutions.                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                  |              |
| <b>SOC511</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Short-term and Structural Adjustment of Economic policies</b> | <b>3 cr.</b> |
| The analysis of certain economic, cyclical and structural policies, allows examination through a strategic rationale for both the permanence of public and economic intervention and the transformations of its purposes and modalities. On the one hand, state economic intervention is questioned as much for its objectives and legitimacy rather than its effectiveness. On the other hand, the economic intervention of other subnational actors, such as local and supranational authorities within the European Union and international organizations, is advanced to raise the issue of coordination of these policies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                  |              |
| <b>SOC513</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Ethnology</b>                                                 | <b>3 cr.</b> |
| This course highlights the major themes of ethnology. Thus, it deals in the form of reading, with a historical analysis of various research in Arabic ethnology; particularly Middle Eastern ethnology. The course offers some topics for study about the familial, cultural, political, social and economic plan, such as beliefs, the concept of democracy, development and underdevelopment, etc. The main focus of the course covers the pluralistic identity of the Middle East where the various components have been rather supportive for thousands of years, despite the differences that distinguish and characterize the widely diverse social fabric.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                  |              |

| This course locates the rural and urban worlds within the general framework of human activities and their changes. It synthesizes teachings on rural social environments and urban ones. It touches upon the main sociological trends that are interested in rural as well as urban sociology. Therefore, this course pays special attention to learning the conceptual tools that characterize a sociological approach applied to the problem of space. In this manner, it analyzes the dynamics of different urban functions (housing, industry, services, travel, and communication) by describing their interaction on the ground (especially urban), the way in which the evolution of these different functions and structures operate and deconstructs the territory in general and the city in particular. It also focuses on the reconstruction of cities.                                                                                                                                                                                                                                                                                                         |                                                                  |              |
| <b>SOC596</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Project/Internship in Social Sciences</b>                     | <b>3 cr.</b> |
| The first part is pre-project design in TIS (1cr). This is a seminar which leads to a pre-project in terms of methodological approach (preparatory phase, implementation phase, evaluation phase). It enables the students to choose a subject in social sciences, identify tools and ideas leading to concrete results. The knowledge required, with reference to the application of research, also will be developed. Upon completion of the seminar, the students are required to prepare a typescript draft of twenty pages. The second part is the internship (2cr). The two credits assigned to the course propose putting into practice, in terms of action, the topic chosen by students in social sciences. In this phase, students develop their internship in accordance with their subject and methodological bases specific to the design and evaluation of the pre-project in SCO acquired in the internship seminar. A prospective director appointed by the department will be responsible for supervising the students in the guidance of theoretical and practical foundations and in the conceptualization and evaluation of the corresponding response. |                                                                  |              |
| <b>SOC638</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Sociology of Minorities</b>                                   | <b>3 cr.</b> |
| This course is aimed at the acquisition of theoretical and empirical knowledge regarding issues of the sociology of ethno-cultural minorities and interethnic relations. It enables students to define the minor situation in various societies by appealing to designs, visions and studies of a number of sociologists, in particular the German sociologist Max Weber and French sociologist Pierre-Jean Simon.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                  |              |
| <b>SOC639</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Sociology of Culture and Leisure</b>                          | <b>3 cr.</b> |
| The course is designed to research culture and leisure, in terms of theories, relevant sociological approaches, and also cultural practices and interculturalism. This course is built around the following axes: a) problematization of culture and leisure concepts based on an analytical presentation of the main theoretical currents in sociology, and the relationship between the cultural, economic and political spheres; b) analysis of the relationships between leisure - society - culture through the perspective of links between the main features of culture, recreation and sustainable development, the main features of leisure and its relationship with the family fields (political, educational, socio-cultural, etc.); c) proposition of analysis tools and cultural practices through the individual dimensions, institutional and political; d) putting in theoretical and practical terms; e) analysis of contemporary approaches of interculturalism and intercultural dialogue; and e) reflection on mass culture - its place and its impact within contemporary societies.                                                                  |                                                                  |              |
| <b>SOC691</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Professional Practices</b>                                    | <b>3 cr.</b> |
| This course gives to the student a space for reflection and practice of deepening of professional practices in social sciences. In the first part, it summarizes the paradigms, themes, theories and research methods in the social sciences at both national and international levels. In a third part it builds a platform for critical analysis of concrete situations and different problems, and this, for planning of a research program, databases and monitoring process of the team to implement (in relation with the theme of the chosen project).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                  |              |
| <b>SOC692</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Project in Social Sciences</b>                                | <b>3 cr.</b> |
| The project is a professional continuous training in Social sciences (SCO). The objective of the project is to make the student in Master degree a reflexive practitioner, able to identify a problem and respond by referring to the appropriate literature to the problem identified, followed by an implementation of an action plan that contributes to a solution or a recommendation. The project is being developed in a research work from 45 to 50 pages as the body text that includes the personal, technical and scientific criteria that motivated the student to undertake the project; the appropriate literature in the research project, field work and a solution perspective, remediation, or new thinking on an issue or a problem, etc., and a conclusion. (bibliography, annexes, are not part of the body of the text).                                                                                                                                                                                                                                                                                                                              |                                                                  |              |
| <b>SPC505</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Fundamentals of Pedagogical Training</b>                      | <b>3 cr.</b> |

This course coaches trainers who act in the context of the establishment and the institutional functioning of the educational training activities: supervision, coordination, training of teachers. It introduces to the students, the future trainers, the principles of the trainer function, namely to learn how to perform the study of training requests of any kind, how to analyze the needs, define the objectives of training, implement training plans and how to organize materially and educationally internships. This work will largely depend on the attitude, behavior and motivation of the trainer, analyzed in the course in light of data as of the training of trainers. Undeniably, and before considering the ways implemented, which change according to every difficulty, it is notable that the trainer verifies his motives and those of teachers and elucidates his formative project to further his method towards the goals he sets himself.

**SPC510 Educational and Professional Guidance 3 cr.**

This course deals with the orientation as a deeply interactive operation among secondary school students and further throughout the school as well as at every stage of the orientation process through exploration and discovery of trades. This presupposes to enrich their performances of professional prospects and uncover business lines, not only through data sheets and job profiles, but also discovering what this profession is in the labor market, through observation and simulated professional integration in the course and as from approximation of training towards the working world. The orientation will be taken as a process of transition from school to working life. The orientation will be taken as a process of transition from school to working life. The course also presents the major international referral mechanisms and the role of orientation professionals, based on a reflective approach from which students will make informed choices.

**SPC520 Pedagogical Intervention and Accompaniment 3 cr.**

This course provides students with educational coaching and intervention principles among teachers, aiming at developing professional expertise of the latter and help them succeed in school practices. The intervention of a trainer in a group of teachers in training will take a controlling character that can be accomplished through professional gestures and pedagogical actions in the field of the phenomena related to the time of teaching or animation properly so called, its specific constraints (didactic situations), its specific job (working methods) and its specific instruments (teaching techniques). It is also helping teachers to provide tools to edit and arrange them according to their practice and eventually invent new ones best suited to their goals and needs.

**SPC605 Institutional Communication 3 cr.**

The psych sociological training involves primarily the person's training, allowing each teacher to develop his formative potentialities in educational relations, such as: the relationship trainer-trained or teacher-learner, the relationship in the group (class group, in particular), relations in the institution (children, colleagues and management), and relations outside the institution. Such training must restore, even so, consciousness to teachers of their fundamental role in the future of individuals and institutions. Priority is given to the creation of a group living environment for everyone to feel comfortable and be able to get involved in both relationships and debates to investigate problems of training and their solution. It must further promote the flow of information so that all group members possess the necessary elements for their reflection, enable decisions necessary for the group action, to use all means appropriate to facilitate the course of trade.

**SRO301 Education in Faith 3 cr.**

Faith is the unifying and building agent of the Christian person and the Church. Thus, the believer finds growth or even the realization of his being in God his Creator and Savior. In addition, the Church, the Mystical Body of Jesus, by its experience of communion among its different members, is the "mother" feeding her children so they reach out to Christ. This course presents the main ideas of the Christian faith that contribute to the development of the students believing identity and their participation in the ecclesial community.

**SRO302 Management of Cultural and Religious Diversity 3 cr.**

The world has become a "small village" open to any type of belief or culture. Therefore, no one can pretend to live in an "island". The encounter with the "other", now becoming daily, requires some preparation in order to spare ourselves unnecessary conflict. This course presents the main ideas of the existing religions and cultures in our environment; with a practical introduction to interfaith and cultural dialogue.

**SRO510 Pastoral Reading of the Gospels 3 cr.**

This course aims at introducing the most important characteristics of the four Gospels (Matthew, Mark, Luke and John) and to perceive them as a catechesis designed to meet the needs of the Christian community to which they are addressed. This course also covers the major themes of the Gospels and allows students to be challenged by the Evangelists on an announcement that reflects the needs of today's communities.

**SRO515 Psalms and Biblical Wisdom: Spirituality of Daily Life 3 cr.**

How to understand and assimilate the Psalms and biblical wisdom and their spiritualities? On the one hand, how are the Psalms words of God for believers today? How do they help us better understand the mystery of Christ? How are they prayers of humanity? And what life lessons do we learn in the search for God and happiness?

**SRO520 Symbolic Means of Religions (Prayers, Rites, Meditation) 2 cr.**

Our faith in the living God is not only fed by experiences and ideas, feelings and actions, but also great symbols and powerful images. To speak of the encounter with the living God, the Bible uses prayer, rites and places that marked the Jewish people and the early Christians and have acquired a symbolic significance. The course will allow the exploration of these symbolic meanings, an identification of the spirituality attached to them and a reading of our experience in the light of these symbolic meanings.

**SRO525 Development, Religion, Culture and Society 2 cr.**

The course addresses the issue of development in an intercultural perspective and in relation to the different religious and socio-cultural areas within a single culture. It also aims to show the interrelations between concepts, research methods and complexity of socio-cultural changes; and identify problems related to the transposition of assessment instruments from one religion to another and from one culture to another, as well as outline the educational implications and the clinical perspectives.

**SRO530 What is Believing? 3 cr.**

What does "believe" mean in our time? Does God still reveal himself today? If so, how? In a world marked by science and technology, believing is becoming more difficult to explain. If one admits the spiritual search, it is very laborious to account for personal faith in the God of Jesus Christ. This course will enable students to become familiar with these two great themes of fundamental theology that are revelation and faith. Students will reflect on the human act of believing and the distinctions between spirituality/religion/faith. In addition to historical and theological considerations, this course tackles the transfer from Vatican I to Vatican II. Then it deepens the revelation as the mystery of God's communication that occurs in the heart of history and human existence.

**SRO535 Schools of Great Christian Spirituality 3 cr.**

Christian spiritualities offer a great diversity of life paths for believers. These spiritualities aim to help them, through prayer and action, to become more human, to follow the Christ. Every Christian school of spirituality is inspired by a great saint and pours in it its originality.

Although its schools are coming from very different eras and contexts in the history of the Church, their inspiration (from monastic, active life, apostolic life, mystic life and contemporary life) always remains current. Through different faces of the saints, the course invites students to find which spirituality schools they belong to.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                    |              |

| As part of this course students will be confronted with the foundations of the ethics of major religions, especially in the following areas: building an ethical discourse from the three dimensions that comprise it (universal, particular and singular), the human person, freedom, conscience, forgiveness, evil and suffering, and salvation. Students are invited to link these different foundations to a specific ethics issue (bioethics, social ethics) that they choose themselves and that they will present during the exam.                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                    |              |

| This course prepares students for the practical use of probability and statistics in the biomedical field (agronomy, chemistry, biochemistry, nutrition, medicine, etc.). Topics covered are: elements of descriptive statistics, population, statistical unit, frequency distribution characteristic of central tendency and dispersion; concepts of probability and combinatorics, conditional probability and Bayes' formula, applications, discrete and continuous random variables, expectation and moments, weak law of large numbers, empirical frequencies and probabilities customary laws (Binomial, Multinomial, Poisson, Normal) and asymptotic behavior, the law of large numbers, sampling and estimation, introduction to the use of hypothesis tests, and the Chi-2 contingency table.                                                                                                                                          |                                                                    |              |
| <b>STA320</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Applied Probability and Statistics</b>                          | <b>3 cr.</b> |

| This course aims to provide students with the most common concepts of probability theory and statistical inference, with a unique balance between theory and methodology. Interesting relevant applications using real data will be used to show how the concepts and methods can be applied to solve science problems in practice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                    |              |
| <b>STA321</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Descriptive Statistics</b>                                      | <b>3 cr.</b> |

| Descriptive statistics is to summarize quantitative information gathered on a concrete universe through an exhaustive investigation, such as the population of a country studied through a general census. Its purpose is not to explain but to describe, identify the essential and carry out syntheses using the numerical language. In this course, we study the statistical distributions of one and two characters, graphics and summaries of the major numerical knowledge of a distribution, time series and index number theory. At the end of this course, the student will be able to achieve a general descriptive study of the data series of one or several variables; he became familiar with the concept of regression and particularly linear regression. He will learn to decompose a time series and to make predictions. Finally, he would be able to calculate and understand key numeric indices widely used in economics. |                                                                    |              |

| This course reviews and expands upon core topics in probability and statistics through the study and practice of data analysis. Topics include sampling methods, numerical and graphical summaries of data, parametric and non-parametric hypothesis testing, confidence intervals, analysis of variance, and regression. Upon completion of this course, students should be able to think critically about data and apply standard statistical inference procedures to draw conclusions from such analyses. This course will be computationally intensive and will use the SPSS software for statistical computing and graphics.                                                                                                                                                                                                                                                                                                               |                                                                    |              |
| <b>STA335</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Statistical Survey and Analysis</b>                             | <b>1 cr.</b> |
| Under the direction of the teacher, students will use a statistical survey on a small sample and prepare one or more documents that are a synthesis of the results. The methods will be adapted to the size of the sample. An attention will be paid to criticism and interpretation of the results as well as to the relationship between the statistical results and other sources (qualitative observations, literature).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                    |              |
| <b>STA540</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Random Modeling and Introduction to Stochastic Calculations</b> | <b>3 cr.</b> |
| The main objective of this course is to initiate the students to the concept of random processes used in modeling of random phenomena. It focuses on the discrete Markov process or more commonly Markov chains. In the case of homogenous Markov chains we consider the set of States, the transition matrix, the initial distribution and the distributions at different times, the Chapman-Kolmogorov relationship, classification of States (stability, periodicity and recurrence), absorption in stable classes, stationary distribution, Newton diffusion gas problem, problem of the players ruin, one-dimensional random walk, multidimensional random walk, and study of the Poisson process and queues theory.                                                                                                                                                                                                                       |                                                                    |              |
| <b>STA515</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Statistical Analysis Methods</b>                                | <b>3 cr.</b> |
| The purpose of this course is to strengthen the knowledge of students in the field of applied statistics by minimizing the mathematical approach and developing practical and methodological aspects. It presents the main techniques of most known statistical tests (descriptive and inferential statistics, explanatory methods, and data analysis). The course provides an overview and practical main methods available in software, with an aid to the interpretation of the results and through fully processed examples using the statistical software SPSS. Most of the themes will be covered by this course including the analysis of Variance (ANOVA test), comparisons of samples (t-test and Chi-square), single and multiple regression.                                                                                                                                                                                         |                                                                    |              |
| <b>THEO212</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Synoptics and Acts of the Apostles</b>                          | <b>3 cr.</b> |

| The synoptic writings are introduced in this course, namely: the Gospels of Mark, Matthew and Luke, in addition to the Acts of the Apostles which is the second volume of the Lucan work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                    |              |
| The course starts with an introduction on the "synoptic question" and the adoption of the modified theory of the two documents, followed by the study of each of these writings and their most important themes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                    |              |
| The approach is synchronic. The method adopted is criticism of the composition which is a specification of the writing criticism which reviews the editorial activity of the author in order to discover the theological thought.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                    |              |
| <b>THEO221</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Ecumenism</b>                                                   | <b>2 cr.</b> |
| This course meets the recommendation of the Second Vatican Council to give future pastors of the Church, and also all believers, an ecumenical education which aims to strive for the construction of one Church of Christ in the world. This education is especially important in the life of our Oriental Churches that live beside one another.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                    |              |
| After presenting the unity challenge and the divisions danger, especially the roots of certain doctrinal issues, their branching and development throughout history, the course explores the situations of today's Churches and Christian communities, explains the foundations of ecumenical behavior, and determines ways that contribute to the reestablishment of Christian unity. The course outlines clearly the history of the ecumenical movement which emerged in the early twentieth century and which had deeply influenced the life of various Churches, by stimulating the desire for visible unity and communion among all Christians.                                                                                                                                                                                                                                                                                            |                                                                    |              |
| <b>THEO241</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Basics of Sacramental Theology and Liturgy</b>                  | <b>3 cr.</b> |

The sacraments cannot be understood or experienced unless they are based on a fundamental theological approach that highlights the sacramentality of the Church in relation to the salvation of Christ and the active role of the Holy Spirit. The objective of this course is to shed light on this approach and introduce students to the extensive and particular study of each sacrament.

The sacraments are celebrated in the community and communicate the energies of the Risen Christ by the action of the Holy Spirit. This celebration is always liturgical. For this reason, it is important to have an introduction to the theology of the liturgy of the Church and the Churches (especially Oriental) which determines the theological or ecclesial foundations, and underlines liturgical practices in relation to the celebration of the whole Christian ministry.

**THEO251                      Fundamental Moral Theology                      3 cr.**

This course deals with the Christian action in a rational process, while relying on the Holy Scripture, and placing Tradition, Magisterium and human sciences within a contemporary situation scenario.

The course will particularly address: Biblical perspectives of moral theology, its creative evolution and fundamental principles, such as freedom, responsibility, will, the good and the bad in the act, conscience, law, sin, conversion, salvation and revelation, theological and human virtues, bliss as the end of all Christian actions.

Following a careful reading of the Veritatis Splendor encyclical and the document of the International Theological Commission on the natural law, we will present some new perspectives for moral thoughts, illustrated and enlightened by two concrete examples.

**THEO312                      Authorship of the Johannine Works                      3 cr.**

This is an introduction to the Johannine corpus, with particular emphasis on the fourth Gospel. The course will focus on the texts themselves, and on the different environments of their composition. In order to approach these testimonies of faith, passages under study are resituated in the historical context of their development and analyzed using narrative and rhetorical strategies used by the authors of communal and personal literary books.

**THEO321                      Theology of Religions                      3 cr.**

The course presents the Christian theology of religions within a perspective of fundamental theology in dialogue with other theological disciplines (anthropological, Christological, Trinitarian, ecclesiological and practical). Teaching focuses on the development of theology from the Second Vatican Council and aims to introduce students to the extensive reading of the relevant main texts of the Magisterium.

**THEO341                      Sacraments of Christian Initiation                      3 cr.**

The course aims to highlight the theological foundations of the Sacraments of Initiation: baptism which gives access to the Body of Christ and the divine adoption, completed by the confirmation that is the work of the Holy Spirit living in the heart of the believers as in a temple, and crowned by the Eucharist which is the real and historical incorporation into the ecclesial body of Christ. The course is largely based on the baptism catechesis of Cyril of Jerusalem, Theodore of Mopsuestia and John Chrysostom, and shows the evolution of sacramental doctrine of the Church with special emphasis on the teaching of the Council of Trent.

**THEO361                      Pastoral Theology Practice                      3 cr.**

This course is an introduction to pastoral and practical theology. If theology was the Christian faith in search of its intelligence, the theological disciplines that offer theology students the keys to the broad "Science of God" and to its salvation in the world would be numerous and various. Practical (and pastoral) theology is one of these disciplines, but with the distinction of being more oriented towards the Christian praxis which brings together the different aspects of the Christian faith and its various transmissions in communities, parishes, groups, catechesis or others. The Christian experience is understood at this point as a "response" to the Word of God received by Revelation and "recovered" in the Tradition. This experience is "imposed" in practical (and pastoral) theology in a theological place where intelligence of the Christian faith occurs.

This discipline, as entitled in this course (pastoral and practical), covers two levels of thinking and research; the first "empirical" and the second "applied". The empirical level is that of practical theology which proceeds to an analytical reading of how faith is experienced among the People of God (theology of practice). The "applied" level is that of the pastoral theology which seeks to find the best way to convey and accompany faith among the People of God. In their quests of meaning, both types of theology, pastoral and practical, refer to theological knowledge conferred by all other theological disciplines, as well as to many other disciplines related to human sciences and others.

**THEO411                      Pauline Corpus                      3 cr.**

The course mainly focuses on the thirteen epistles which are part of the Pauline school. It covers the epistles ranging from the Romans to Philemon, as ranked by our Bibles.

Before studying the epistles themselves, we start with two preliminary parts. The first part studies the life of the Saint according to the Acts and to the epistles; the second part presents the epistolary genre, the categories of epistles and some hints for a better understanding of the studied epistles.

**THEO421                      Islam                      3 cr.**

This course is an introduction to Islam, as both a religion and a tradition consisting of various schools of thought. After examining the origin of Islam and the history and themes of the Quran, it approaches the major doctrinal and philosophical patterns of the different branches of Islam and their practices. Students are encouraged to engage in a dialogue with Muslims who constitute the major religion in the region.

**THEO431                      Christian Anthropology                      3 cr.**

This course consists of three distinct parts, namely: the pact of creation, the pact of original sin and the pact of grace. It aims to explain the content of the Christian doctrine of creation of the human being in God's image, with different biblical positions in opposition to scientific theories of origins. Then, the course examines the doctrine of original sin and attempts to formulate the problem of evil by explaining the impact of sin on the situation of the human being. After a brief overview on the scriptural doctrine of the original sin, we cover the Augustinian doctrine of the original sin, by reviewing ecclesial decisions and scholastic theology. At the end of the course, we tackle the theme of grace in order to better grasp the significance of salvation that culminates in the incarnation of Christ and the meaning of the human being's life as a creature totally open to Him, and this in communion with all creatures.

**THEO441                      Ministries and Healing Sacraments                      3 cr.**

This course aims to help students discover the theological foundations of ministries and the sacraments of healing, repentance and anointing the sick. The question of ministries is a particularly important chapter of ecclesiology, simply because the departments are above all in the service of the Church. This issue entails multiple dimensions: historical, sociological, theological, canonic, pastoral, and ecumenical, and it is conditioned by the realities of church life and, consequently, subject to constant evolution.

**THEO471                      History of Modern and Contemporary Church                      3 cr.**

This course covers five centuries, from the Renaissance Church (16th century) to Vatican II (1962-1965), and includes two parts: the first part focuses on the Renaissance in addition to the Protestant and Catholic reforms; the second part tackles the 19th and 20th century, the era of revolutions and adaptations. Luther's revolt in the 16th century and the 1789 Revolution are main events for society and the Church. What had paved the way for them? Who are the main actors and what are their motivations? What were the challenges facing the Church in all fields, both doctrinal and pastoral, life of the clergy and involvement of the lay persons? A council marks each studied period: the Council of Trent and the Second Vatican Council. We

examine how each of them blends tradition and adaptation, their development, their key documents, their receipt, their actors and especially the Popes John XXIII to John Paul II. This course helps students learn to "read the signs of the times" through world events, in the middle of which the People of God live and to whom He was sent.

|                                                                                                                                                                                                                                                                                                                                                                                        |                                                   |              |

| This course focuses on the semiotic analysis and performance studies. The students will distinguish semiotic systems and codes of performances. They will relate the study of motion to mimic codes and the semiotic function of the body of the performer. They will analyze the relation between the performer and the performance, as well as the relation with the audience focusing on the mechanisms of the reception, taking into account all the elements of performing arts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                   |               |

| This course aims to prepare students to examine criticism in theatre in a scholarly form. It introduces them to different methods in carrying out a research and acquaints them with a range of bibliographies and references relevant to the subject area. The course builds on the basic understanding of research.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                   |               |

| This course investigates the main theories used in Drama therapy. Students will integrate 30 hours clinical participative observation in their work. They will compare multiple methods of evaluation. They will be confronted with different clinical and therapeutic approaches always keeping the ethical dimension perspective.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                   |               |
| <b>THT624</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Topics (Dramaturgy, Writing)</b>                               | <b>3 cr.</b>  |
| This course explores ideas of form, convention, style and context in performing arts. It focuses on different approaches to specified topics or schools. This is a research course that aims for a practical experimentation in relation with what is being researched. Apart from the research, the films and the documentaries studied, students will be encouraged to meet professionals who have worked in the field and try to conduct their own experiments in applying these approaches.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                   |               |
| <b>THT626</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Methodology &amp; Thematic Seminar</b>                         | <b>2 cr.</b>  |
| This seminar prepares students to work on specific themes related to the specialization. The research goes in depth into the most common data collection methods (interview, focus group and participant observation) and a selection of current data analysis approaches (thematic analysis, phenomenological analysis) in qualitative and quantitative research. The course also looks at the various criteria used to assess qualitative and quantitative research work and writing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                   |               |
| <b>THT631</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Psyche in Arts</b>                                             | <b>3 cr.</b>  |
| In this course, the students will learn how to extrapolate the emotion and the psyche then translate them into verbal and physical expression.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                   |               |

| This course will include the intervention of art therapists with different methodologies and specializations in the form of courses and workshops. It could lead to participation in international congresses. At the end of this course, students will be able to assess the methodologies studied and choose which ones to apply. They will demonstrate the capacity to participate in a symposium.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                   |               |

| This course will study the main categories of psychopathology (neurosis, borderline cases, psychosis...etc.). The students will integrate practices in different fields of application of art therapy. They will compile case studies and the contribution of arts therapies to treatments. The course will be illustrated by clinical cases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                   |               |
| <b>THT636</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Psychodrama or Sociodrama</b>                                  | <b>3 cr.</b>  |
| Course could be all psychodrama, all sociodrama or a combination of both. Sociometry should be covered in psychodrama and sociodrama courses. Students study the history of J. L. Moreno and the development of psychodrama. They discuss and experience the five instruments of psychodrama: the director, protagonist, auxiliaries, audience, and stage; the structure of a psychodrama: warm-up, enactment, de-rolling, and sharing; and key techniques such as the auxiliary ego, doubling, role playing and role reversal. Principles and techniques of sociometry are addressed. The use of psychodrama with various populations is discussed.                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                   |               |
| <b>THT640</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Executive Policy of Artistic Production</b>                    | <b>3 cr.</b>  |
| This course will explore what makes a successful arts and cultural organization and will introduce students to a management theory which supports thriving arts and cultural organizations. The course is conceived as a simple, but powerful tool to assist managers in their effort to respond to an increasingly complex environment and propel their institutions to excellence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                   |               |
| <b>THT645</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Tour and Festival Strategies</b>                               | <b>3 cr.</b>  |
| In this course, students will learn the process that will take them from conceiving a cultural event or a festival, to creating and organizing it. They will have to discover and implement appropriate funding and marketing strategies. The students will demonstrate the capacity of touring such a project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                   |               |

| After a thorough research in a specific subject, students will indulge in the creation of a personal project. It can also be the application, or the reproduction of a work related to their field of study. Apart from the research paper, the personal project can be an art therapy action/process, or a performance, a cultural event, a festival...etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                   |               |

| The Master Program in Performing Arts in all its emphases aims to train students in Drama therapy, theatre and drama studies and in creative production. It also prepares them to handle different professions in performing arts as soon as they graduate. It provides expertise in diverse fields of performing arts. Professors who are both practitioners and scholars will supervise students. Students will have the opportunity to work with professional directors, art therapists, and consultants pertaining to artistic and clinical milieus. The program is designed to provide graduates with academic knowledge and practical knowhow tailored to local and regional employment needs. The graduates will have the possibility to work as actors, directors, producers, artistic consultants, stage managers, festival curators, administrators of cultural and/or therapeutic centers, drama therapists, counselors in precarious environments or other mainstream professionals working with elders and children with special needs etc... |                                                                   |               |
| <b>THT670A</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Master Thesis</b>                                              | <b>6 cr.5</b> |

This course prepares students to submit a document in support of their candidature for the master's degree. It is intended to write the final thesis on a specific subject chosen after agreement with the research director and in application of the acquired methodology.

| <p>This course will be divided into two parts: a) Preproject design in TIS (1cr) This is a seminar which leads to a pre-project in terms of methodological approach (preparatory phase, implementation phase, evaluation phase). It allows the student to set a subject in labor and social intervention, and identify tools and ideas which will lead to concrete results. The knowledge required, with reference to the application of the assessment methods of institutional, collective and social intervention will also be developed. Upon completion of the seminar, the student is required to prepare a typescript draft of twenty pages. b) Internship (2cr) The two credits assigned to the course propose putting into practice, in terms of action, the topic chosen by students in labor and social intervention. In this phase students develop their internship in accordance with their subject and methodological bases specific to the design and evaluation of the pre project in TIS acquired in the internship seminar. A prospective director appointed by the Department will be responsible to supervise the student in the delimitation of the theoretical and practical foundations and in the conceptualization and evaluation of the corresponding response. Introductory notes consecrated to the ethics of professional practice in labor and social Intervention. They have the following objectives: 1) To raise awareness in future social workers, of their own ethical positions, and in explaining and criticizing them; 2) To analyze the ethical conflicts that arise in labor fields of action and social intervention; 3) To become equipped to argue in support of professional positions founded and estimated ethically and thus develop testing of stress management, conflict and time. Upon completion of the course, a ratio of 20 typescript pages linked to the end of the dissertation, is presented by the student.</p> |                                                            |              |
| <b>TIS605</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Management and Group Facilitation</b>                   | <b>3 cr.</b> |
| <p>This course aims to develop the skills of students in management and group facilitation. It offers a reading of group and communication phenomena, as well as learning methods and animation techniques in accordance with the types of group and societal and cultural situations. Similarly, knowledge of theories in working with small groups allows students to understand the dynamics of a team and interact appropriately to different situations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                            |              |

| <p>This course trains students in theories, methods, paradigms and sociological concepts intended for analysis and practice of public policy, and those of administrative systems. The course provides an analysis of the interventions of public authorities (State, local authorities, etc.) from the company, through their various functions. It focuses on the development of the constitution of the administrative system, its components, its actors and its role. It enables students to take ownership of a methodological approach and a toolbox for the analysis of public action in a particular field. Several lines of investigation and analysis of administrative practices are also available to students.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                            |              |

| <p>This course allows students to experiment and perform their institutional and community response capabilities. To do this, they will be incorporated into municipal spaces or local development NGO specialists, where they will be called to build an intervention project and corresponding policy proposals.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                            |              |
| <b>TIS630</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Governance and Ethics</b>                               | <b>3 cr.</b> |
| <p>The objective of this course is to form social actors capable of identifying and building the main uses of governance of associative and organizational environments in concordance with theories and communicative approaches, as well as their proper ethical basis. The course covers the following: a) To clarify the concept of associative governance through its constituent dimensions and areas; b) Define the communication process, relations with the environment and ethical approaches in terms of social responsibility; c) Identify appropriate communicative approaches to sustainable development.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                            |              |

| <p>This course trains students to design and understand the implementation of social responsibility programs in various types of organizations and societal areas, all in a perspective of sustainable development. It has the following learning objectives: a) Master the theoretical and conceptual foundations of the concepts of social responsibility and sustainable development; b) Know the methods and techniques to develop a perspective and proposals for action related to such notions, and to assess their relevance; c) Observe and compare social responsibility projects developed in the spirit and scope of strategic sustainable development.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                            |              |
| <b>TIS640</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Advanced Practices in Community Social Intervention</b> | <b>3 cr.</b> |
| <p>This course is designed for the mastery and knowledge, both theoretical and practical, of methodology of intervention in community settings, especially in terms of local development. In addition to the application exerted through the study of conducted monographs, concepts and varied topics - such as awareness, public education, and heritage action will also be taught as a tool for local development. Movements, trade unionism, etc. will be further developed and reinvested in projects being done by the students.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                            |              |

| <p>This course will be divided into two parts: a) Preproject design in TIS (1cr) This is a seminar which leads to a pre-project in terms of methodological approach (preparatory phase, implementation phase, evaluation phase). It allows the student to set a subject in labor and social intervention, and identify tools and ideas which will lead to concrete results. The knowledge required, with reference to the application of the assessment methods of institutional, collective and social intervention will also be developed. Upon completion of the seminar, the student is required to prepare a typescript draft of twenty pages. b) Internship (2cr) The two credits assigned to the course propose putting into practice, in terms of action, the topic chosen by students in labor and social intervention. In this phase students develop their internship in accordance with their subject and methodological bases specific to the design and evaluation of the pre project in TIS acquired in the internship seminar. A prospective director appointed by the Department will be responsible to supervise the student in the delimitation of the theoretical and practical foundations and in the conceptualization and evaluation of the corresponding response. Introductory notes consecrated to the ethics of professional practice in labor and social Intervention. They have the following objectives: 1) To raise awareness in future social workers, of their own ethical positions, and in explaining and criticizing them; 2) To analyze the ethical conflicts that arise in labor fields of action and social intervention; 3) To become equipped to argue in support of professional positions founded and estimated ethically and thus develop testing of stress management, conflict and time. Upon completion of the course, a ratio of 20 typescript pages linked to the end of the dissertation, is presented by the student.</p> |                                                            |              |
| <b>TIS692</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Project in Intervention and Social Work</b>             | <b>3 cr.</b> |

The project is a professional continuous training in Intervention and Social Work (TIS). The objective of the project is to make the student in Master degree a reflexive practitioner, able to identify a problem and respond by referring to the appropriate literature to the problem identified, followed by an implementation of an action plan that contributes to a solution or a recommendation. The project is being developed in a research work from 45 to 50 pages as the body text that includes the personal, technical and scientific criteria that motivated the student to undertake the project; the appropriate literature in the research project, field work and a solution perspective, remediation, or new thinking on an issue or a problem, etc., and a conclusion. (bibliography, annexes, are not part of the body of the text).

| To study the "documentary problem" through definitions, works, styles, forms, strategies, attitudes, conventions, practitioners, and history of documentary film. Using the central concept of 'voice' or that, which conveys the sense of a text social point of view, or how the film speaks to the viewer and how it organizes the historical material it presents, we will investigate current theoretical debates and dilemmas in documentary filmmaking, discussing both form and content as we consider the variable boundaries of the documentary film. Particular attention will also be paid to the social and political documentary that has been a key component of the genre. |                                             |              |
| <b>TLV652</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Sound Recording</b>                      | <b>3 cr.</b> |
| student will acquire recording techniques and editing. Student will learn to use various microphones effectively to record sound and voice on location and in a controlled environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                             |              |

**Pre-requisites** LFR201 and ARA210

This course's objective is to introduce the student to the preliminary Translation strategies, let him acquire its techniques, and apply these general rules by solving exercises. It introduces the student to different types of translation: general translation and mainly journalistic translation, the literary, philosophical, poetic, scientific (ecological, medical, technological...), economical, religious, legal translations... It familiarizes him with the technical procedures of translation that he will use in his professional life.

**TRD310 Methodology and Rules of Translation 2 cr.**

The goal of this course is to bring students to discover, by themselves and through texts, the fundamental principles of "Translation Studies" by making them confront its various theories. It also allows them to go beyond the limits of correspondence translation (transcoding), towards interpretive translation or by equivalences, by giving the context as much importance as the text, and by helping them understand, through practice, the stages and the mechanisms of the interpretive theory of translation.

**TRD321 General Translation A-B/B-A 3 cr.**

**Pre-requisites** LFR201 and (ARA210 or LLA210)

This course is designed to exercise linguistic habits (competence and performance) of students, to enable them to translate a French text into Arabic and vice versa, making it easy to read and avoiding, as far as possible, the usual interference.

**TRD322 General Translation A-C/C-A I 3 cr.**

**Pre-requisites** TRD220 and ENG240

The objective of this course is to introduce students to translation from Arabic into English and vice versa, through a wide variety of texts that may range from technical and scientific to literary; with emphasis on the concepts in both languages rather than on lists of vocabulary.

**TRD415 Computer-Assisted Translation 2 cr.**

**Pre-requisites** TRD321

This course aims at familiarizing students with the translation using the various useful computer tools necessary for their work as professional translators, or other similar professions that deals with languages (editor, publisher, journalist, etc.).

The Computer-Assisted Translation (CAT) consists of a set of tools designed to introduce the student to use the computer in his practice of translation. It is designed to guide them through using software, terminology databases, electronic and online dictionaries, and language programs. Thus, the SDL Trados Studio 2014 software, was installed specifically for this course to introduce students to its use. This software is a CAT tool, a translation memory software which helps the students to translate faster, and better manage their translation projects. The importance of this software lies in the ability to create a database that could be inserted into the software memory

The use of technological tools in translation appears with the effective use of various monolingual and multilingual dictionaries, in addition to the good use of the translation software and ensure consistency of terminology and syntax in translation.

In addition, this course is a practical application of translation using the computer as a tool supporting the translation work, and it introduces students to the fast delivery of translation projects in a proper time management.

**TRD416 Linguistics and Translation 3 cr.**

This course aims to make students aware of the fact that the advent of the first language and terminology had some impact on the translation process. It assesses the contribution of linguistic and terminology in translation studies, explaining how the translators accept the science of language as a precision tool in their professional practice. On the theoretical level, it will explain the decisive influence of language and terminology on translation, in the context of structuralism, Europe, the Prague Circle, and the United States, under the leadership of Eugene Nada, whose work marked a new attitude showing that translation is no longer considered as only an art. Finally, it will demonstrate how the theoreticians of language and terminology are many, and to emphasize the need to link the theory of translation to a theory of language. In practical terms, this course will include an overview of the morphology, lexicography, lexicology and terminology, etc.

**TRD421 Legal Translation A-B/B-A 3 cr.**

**Pre-requisites** TRD321

The course aims at introducing students to major legal documents and to the language used to write them. It also seeks to show the importance of respecting the relevant structures and terms. Students will therefore learn to tell the difference between the structure of a law, a decree, a contract, etc., and to find the appropriate equivalence in the target language. Moreover, the course aims at showing the importance of rigour, clarity and consistency in translating texts in which there is no room for vagueness or inaccuracy.

**TRD423 General Translation A-C/C-A II 3 cr.**

**Pre-requisites** TRD322

The objective of this course is to let students translate, from Arabic into English and vice versa, a wide variety of long texts that may range from technical and scientific to literary, with emphasis on cultures and civilizations. Students are also invited to do documentary research based on the notion of "translation documentation", in order to completely understand the key concepts related to any domain whatsoever.

**TRD424 Economic Translation A-B/B-A 2 cr.**

**Pre-requisites** TRD321

This course aims to introduce students to an understanding of economic reasoning and fundamental concepts and mechanisms of the economy at national and international level, in order to familiarize them with the specific terminology in this area and help them to translate specialized texts from French into Arabic and vice versa.

**TRD425 Economic Translation A-C/C-A 3 cr.**

**Pre-requisites** TRD322

The course seeks first of all to introduce students to the different economic and financial processes in order to avoid any misunderstandings that could eventually lead to incorrect translations. Secondly, it focuses on the technical and context-specific terms, idioms and collocations used in the economic discourse. A special attention will also be given to consistency, structure and finding or creating proper equivalences while translating.

**TRD428 Conference Translation A, B, C 3 cr.**

The course aims at introducing students to the translation of all documents used in international organisations, mainly the United Nations System. To this end, students need to learn how to tell the various types of documents apart, how to translate particular sentence structures used in these documents and how to use the appropriate terms and language for a translation that is consistent with the requirements of the UN.

**TRD429 Sight Translation A, B, C 3 cr.**

By learning how to translate orally a written text in the target language without previous preparation, students will develop their ability to quickly spot the main components of a sentence in order to understand the structure and the meaning behind it. Moreover, sight translation enriches students' vocabulary, stimulates their memory and general knowledge and develops their ability to rephrase the ideas as a quick solution to difficult structures and terms.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                               |              |

| The purpose of this course is to allow the students to develop a high level of skill, to translate from French into Arabic and vice versa, some long and quite difficult economic texts, relating to various topics, including oil, banks and the IMF international concepts and terminology, etc. This is in order to deal with any kind of economic text or newspaper article, and to develop a dual Arabic-French glossary.                                                                                                                                                                                                                                      |                                                               |              |
| <b>TRD520</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Economic Translation A-C/C-A II</b>                        | <b>2 cr.</b> |
| This seminar trains students to understand and translate economic texts from English into Arabic, and vice versa. The topics of the translated texts are related to current issues as viewed by journalists and scientists of economics. The level of the texts can be described as intermediate specialized. All texts require terminological and syntactic analysis.                                                                                                                                                                                                                                                                                              |                                                               |              |
| <b>TRD521</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>General Thematic Translation A-C/C-A</b>                   | <b>2 cr.</b> |
| In this course, students will have theoretical and practical classes. They will be exposed to the translation of various topics from English into Arabic and vice versa. Special emphasis will be placed on how to deal with cultural differences that constitute the main challenge to many translators, and how to use the accurate equivalence of expressions, proverbs and idioms. Students will also have the opportunity of knowing the weak forms of translations in order to avoid them when they translate. They will also learn how to keep the exact meaning of what they translate, by having a deep insight into the cultural differences.             |                                                               |              |
| <b>TRD526</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Legal Translation A-B/B-A; A-C/C-A</b>                     | <b>2 cr.</b> |
| The aim of this course is to improve students' knowledge and translation of various legal documents and legal styles, mainly through the translation of a wide variety of legal documents. Different types of contracts, acts and declarations, as well as legal texts about them, are to be translated from French into Arabic and vice versa, and from English into Arabic and vice versa. To add to the variety of styles, journalistic legal texts are also translated.                                                                                                                                                                                         |                                                               |              |
| <b>TRD527</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Seminar: Contemporary Culture and Civilization</b>         | <b>2 cr.</b> |
| As globalization brings radical changes and new cultural demands to contemporary civilization, which made the international scene witness from time to time, since the end of Cold War, what can be described as a clash of civilizations, and necessitates learning about how different language groups (English-speaking, French-speaking or Arab-speaking groups) see their own cultures, and the problematics caused by interconnecting with the global human civilization. It also requires examining what distinguishes all these multiple cultures, and their willingness to co-exist with different unilateral and multilateral cultures and civilizations. |                                                               |              |
| It is necessary to consider cultural diversity and pondering in the shattering or richness it may lead to.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                               |              |
| The research explores the position of each of the major cultures mentioned in the international civilization: their diversity, encounter, contradiction, intertwinement, variations and development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                               |              |
| One of the problematics raised in this course, is facing the tendency to encourage either more diversity or more identification and unilateralism.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                               |              |
| <b>TRD528</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Technical and Scientific Translation A-B/B-A ; A-C/C-A</b> | <b>2 cr.</b> |
| This course aims to help students become aware of the specific problems caused by scientific and technical translation in the Arab world in general, and to familiarize them with technical and scientific terms in Arabic, French and English. It also enables them to acquire a working method, enabling them to understand any technical or scientific text.                                                                                                                                                                                                                                                                                                     |                                                               |              |
| <b>TRD529</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Film Translation: Subtitling and Dubbing</b>               | <b>2 cr.</b> |
| This course aims to raise awareness, in the future translators, of the different registers of language (maintained, familiar, slang registers, etc.) made in the movies, in novels or in the works of general literature, in order to initiate translation practice. It may offer opportunities in television stations or publishing houses, and to make use of audiovisual aid and laboratory translation; and perform many translation assignments of movies, or television broadcasting, excerpts from novels, plays or work of general literature.                                                                                                              |                                                               |              |

| The aim of this course is to improve students' knowledge and translation of various oral documents styles, through the consecutive translation of a wide variety of texts. Different types of usually spoken discourses are to be translated from French into Arabic and vice versa, and from English into Arabic and vice versa.                                                                                                                                                                                                                                                                                                                                   |                                                               |              |

| This seminar trains students to understand and translate advanced economic texts from English into Arabic, and vice versa. The topics of the translated texts are related to current issues as viewed by journalists and scientists of economics. Students will be able to understand and apply terminology research principles and a methodology for creating terminology records.                                                                                                                                                                                                                                                                                 |                                                               |              |
| Students translate advanced economic texts and analyze terminological and syntactic issues.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                               |              |

| A work of about 150 pages, most of which is the translation of 50 pages of a current book, which will be an analysis of the traductology problems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                               |              |
| <b>TRD731</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Seminar: Research Methodology</b>                          | <b>3 cr.</b> |
| This seminar aims to give graduate students the means to acquire methodological skills that are essential to the development of their dissertation, according to internationally accepted standards. It aims to help them respond quickly to the questions coming from the topic they choose, to organize their work, using the information available to them, in the writing of the dissertation and to learn how to manage the defense.                                                                                                                                                                                                                           |                                                               |              |
| <b>TRD732</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Seminar: Interpretive Theory of Translation</b>            | <b>3 cr.</b> |

This seminar aims to give graduate students the opportunity to understand the dimensions of the interpretive theory, especially its triple process of understanding, deverbalization and re-expression. It also aims to help them to situate this theory among other contemporary translation theories.

**TRD733 Seminar: Pedagogical Translation 3 cr.**

This seminar aims to give graduates the opportunity to explore the different techniques of pedagogical methods of translation, especially at the University.

**TRD734 Literary Translation Seminar 3 cr.**

This seminar concerns the theoretical framework, on one hand, and practice and evaluation of the translation of French literary texts into Arabic and vice versa, on the other. It enables exchanges between students, who may be interested in the translation of literary works, and could one day become professional literary translators.

**TRD790A PhD Thesis 0 cr.**

The PhD thesis, which is about 300 pages long, is the culmination of extensive research focused on a problem of translation studies. It must be innovative and comply with international standards for the development of doctoral theses.

# School of Architecture and Design

## Overview

The School of Architecture and Design was established in 1974, under the name of Faculty of Fine and Applied Arts. Its objective is to orient young people towards a brilliant future, while its mission consists of the development of creativity and human potential. The programs offered by the School enable students to acquire a cultural education, in addition to competence that will enable them to be distinguished in their discipline. The diversity of the proposed programs promotes interactivity in multidisciplinary research workshops and provides them with a high level of dynamism. Curricula are regularly updated according to the requirements of the professional situation.

During the period of studies, students will develop analytical minds, and creative skills, as well as the ability to adapt to any change; qualities that have become unavoidable in the world of business. The School follows a development plan that combines, on the one hand, classic teaching methods with the latest technologies, and on the other hand, theory with practice. It has a cooperation network with various local and international academic institutions: exchange programs, participation in seminars and common projects.

## Mission

The School of Architecture and Design main mission is to prepare tomorrow's qualified, creative, and high-level experts, who are willing to participate in their communities' improvement and to contribute to humanities progression, using the top-level quality and intercultural education they acquire. Our faculty members implement their knowledge and proficiency to anchor in our students' spirit, leadership ability, sustainable social and environmental responsibility, as well as passion and innovation. We are also keen on arousing our students' civic responsibility, honesty, reliability and loyalty as well as their sense of commitment, openness and tolerance.

Furthermore, and since we are located in the heart of a region, known historically for its immeasurable value, we are driven to be worthy of this noble heritage by working with all our means to safeguard and protect our patrimony.

The School of Architecture and Design consists of the following departments/programs:

### Department of Architecture

- Bachelor and Master of Architecture (Combined program)
- Minor in Art and Architecture History

### Department of Interior Design

- Bachelor of Arts in Design and Applied Arts
- Minor in Interior Design
- Master in Interior Architecture

### Department of Design and Digital Media

- Bachelor of Arts in Communication and Visual Arts
- Bachelor of Arts in Digital Media
- Master of Arts in Communication and Visual Arts
- Master of Arts in Digital Media
- Master of Arts in Contemporary Art

## Administration and Full-time Faculty

Prof. Paul Abi Khattar Zgheib, Professor, **Dean**

Mr. Maroun Kosseifi, Assistant Professor, **Associate Dean**

### **Professors:**

Prof. Antoine Fichfich

Prof. Joseph Nasr

### **Associate Professors:**

Dr. Hany Kahwagi-Janho

Dr. May Farhat

Dr. Victor Takchi

### **Assistant Professors:**

Mr. Antoine Younan

Mr. Bechara Mouannes

Mrs. Darine Zakka

Mrs. Eliane Noujaim Moughabghab

Mr. Elie Abi Safi

Mr. Joseph Zaarour

Mr. Louis Hachem

Mr. Nagib Lahoud

Ms. Odile EL Khoury

Mr. Robert Karam

Mr. Zafer Sleiman

### **Lecturers:**

Mr. Jean-Claude Bassil

Mrs. Mirella Fahed

## Undergraduate Programs

### Bachelor and Master of Architecture (Combined Program) - Hybrid<sup>i</sup>

*Offered in Main Campus Kaslik (all levels), in RUC Zahle (only undergraduate level courses) and in RUC Chekka (only Sophomore and Junior level courses)*

The Master of Architecture is a combined program of undergraduate and graduate studies that requires students to earn 193 credits in order to graduate. However, students are eligible to obtain the Bachelor of Science in Architectural Studies while completing the 138 credits.

The Holy Spirit University of Kaslik, School of Architecture and Design has received the International Certification designation from the National Architectural Accrediting Board (NAAB) for the Master of Architecture Degree for a term of six years, effective 1 January 2019.

By decision of the French Minister of Culture on April 24, 2018, the Diploma of Master of Architecture awarded by USEK's School of Architecture and Design is recognized as being equivalent to the French Diploma in Architecture. This recognition, effective starting the academic year 2015-2016, was renewed on April 14, 2021, for a period of five years as of the academic year 2020-2021.

#### Mission

The mission of the Master of Architecture program is to prepare students for a profession as an architect by offering undergraduate and graduate courses that provide them with an educational experience in architectural Design, architectural history and theory, structures and materials, building technology, vernacular and regional studies, with a strong focus on heritage preservation and social and environmental responsibility.

#### Program Educational Objectives

1. The Master of Architecture program qualifies its graduates to become registered professional architects and allows them to grow into active members of different civil societal bodies through ethical and social engagements that improve the livelihood of their communities.
2. Graduates will be able to have leading professional roles as both entrepreneurs and efficient members of projects that are larger and in more complex architectural settings.
3. In addition to conceptual design, execution, site development and management, graduates will be able to employ their architectural education to adapt and evolve existing requirements by engaging in heritage preservation and restoration, scenography, building technology, urban planning, landscape and sustainable architecture, and development in a professional and ethical manner.
4. Graduates will be able to lead teams as well as be effective team members who can work and communicate effectively with diverse team members to identify and solve problems and make responsible recommendations.

#### Program Outcomes

- a. Students will be able to interact between different components (social, theoretical, cultural, and contextual) in the process of design thinking, and communicate clearly with the appropriate tools and media.
- b. Students will be able to comprehend that projects can be built both by respecting the environmental charts and by transmitting technical information.
- c. Students will be able to gather and comprehend the essential value of research within the design process, analyzing and evaluating the different options related to the predesign issues, and synthesizing the different scenarios related to different analysis in integrating architectural solutions. Solutions must respond to different environmental issues.

<sup>i</sup> Hybrid: Courses offered in French and/or English

- d. Students will be able to understand the typical career path of an architect and the means of progressing. They will recognize and preserve the valuable role of different partners and disciplines by the application of legal codes, professional responsibilities, and ethical values.

#### Degree Requirements

This program requires 193 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |           |
|-------------------------------------------------------------|-----------|
| <b>General Studies - Undergraduate</b>                      | <b>36</b> |
| General Education - Civic Engagement                        | 2         |
| General Education - English and French Communication        | 6         |
| General Education - Behavioral, Social Sciences and History | 3         |
| General Education - Science and Health                      | 6         |
| General Education - Sports                                  | 1         |
| General Education - Religious Sciences                      | 3         |

## Bachelor of Arts in Communication and Visual Arts (English)

### Mission

Due to the evolution of today's technology, Communication and Visual Arts program allow the students to know that there is interdependence between Advertising, Branding, Corporate Design and technology fields. Since we are connected to the world around us like never before, the students will explore the use of Above the Line (ATL) and Below the Line (BTL), social media and sites as platforms to promote effectively any brand, in a very competitive and challenging environment, investigating recent methods, expending their eagerness to find creative and useful solutions in the future.

### Program Educational Objectives

1. To learn how to use creativity to visualize, design and print and TV commercials by using Typography, Photography, Animation, Editing and Printing, in an artistic and aesthetical environment.
2. To learn how to create solutions in a nonstop changing digital environment, to improve competitiveness, and to deal with the upcoming innovations.
3. Graduates will practice identifying the real needs of the market, either by developing and implementing new ideas, by creating startups, studios, production houses, agencies, etc. and/or by collaborating with already existing firms.

### Program Outcomes

- a. Applying industry knowledge and aesthetic and/or practical design to create, develop and implement effective visual communication solutions that meet professional standards.
- b. Developing design thinking, ideation, and copywriting.
- c. Using Technology and proficiency in production
- d. Learning critical thinking, presentation skills, promoting projects and business ethics.

### Degree Requirements

This program requires 108 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |           |
|-------------------------------------------------------------|-----------|
| <b>General Education</b>                                    | <b>30</b> |
| General Education - Arts and Humanities                     | 3         |
| General Education - Behavioral, Social Sciences and History | 6         |
| General Education - Civic Engagement                        | 2         |
| General Education - English Communication                   | 3         |
| General Education - Quantitative Reasoning                  | 3         |
| General Education - Science and Health                      | 6         |
| General Education - Sports                                  | 1         |
| General Education - Religious Sciences                      | 3         |
| DAA241 - General History of Art                             | 3         |

## Bachelor of Arts in Design and Applied Arts (Hybrid<sup>i</sup>)

*Offered in Main Campus Kaslik and in RUCs Zahle and Chekka*

### Mission

The mission of the Bachelor of Arts in Design and Applied Arts is to set up an educational and creative environment that rigorously prepares students for their professional career while providing them with the necessary data to meet the needs of the society and be responsive to the project sponsor, taking into account his/her needs and wishes. This mission will be accomplished through a program that offers both theoretical and professional courses.

The interior designer's mission is to restructure a space, design a project, monitor the work site until reception and manage the various stakeholders (companies, craftsmen, etc.), while taking into consideration the budget, technical constraints and compliance to the applicable standards.

The interior architect designs and implements domestic spaces while considering the aesthetic and functional issues through spatial factors such as the material, furniture, form, colors and light.

### Program Educational Objectives

1. Graduates will be able to administer various tools and basic know-how in the field of project design (drawings, freehand sketches, plans, perspective, models, etc.) as well as mastering different digital software (Autocad, Photoshop, IDesign).
2. Graduates will be able to develop the diversity of connections between inhabitants and their environment, built by acquiring theoretical, historical and cultural landmarks for a good understanding of the evolution of architecture and design and by the acquisition of plastic and technical tools (expression, drawing, representation, materials, technology and construction system).
3. Graduates will master a meticulous methodology in the design of an interior architecture project; in order to apply this methodology in directed works/tutorials, the proposed projects will show a variety in terms of themes, functions and scale.

### Program Outcomes

- a. Acquire a vocabulary and a background in plastics through an artistic and technical expression to target a reflexive study of the morphostructure and the spatial composition.
- b. Experiment with several graphic tools in order to develop the ability to draw the world and the images that surround us on one hand (space drawings and objects in space) and present the stakes of the technical representation and the conventions of drawing (descriptive geometry, sketches, standardization) on the other hand.
- c. Observe, analyze, represent and diagnose existing spaces, with regard to the notion of the program, the site, the client and the context.
- d. Master the communication and the layout of the project through an oral approach, a graphic and visual concept.
- e. Be able to operate digital tools in their diversities and professional specificities.
- f. Be able to keep up with the technological development through new materials and constructive systems in regard to the usage of spatial situations.
- g. Examine the technical and economic constraints and challenges of the implementation and the management of the project.
- h. Acquire knowledge specific to historical and cultural development about space and objects and master conceptual theoretical and aesthetic aspects, by articulating a set of issues linked to the notion of inhabiting and by dealing with the multiple existing interactions. Master the treatment of atmospheres, materials, and the choice of furniture.
- i. Create a preliminary work plan about a thematic and a research object, which will allow the student to identify, analyze, and develop his subject and select his keywords. Learn how to choose sources to consult and carry out surveys on relevant samples in the field of architecture and design.
- j. Discover the business through a professional internship.

---

<sup>i</sup> Hybrid: Courses offered in French and/or English

### Degree Requirements

This program requires 108 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                             |                    |
|-------------------------------------------------------------|--------------------|

## Bachelor of Arts in Digital Media (English)

### Mission

The Digital media program allows the students to learn how to find creative solutions in the fields related to web, 2D and 3 animations; the students will learn as well to use social media techniques and sites as platforms along with smartphones and streaming videos to connect to the professional circle and to use these digital tools to show how strong is the impact of design and technology in reshaping our presence and their eagerness to find creative and useful solutions in the future.

### Program Educational Objectives

1. To learn how to use the newest digital techniques to visualize, design and promote websites, mobile apps and advertisement by using Typography, Photography, Video Editing and Animation programs, in an artistic and aesthetical environment.
2. To learn how to be innovative and creative efficiently in the digital ecosystem, and to deal with specific briefs and to progress effectively semester after semester.
3. To learn how to recognize the signals sent by the real needs of the milieu to tailor-made creative solutions designed accordingly.

### Program Outcomes

- a. Students will operate in a multitasking industry where they must innovate and apply efficient digital and numerical solutions guided by their know-how.
- b. Students will be able to create bridges between the database, design and up-to-date deliverables, and to learn how to guide the final results according to a comprehensive marketing plan.
- c. Students will master a wide range of computer graphics and animation platforms.
- d. The students should be able to express their vision and to promote themselves confidently and ethically.

### Degree Requirements

This program requires 108 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                         |           |
|-----------------------------------------|-----------|
| <b>General Education</b>                | <b>30</b> |
| General Education - Arts and Humanities | 3         |

|                                                    |                    |
|----------------------------------------------------|--------------------|
| General Education - Behavioral and Social Sciences | 3                  |
| General Education - Civic Engagement               | 2                  |
| General Education - English Communication          | 3                  |
| General Education - History of Lebanon             | 3                  |
| General Education - Quantitative Reasoning         | 3                  |
| General Education - Science and Health             | 6                  |
| General Education - Sports                         | 1                  |
| General Education - Religious Sciences             | 3                  |
| DAA241 - General History of Art                    | 3                  |
| <b>Common Core</b>                                 | <b>30</b>          |
| CVA200 - Fundamentals of Typography                | 3                  |
| CVA205 - Design Foundations                        | 3                  |
| CVA210 - Fundamental of Computer Graphics          | 3                  |
| CVA215 - Advanced Computer Graphics                | 3                  |
| CVA220 - Drawing for Animation and Sketching       | 3                  |
| CVA225 - Introduction to 2D Animation              | 3                  |
| CVA230 - Introduction to Digital Media             | 3                  |
| CVA300 - Computer 3D Modeling                      | 3                  |
| PHO225 - Advanced Black and White Photography      | 3                  |
| TLV351 - Introduction to Editing                   | 3                  |
| <b>Specialization</b>                              | <b>33</b>          |
| DIM210 - User Centric Design                       | 3                  |
| AUV240 - Fundamentals of Interaction Design        | 3                  |
| DIM225 - Character & Object Design for Animation   | 3                  |
| PHO320 - Color Photography                         | 3                  |
| DIM230 - Advanced 2D Animation                     | 3                  |
| AUV438 - Digital Video                             | 3                  |
| AUV431 - Introduction to Sound                     | 3                  |
| DIM315 - Mobile User Interface                     | 3                  |

## Academic Minors

### Minor in Art and Architecture History (Hybrid<sup>i</sup>)

#### Mission

The mission of the minor in art and architecture history is to give students an introduction to the architecture profession by offering undergraduate courses that provide them with a preliminary education in architectural culture.

#### Program Educational Objectives

1. The minor in art and architecture history qualifies its students to become familiar with architectural tools.
2. Students will be able to communicate and coordinate with architectural firms and professional engineers.
3. The program gives its students an understanding of heritage preservation, archeology and contemporary architectural projects.

#### Program Outcomes

- a. Students will be able to enlarge their architectural knowledge by understanding the social and environmental impacts of an architectural project.
- b. Students will be able to interact with all the professional sectors that take part in architectural projects.
- c. Students will become knowledgeable about the intricacies of Lebanese heritage buildings, sacred monasteries and churches, and archeological sites.
- d. Students will be able to understand the history of architecture and its evolution through the ages.

#### Minor Requirements

|                                                  |   |
|--------------------------------------------------|---|
| ARCH310 - History and Culture of Architecture I  | 3 |
| ARCH375 - History and Culture of Architecture II | 3 |
| ARCH484 - Landscape Architecture                 | 3 |
| ARCH486 - Architectural Heritage Buildings       | 3 |
| ARCH487 - Intercultural Workshop Studies         | 3 |

<sup>i</sup> Hybrid: Courses offered in French and/or English

|                                             |           |
|---------------------------------------------|-----------|
| ARS430 - Traditional Religious Architecture | 3         |
| <b>Total</b>                                | <b>18</b> |

## Minor in Interior Design (Hybrid<sup>i</sup>)

### Mission

The mission of the program is to set up an educational and creative environment while considering the esthetic and artistic issues through spatial factors such as the material, furniture, form, color and light.

### Program Educational Objectives

1. Developing creativity in a plastic dimension and practicing skills in the fields of textiles, design, materials and surfaces, linking the specialization's different materials (drawing, free hand sketching, plan, perspective, color, and model).
2. The acquisition of historical and cultural benchmarks for a good understanding of the evolution of design. This approach will be chronological and thematic.
3. Developing an experience of sensitivity and reflection through the discovery of exploration tools and several sources of creativity.

### Program Outcomes

- a. Interpret a vocabulary and a background in plastics through an artistic and technical expression to target a reflexive study of the morpho structure and the spatial composition.
- b. Experiment with several graphic tools to develop the ability to draw the world and the images that surround us (space drawings and objects in space).
- c. Master the treatment of atmospheres, materials, and the choice of furniture, by articulating a set of issues linked to the notion of inhabiting and by dealing with the multiple existing interactions.
- d. Acquire knowledge specific to historical and cultural development with regard to space and objects.

### Minor Requirements

|                                                      |           |
|------------------------------------------------------|-----------|
| ARCH205 - Basic Design I                             | 2         |
| ARCH215 - 2-3D Representation Skills                 | 2         |
| ARS213 - Material, Color, Light                      | 2         |
| DAA211 - Sketching and Drawing I                     | 2         |
| DAA212 - Sketching and Drawing II                    | 2         |
| DAA216 - Plastic Expressions                         | 2         |
| DAA260 - History and Culture of Furniture and Design | 2         |
| DAA431 - Textiles                                    | 2         |
| DAA453 - Design Studio I                             | 2         |
| <b>Total</b>                                         | <b>18</b> |

## Graduate Programs

### Master of Arts in Communication and Visual Arts (English)

#### Mission

The mission of this Master is to provide multidisciplinary training that begins with the study and collection of data and its analysis, the market, the creative process, the realization of Graphic Design and Advertising campaigns, to analyze practical, social, financial, and cultural constraints for the purposes of coming up with the most compatible and cost-efficient solutions to the graphic, advertising, and conceptual problem at hand. Online, print, BTL, and ATL, installation art and video are aimed at as media to best showcase the artistic and esthetic solutions proposed.

#### Program Educational Objectives

<sup>i</sup> Hybrid: Courses offered in French and/or English

1. Learn the history of graphics and advertising, the rise of social media and the importance that design plays in the branding sector, providing the students with conceptual, historical, and cultural landmarks.
2. Interpret abstract imagining concepts based on visual research and psychological/sociological fields. Understand how graphic, copywriting and/or the image works in the real-life situations and vary across cultures and contexts.
3. Demonstrate the ability to integrate and realize a design idea in several types of social media and in an increasingly multicultural world. The role of the global economy is considering all the factors in countries with different cultures while assessing semiotics and signifiers in the implementation.

#### Program Outcomes

- a. Being able to use a series of manuals and tools, on both intellectual and technical levels, to make creative, relevant, socially compatible design executions.
- b. Formulate and apply concepts in the professional field of advertising and graphic design through an adequate visual expression used in professional and social media online and in print.
- c. Learn to analytically criticize their concept and that of others without prejudice and prior bias.
- d. Show an understanding of the field of design: Above the Line and Below the Line (ATL and BTL) and the related fields of artistic professions and gain enough knowledge to avoid duplicating previous concepts/executions.

#### Degree Requirements

## Master of Arts in Contemporary Art (Hybrid<sup>i</sup>)

### Mission

The Interdisciplinary Master's program is a general education in Art that tackles different artistic disciplines and develops the critical reflection that allows the student to achieve his theoretical and analytical skills.

This Master establishes the link between art and various disciplines such as communication, philosophy, literature, anthropology, history, and semiotics, while encouraging the reflection around the methods of thought. A director follows the general progress of the research thesis.

### Program Educational Objectives

1. Acquire theoretical knowledge related to a multidisciplinary and a transversality, allowing the student to develop personal research on a specific topic.
2. Acquire a high-level methodological and theoretical knowledge of contemporary art and its practices through an articulation between history, theory, and criticism.
3. Develop an approach of reflection and conceptualization in the field of contemporary art, reflecting an aesthetic conception open to all the worlds of the arts.
4. Participate in seminars and debates on the strategic issues of contemporary art, setting up exchanges with international universities and promoting teacher and student mobility.
5. Pursue the research on a doctoral level.

### Program Outcomes

- a. Strengthen the mastery of scientific fields in the world of Contemporary Arts through theoretical tools and methodological means of research.
- b. Refine the capacity of synthesis and theoretical criticism of contemporary art and its aesthetic approaches.
- c. Formulate a problematic in regard to the multidisciplinary and interdisciplinary fields of Design (Medias, photography, objects, cinema ...)
- d. Analyze and problematize the different aspects of cultural mediation in relation to social practices.
- e. Evaluate the notions relating to the spatial dimension in a social criticism form, following an experimental research and a sociological, urbanistic, and architectural approach.
- f. Formalize a thought and rationalize a practice of conception by drafting a research paper written in interface with literary, poetic, anthropological, philosophical, and social references.

## Master in Interior Architecture (Hybrid<sup>i</sup>)

Offered in Main Campus Kaslik and in RUC Zahle

### Mission

The mission of the Master in Interior Architecture is to prepare students to enter the field as skilled designers, creative thinkers, professional leaders and responsible citizens. The Department seeks to cultivate students who acknowledge their responsibilities to the safety and wellbeing of the public and the environment and who can lead a multifaceted professional life. The syllabus integrates knowledge and appreciation of architectural and design theory with ethical, responsible, and entrepreneurial practice.

### Program Educational Objectives

1. Graduates will be able to master the creative design of and plan the management of a project.
2. They will be able to support a project with an expertise based on innovation and multidisciplinary.
3. They will be able to work in teams to achieve large scale projects in partnership with specialized professionals and professional firms.
4. Synthesize knowledge and express a form of singularity that will allow the student to develop a free subject through a problematic anchored in the theoretical, social, and practical world.

### Program Outcomes

- a. Students will be able to create layout and design projects, related to domestic, cultural, and professional behavior of the human being.
- b. Students will be able to address the design methodology and the representation of the project through their own perceptions.
- c. Students will be able to analyze research documentation and produce a proper summary to communicate and argue a solution within the framework of the project.
- d. Students will be able to set up a professional project which gives them the opportunity to be in contact with the professional reality, their integration into working life in the future and integration into multidisciplinary teams.
- e. Master and experiment the conceptual and technical aspects in the world of scenography (heritage, urban and industrial design, study and event creation, landscape environment).

| <b>ADI520</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Design Modeling in 3D</b>                                    | <b>3 cr.</b> |
| The course introduces the students to the world of virtual reality and simulation and mainly those of architectural spaces, objects, their geometric components, materials and virtual lighting. Walks and animation in real time allow students to monitor the implementation and impact of the project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                 |              |

| This course aims at developing a reflection and a critique of contemporary art in a social, historical, theoretical and architectural dimension, taking into account societal transformations: digital media, photography, theater, architecture, moving images. The student will pursue a critical approach based on research, readings, discourses, museums visits and works descriptions. The course will not be conceived from an exclusively historical perspective but also as a process of de-compartmentalization of disciplines and a necessary prerequisite for a theoretical deepening of a critical posture with regard to the contemporary era. Through the analysis of contemporary artworks, we will address various artistic movements and practices that have marked the history of contemporary art in the West, but also in the Middle East: video art, body art, Performance, feminist artists, engaged art.                                                                                                                                                                    |                                                                 |              |

| This course will address the technical, economic, social, theoretical and aesthetic aspects of the developed projects, exploring a multiplicity of methodological approaches. The treatment of atmospheres and materials, and the choice of furniture, are spatial parameters that will allow us to reflect on the identity and character of a built space in terms of aesthetics and functionality. The two themes to be developed are: Housing and collective housing. Office space.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                 |              |
| <b>ADI580</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Thematic Interior Design Studio II</b>                       | <b>4 cr.</b> |
| <b>Prerequisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | ADI570 or DES570                                                |              |
| Raising the student's awareness about the heritage approach is necessary for the graduate studies level (Master); he must identify the elements on which he will rely in order to construct a problematic that is relevant to the place and the chosen thematic in a theoretical, cultural, historical and environmental dimension. The follow-up of the project focuses on a specific problem in interior design in the framework of a classified building that is known for its heritage value in different sites in Lebanon. The two themes to be developed are: museography and scenography. Heritage renovation and reconversion (leisure and cultural space).                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                 |              |
| <b>ADI600</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Final Project Thesis</b>                                     | <b>3 cr.</b> |
| <b>Prerequisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | ADI540                                                          |              |
| The diploma dissertation/thesis is a personal work that is a prerequisite for the final project; it consists of a memorandum drafted for the development of an architectural project. Based on the hypothesis studied and confronted by the student in the Research Methodology course, the student must try to measure variables in the context of an experimental procedure in order to reveal a dynamic approach to an interior design project, called an "architectural conceptualization". This approach requires the argumentation of an adequate procedure to the culmination of an interior design project linked to intersect between theory and practice.                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                 |              |
| <b>ADI605</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Preliminary Interior Design Studio</b>                       | <b>4 cr.</b> |

| The theme and subject of the final project are freely chosen by the student during his diploma dissertation, and are developed in the form of a conceptual phase during the Preliminary Project Studio course. Also, the Final Project Studio consists of developing the conceptual idea into a complete project based on theoretical, functional, technical, methodical and artistic factors. The culture of this long project will also allow the student to finalize and present his final written dissertation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                 |              |
| <b>ADI620</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Heritage Architecture and Identity</b>                       | <b>2 cr.</b> |
| The course presents specific architectural case studies of heritage nature in different sites in Lebanon. The constructed building must be the object of an observation, as well as an object of a historical and analytical study, both done by the student during the visits of the place. Raising the student's awareness towards a heritage approach is crucial for the graduate studies, as he must identify the elements on which he will rely in order to construct a problematic that is relevant to the place and the theme chosen in a theoretical, cultural, historical and environmental dimension. The aim of this course is to bring students to valorize the heritage buildings via site visits and a theoretical and practical framework, by addressing the problem of restoration through concrete analysis and case study. Basic research methods such as architectural analysis of buildings and typological and comparative analysis will be implemented. Interdisciplinary approaches will be proposed, including the history of architecture, art history, archeology, etc.). |                                                                 |              |
| <b>ADI625</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Professional Internship</b>                                  | <b>1 cr.</b> |
| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | ADI580                                                          |              |
| Since each project is unique, the interior architect must know how to listen to his client in order to understand his personality, his needs and his expectations, and thus be able to transcribe them in a project. The interior architect is held to certain strictness given that he has to meet both the needs of his client and the existing standards and technical constraints. The internship is an essential stage of the training course. It allows the student to become familiar with the professional world and to apply his knowledge and awareness. But also the internship allows to validate, and to specify the project of end of studies of the Master degree. The aim of this course is to understand the diversity of professional practices in architecture and to focus on meetings with craftsmen, a skilled workforce and the various components of a large profession. This second mandatory internship must focus on the technical and scientific aspects of a project in the implementation phase.                                                                      |                                                                 |              |
| <b>ADI650</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Descriptive/Coordination and Follow up of Building Sites</b> | <b>3 cr.</b> |
| A comprehensive description by trades accompanies tender documents allowing for quicker acquisition of anticipated prices. This covers: tenders, comparative analysis, the creation of a preliminary schedule of work, coordination and monitoring of projects, the organization of meetings (as                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                 |              |

requested by the client and/or companies), informing clients and creating business reports related to specific sites, followed by delivery of the site to the client and the community. It consists of informing the student about the project management skills and tools and documents available focusing on managing quality, costs and time all within international contract and conditions of contract forms (FIDIC)

**ADI654 Environment Planning and Landscape Design 3 cr.**

This course is related to components of landscaping. It is organized around three themes: the concept of the ecosystem, history of gardens and the organization of circulation.

**ADI656 Approaches: Quality/Creation/Innovation 3 cr.**

In graduate studies (Master), the student must be confronted with several strategies related to the operation of the company, such as the materials technology, the technological innovations of construction and the ecological implications. The impact of innovation in the world of interior design profoundly influences our contemporary transformations and our new way of living.

**AGP251 Painting 2 cr.**

Introductory workshop for painting and aesthetic perception principles. It is a series of exercises on different painting techniques, mixtures, contrast, color schemes, as well as colors, shades, intensity and harmony, from still life, photos or reproduction of works.

**AGP410 Infographic 2 cr.**

**Prerequisites** ARC222, ARC322, ARCH315

In this course, the students will learn to manipulate images on software to be applied in architecture and to implement them in the real world of urban and/or rural spaces.

**AGP503 Online Advertising 3 cr.**

The advertising industry has experienced significant transformations in recent years as digital, social media and interactivity have changed the shape of media and advertising. This course will explore the effects and impact of digital media in advertising, how to understand users, and explore different modes of delivery for advertising and methods of audience measurement within an online, mobile and social media environment.

**AGP510 Graphic Design and Advertising Thesis 3 cr.**

Writing a thesis is essential for academic development and fulfillment. It is inconceivable that students would graduate without having written a solid, extensive, and very critical academic work which would be compliant with international standards. The result of the course will be a long paper on a topic related to their graduation field which would discuss a new angle for an established topic.

**AGP601 New Media 3 cr.**

The course will explore the implications of new media on culture, business and other major industries. The esthetic possibilities for a society invaded by social media, smart phones, video and digital cameras, computer interfaces, search engines, and video games will be analyzed and their convergence/divergence from 'traditional' media. Through discussion, reading, screenings, and creative experiments, we will critically reflect on everyday new media practices, such as surfing, sharing, uploading, emerging technologies, and their historical origins to understand changing relations of the human-computer interaction (HCI).

**ARC222 CAD I (Computer Aided Architectural Design) 2 cr.**

**Prerequisites** ARC210 Or ARCH210

Design and develop 2D and 3D architectural drawings using standard CAD software and in accordance with industry standards, used widely in industry.

**ARC322 CAD II (Computer Aided Architectural Design) 2 cr.**

**Prerequisites** ARC222 Or ARCH315

Virtual reality in architecture is a focus for architecture students who wish to improve modelling in the 3rd dimension, in order to increase possibilities and variation in their designs, ranging from orthogonal shapes to complex organic forms and rendering in high quality engines.

**ARCH205 Basic Design I 2 cr.**

**Prerequisites** FRN140 &/or ENG140

Students will enhance and elaborate their knowledge of applied structure, through this course covering introductory concepts of forms and abstract compositions as applied to organization, proportions, equilibrium, rhythm, and density.

**ARCH210 Technical Drawing 2 cr.**

Initiate the students to develop architecture drawings, according to international standards and norms.

**ARCH215 2-3D Representation Skills 2 cr.**

Students will learn and apply geometric representation in 2D and 3D, while comprehending theories and laws of construction from a scientific perspective as applied to the practical international standards and norms.

**ARCH220 Vernacular Architecture 4 cr.**

Initiate the student to understand the constraints that are the basis of any architecture. This teaching is based on the study of the dwelling since its vernacular origin until nowadays. The Human-Nature-Technology relationships are exposed to highlight the logic behind the design of the habitat.

**ARCH225 Basic Design II 2 cr.**

**Prerequisites** ARCH205 Or ARC205

Analyze and deduce logically the abstract notion of orders and structures while applying it in 2D and 3D formats with chromatic variations.

**ARCH230 Architecture Analysis and Perception 4 cr.**

**Prerequisites** ARC212 Or ARCH220 Or ARC208 Or DAA208

This course will initiate students to understand the built environment, the culture and the awareness towards the architectural space. Research and experimentation will develop their aptitude, including the use of architectural jargon.

**ARCH235 Strength of Materials I 3 cr.**

Study the physics of static forms and the components of solid objects in order to be applied to the strength resistance of materials. This course will familiarize students with problems in equilibrium of forces, and how the cumulative forces are transmitted to the ground in static constructions. Practical tools and utilities are provided and experimented through real case examples.

**ARCH310 History and Culture of Architecture I 3 cr.**

**Prerequisites** DAA241 Or ARI241 Or DAA208

This course aims to introduce the critical thinking of theories of architecture from Antiquity to the Renaissance in an historical chronological order. An illustrated analysis, according to a chronological order, presents the design process, the structural system, and aesthetic aspects of each period through its major achievement.

**ARCH315 CAAD 2 cr.**

|                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                   |              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|--------------|
| <b>Prerequisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                      | ARCH210 Or ARC210                                 |              |
| Introduce and familiarize the students with up-to-date software for producing architecture drawings and to construct 3D digital models.                                                                                                                                                                                                                                                                                                   |                                                   |              |
| <b>ARCH416</b>                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Structural Design</b>                          | <b>2 cr.</b> |
| The aims of this course is to study the various design factors involved in the choice of structural systems, the relation between materials and their different structural typologies.                                                                                                                                                                                                                                                    |                                                   |              |
| Through the analysis of real examples, the students will be able to evaluate and validate the correct choice of a structural system for a given architectural project.                                                                                                                                                                                                                                                                    |                                                   |              |
| <b>ARCH325</b>                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Virtual Reality in Architecture</b>            | <b>2 cr.</b> |
| <b>Prerequisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                      | ARCH315 Or (ARC222 And ARC322)                    |              |
| Principles of virtual reality and architectural simulation will be introduced in the course, while emphasizing its geometrical parameters, materials and virtual lighting. Real-time animation allows the students to implement and impact the project within the built architectural environment. Special attention will be given to the conception forms and transformations and their impact on the conception of formal architecture. |                                                   |              |

| This course aims to introduce the critical thinking of theories of architecture starting with the Industrial Revolution in an historical chronological order, in addition to providing knowledge of chronological events, architectural movements and linking them within the historical and political contexts.                                                                                                                          |                                                   |              |
| <b>ARCH420</b>                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Sanitary and Mechanical Equipments</b>         | <b>2 cr.</b> |
| This course aims to present to architecture students a theoretical and practical overview of the various mechanical systems (sanitary and HVAC) so they can be reflected in their work facilitating any necessary coordination in the design and implementation projects.                                                                                                                                                                 |                                                   |              |

The workshop consists of short exercises at advanced level which enable the students to develop conceptual thinking and sketching.

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |              |

|                      | The course will familiarize students with urban planning of territory and zoning, and applying it to urban spaces. Students will be shown real-life situations and will be placed with local authorities, where they will learn how to best work within the real constraints, as well as being exposed to global views of the issue.                                                                                                                                     |              |

|                      | At the end of undergraduate studies in architecture, ARCH 490 is a comprehensive synthesis of a four-year curriculum. This course is of major importance, as it constitutes a test of the theoretical and practical knowledge acquired by the students throughout the four years they have spent studying architecture.                                                                                                                                                  |              |
| <b>ARCH505</b>       | <b>Architecture Research Methodology</b>                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>3 cr.</b> |
|                      | The course seeks to give the students the ability to choose, among the different research methods applied to architecture, to deepen a thematic for their architecture diploma.                                                                                                                                                                                                                                                                                          |              |
|                      | Regular individual presentations will enhance their verbal communication and their writing skills.                                                                                                                                                                                                                                                                                                                                                                       |              |
| <b>ARCH510</b>       | <b>Theory and Critic of Contemporary Architecture</b>                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>3 cr.</b> |
|                      | The course enhance students to conceptual thinking and covers the critical study of the theories of architecture and international styles.                                                                                                                                                                                                                                                                                                                               |              |
| <b>ARCH515</b>       | <b>Complex Buildings Structural Systems</b>                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>3 cr.</b> |
|                      | This course improves the knowledge of students in the area of complex frames within the realm of the conception and execution of a building.                                                                                                                                                                                                                                                                                                                             |              |
|                      | Advanced Building structure, such as high rise, long spans and exoskeleton and their impact on design process will be deepened in the course.                                                                                                                                                                                                                                                                                                                            |              |
| <b>ARCH520</b>       | <b>Intelligent Buildings</b>                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>3 cr.</b> |
|                      | The aim of this course is to introduce students to automation and implementation of intelligent systems within the domain of architecture building and services.                                                                                                                                                                                                                                                                                                         |              |
| <b>ARCH530</b>       | <b>Architecture Detailing</b>                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>3 cr.</b> |
|                      | This course aims to develop the critical and rational thinking of students within the framework of architecture by applying them to details within the built project, mainly different building envelopes, intelligent and environmental skins.                                                                                                                                                                                                                          |              |
| <b>ARCH535</b>       | <b>Working Documents for Project Management</b>                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>3 cr.</b> |
|                      | The course introduces students to all legal and technical documents needed, from blueprints to contracts and legal papers, office management and workshop organization, with a focus on financial issues for design and project management.                                                                                                                                                                                                                              |              |
| <b>ARCH540</b>       | <b>Graduation Project Thesis</b>                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>3 cr.</b> |
| <b>Prerequisites</b> | ARCH 505                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |              |
|                      | As a prerequisite to the final-year project and the continuation for the research methodology course, the graduation project thesis is a personal work consisting of a master's thesis written to develop the student's point of view for his architectural project. Students will seek to measure variables in keeping with an experimental process to expose a dynamic approach to an architectural project, what is referred to as "architectural conceptualization." |              |
|                      | This approach calls for debating an appropriate process, resulting in an architecture project linked to questions at a crossroads between theory and practice.                                                                                                                                                                                                                                                                                                           |              |
|                      | Also, students are offered a leadership seminar which initiates them to the soft skills needed in addition to the hard skills acquired in the curriculum to be able to work collaboratively in their design and construction projects.                                                                                                                                                                                                                                   |              |
| <b>ARCH545</b>       | <b>Professional Internship</b>                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>1 cr.</b> |
|                      | The purpose of professional internship is to gain experience and knowledge by being involved with the activities of professionals, in architectural firms as well as on site, within all engineering disciplines.                                                                                                                                                                                                                                                        |              |

Students are initiated to the rules of registration, legal practice and site management through a seminar offered in the Order of Engineers and Architects of Beirut.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                         |              |

| Humankind, built spaces and environmental issues are some of the concepts and interactions explored within this course that aims to give a balanced view of the students to their surroundings. Experts in the field are regularly invited to participate in the workshop to enhance the students awareness towards Environmental and Sustainability issues.                                                                                                                                                                                                 |                                                         |              |
| <b>ARCH630</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Built Heritage Workshop</b>                          | <b>3 cr.</b> |
| This workshop aims to meet a certain need: the adoption of a coherent policy and an effective approach in the field of built heritage. The overall spirit of the workshop is to give a strengthened meaning to identity in the work of students and to reduce any anxiety about cultural uniformity.                                                                                                                                                                                                                                                         |                                                         |              |

| Is architecture a kind of philosophy? How would the architect and the philosopher approach the space of architecture? Philosophy falls within the framework of construction and occupies an essential place in architecture, its purpose being to know, it is related to the logos, the word and the speech, while the purpose of architecture, its being to construct, its philosophy is related to the building. The philosophical analysis is therefore understood as an objective genitive: what philosophy and philosophers tell us about architecture. |                                                         |              |
| <b>ARCH645</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Intercultural Architecture</b>                       | <b>3 cr.</b> |
| The course aims at widening the students' knowledge and understanding of how to build within parameters specific to the community and culture, including ethical and social values and norms, so that the project will thrive and take shape.                                                                                                                                                                                                                                                                                                                |                                                         |              |

| With the advance of technology, hardware and software have become very powerful tools in the hands of designers, opening doors to higher levels of animations be it 2D or 3D. From opening sequences to film titles, to advertising, to music videos, to internet and different formats of online animations, movement found its way not only into images and shapes but into typography as well, transforming the otherwise printed, flat and static letter forms into a living being that mutates, morphs, float, and explodes.                            |                                                         |              |
| <b>ARG505</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Exhibition Display</b>                               | <b>3 cr.</b> |
| In this course the students will learn how to conceive a space exhibition for artists' work, for writers, private collections, etc. They will also learn how to define a workspace to prepare a retrospective exhibition for a civilization, to know how to combine graphics and space, themes and communication, and all the necessary elements.                                                                                                                                                                                                            |                                                         |              |
| <b>ARG506</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Mobile Application Design</b>                        | <b>4 cr.</b> |
| With mobile apps revolutionizing the way we surf the internet and how and where information is received, this course will enable students to acquire the skills to build clean and attractive UI designs. Focusing on the design side of mobile applications, students will go through information that will assist them during the initial process in understanding developmental requirements and specifications.                                                                                                                                          |                                                         |              |

| This course is designed to introduce students to the art of illustration. Sharing the tools and techniques of gallery artists and the communicative goals of graphic designers, illustrators work across media to make concepts understandable and powerful in the service of editorial, informational, political or persuasive goals.                                                                                                                                                                                                                                                                           |                                                        |              |
| <b>ARG610</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Museography</b>                                     | <b>3 cr.</b> |
| Through videos, slides, films and guided visits, the students will have a clear vision and will learn the history of museums, their conception, their evolution and how they can protect and save the human heritage. In a world where heritage, archiving and collective memory is mutating constantly, students learn about the presence of fixed parameters to record signifiers and ways of transmission.                                                                                                                                                                                                    |                                                        |              |
| <b>ARG611</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Advanced Animation</b>                              | <b>3 cr.</b> |
| Students will be initiated into more complex techniques of animation with After Effects as their main tool, to create and deliver complete and advanced animation packages within time and budget constraints and according to specific themes and commissions.                                                                                                                                                                                                                                                                                                                                                  |                                                        |              |

| A practical printmaking class where students will learn the entire process of silkscreen from stretching the screen to making a book. They will draw on their own creativity to discover new printmaking ideas. They can experiment with their own imagery, whether illustrative, type or photographic. Different techniques of the silkscreen process will be discussed. How students solve problems and deal with selecting the right separations will be an integral part of the course. Their ability to modify, collect and solve will be enhanced. The use of color and connections will also be stressed. |                                                        |              |

| <b>AUV510</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Theory and Technics of Animation</b>                     | <b>3 cr.</b> |
| This course provides on implication to the creation of animation through classical animation techniques. Students will explore the art of creating convincing movement through effective timing, spacing, and drawing. Works of master animators will be screened and analyzed frame-by frame to illustrate the principles covered in class, and students will put their knowledge to work through a series of exercises. The goal of both this course and its sequel is to introduce methods by which animators “act” and bring characters to life through sequential images.                                                                                          |                                                             |              |
| <b>AUV531</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Advanced 2D Animation</b>                                | <b>3 cr.</b> |
| This is a traditional animation course within the context of a small production pipeline. Students will be responsible for interpreting the initial animatic, storyboards, and workbooks, breaking down sound and music onto exposure sheets, and completing rough and cleaned up animations for a final rough composite. This will require each cohort to learn choreography, continuity, and basic scene analysis, all while working within the confines of a team. New dynamics will come into play, particularly in terms of accountability to small and large groups, as well as increase responsibilities with man-hour projections and general scene management. |                                                             |              |
| <b>AUV533</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Advanced 3D Animation</b>                                | <b>3 cr.</b> |
| This course will focus on the design and production of highly detailed models for use in feature and broadcast animation. Students will use a best-of-breed approach to define their tool set, with particular emphasis placed on organization and structure. Additional emphasis will be placed on generating layered digital intermediate files for use in a model-composite workflow in a desktop production environment. Students will also explore advanced material creation using a global illumination-capable rendering engine, incorporating advanced texture creation techniques.                                                                            |                                                             |              |

| This course covers in depth three categories of objects, characters, vehicles, and environment. Students will learn the process of creating, texturing, rigging and animating a character. They will learn how futuristic cars are built in CG movies and how to make them look so real. And finally, they will create eye-catching scenery to shoot a 15 seconds movie featuring all the elements they have created in the course.                                                                                                                                                                                                                                     |                                                             |              |

| This course will expose students to the principles of 3D environment design: theatrical sets, architectural simulations, and level design will be considered.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                             |              |
| <b>AVC204</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Introduction to Contemporary Cinema</b>                  | <b>3 cr.</b> |
| The student is introduced to contemporary films and how films reflect and contribute to the values and culture of a society. Students will explore dominant forms by examining Hollywood cinema, classical and post-classical film, European cinema, and by examining alternative cinema, art cinema, key movements and concepts including genre, spectatorship and authorship.                                                                                                                                                                                                                                                                                         |                                                             |              |

| This course aims to enable students to present visual and performing arts criticism in correct scholarly form, to introduce them to different methods of carrying out research and to acquaint them with the methodology used in classifying bibliographies and reference works relevant to the subject area.                                                                                                                                                                                                                                                                                                                                                           |                                                             |              |
| <b>AVS625</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Architecture, Visual Arts and Communication Workshop</b> | <b>3 cr.</b> |
| The workshop target is to introduce the student to a new horizon in the field of professional communication and visualization of architectural representation. The main outcome of this course is the ability to know how and where to look for the communication tool, to evaluate it, to analyze it and apply it to an architectural project in any skill or new technology. The workshop is essentially oriented towards group work, synchronizing with all the research workshops proposed by the department.                                                                                                                                                       |                                                             |              |

| Students will use this course to complete an independent or team project. This project will help round out a student’s portfolio and will demonstrate an appropriate level of professional challenge. These projects may be a narrative film, documentary, animation, website, or mobile application, or they may be a thesis relevant to the field of specialization. Students will form a contract with the faculty concerning the content of their project. Completed projects will assist students in the professional or in the academic field.                                                                                                                    |                                                             |              |

| The planet is becoming urbanized. The city and architecture are a social production, covered by technical, theoretical, aesthetic, economic and sociological disciplines. This seminar aims to develop the faculties of architectural and urban observation in their most contemporary evolutions: cities in development, metropolization and rehabilitation issues, reconstruction and requalification. A critical view of the city, of its memory and its identity also builds a theoretical culture of the inhabited environments’ metamorphosis.                                                                                                                    |                                                             |              |

| This course defines the links and interrelationships between cinematography and other arts in relation to the different forms of artistic expressions and the many socio-cultural aspects: spaces, bodies, politics, aesthetics, language, time, narrativity. A cinema film is a signing system and visual and sound aspects, movements, and articulations. The significant dimension of a cinematographic space will allow to provide an analysis in an audiovisual, written or drawn form.                                                                                                                                                                            |                                                             |              |
| <b>CTA625</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Design: Innovation, Technology &amp; Arts</b>            | <b>3 cr.</b> |
| In regard to the socio-cultural, socio-aesthetic, economic, scientific, industrial and technological changes these days, our socioprofessional environment questions creative and evolving approaches in a prospective position, highlighting a reflection of contemporary design. This critical view will test the theory and practice, different situations of experimentation in the service of the contemporary world, such as the innovation in the environment regarding interfaces and intercultural contexts.                                                                                                                                                   |                                                             |              |
| <b>CTA630</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Media, Design &amp; Contemporary Arts</b>                | <b>3 cr.</b> |

The socio-economic issues and the cultural and political problems of the new international media are becoming a real need for global communication facing the evolution of the social practices and the stakes of contemporary art. In a cultural dynamic, this course seeks through the field of media and communication to acquire and evaluate theoretical knowledge and practical approaches related to the formal and functional evolution of contemporary spaces.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                               |              |

| <b>CTA635</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Critical Studies and Aesthetics</b>        | <b>3 cr.</b> |
| This course draws its essence from aesthetic theories and the study of various philosophical, sociological, and historical reflections that deal with the function of art, and that are open to criticism and to a theory of contemporaneity. Through this opening, we judge the theoretical influence of a critical thinking relative to the various problematics and the diverse intellectual disciplines, peripheral to the valorization of art.                                                                                                                                        |                                               |              |
| <b>CTA640</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Architecture, Design &amp; Environment</b> | <b>3 cr.</b> |
| Contemporary societies express new qualitative demands for comfort, identity, method, and sociability in a relationship with a high environmental quality combining innovations and concepts. A multitude of approaches and disciplines is studied at different scales with the urban, architectural, economic, bio-physical, technological, ecological, political, industrial, and natural context.                                                                                                                                                                                       |                                               |              |
| <b>CTA645</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Photography and Contemporary Arts</b>      | <b>3 cr.</b> |
| On the one hand, this course provides the student with technical tools for photographic practice and, on the other hand, the necessary elements of theoretical reflection. This acquisition enables the student to develop a semiotics of the photographic sign, while analyzing photographic works in contemporary art according to their different conceptual and artistic approaches.                                                                                                                                                                                                   |                                               |              |
| <b>CTA650</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Art and Modernity</b>                      | <b>3 cr.</b> |
| This course aims at questioning concepts defining modernity, through the ruptures and affiliations that trace the history and result in the innovation in contemporary society. It links the latter to art and to various artistic manifestations expressed by an evolutionary disruption.                                                                                                                                                                                                                                                                                                 |                                               |              |
| <b>CTA655</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Identities and Societies</b>               | <b>3 cr.</b> |
| This course introduces and examines the origins of society, its constituent elements, and its process of evolution, all three responsible for the configuration of its identity. It addresses the questions of the continuous change of the individual and of societies, the complexity generated by the diversities in their dissimilarities and social and cultural similarities. It also analyzes the regularly repeated reinterpretation of identities, based on these changes and its repercussions on representations in the arts.                                                   |                                               |              |
| <b>CTA690A</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Thesis Dissertation</b>                    | <b>3 cr.</b> |
| This program focuses on problematics related to questionings, the fields of study of which are based on various artistic disciplines. The student will have the ability to formalize a thought, to rationalize a practice and to respect the requirements of reflection and methodology, by questioning different conceptual visions and by developing a critical spirit of a chosen theme, written in a dissertation of 80 to 100 pages.                                                                                                                                                  |                                               |              |
| <b>CVA200</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Fundamentals of Typography</b>             | <b>3 cr.</b> |
| This course details the importance of typography in design and its essential significance in the graphic, printing and digital fields. It makes the student more aware of its advantage in communication. It teaches the character anatomy and its use in different contexts to optimize its results aesthetically and practically. It also explains what the criteria are when it comes to choose a font and the importance of its readability in all mediums formats: Books, magazines, posters, websites, logotypes, etc.                                                               |                                               |              |
| <b>CVA205</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Design Foundations</b>                     | <b>3 cr.</b> |
| The aim of this course is to introduce the students to the basic principles of Two-Dimensional design and its characteristics. It teaches where, when and how to consciously handle compositional elements, about the aesthetic and design logic. To learn the basic criteria and means of expression that accompanies the methodology (Observation, Analysis, Inspiration, Composition)                                                                                                                                                                                                   |                                               |              |

| This course will teach the basics of the After Effects CS application package. The student will learn about the world of 2D motion graphics, compositing and visual effects. Prerequisites: Completion of the Adobe Photoshop Basic Skills 1 and 2 courses, general graphics background and experience with Adobe Illustrator, and/or Premiere helpful.                                                                                                                                                                                                                                    |                                               |              |
| <b>CVA230</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Introduction to Digital Media</b>          | <b>3 cr.</b> |
| The course aims at introducing the students to the different type of media (text, images, sound, video, etc.) and the technology tools and formats used for manipulation and storage. It will highlight the difference between analog and digital formats, hardware and software, different type of connectivity and I/O devices. Then, every media is studied separately.                                                                                                                                                                                                                 |                                               |              |
| <b>CVA235</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Grids</b>                                  | <b>3 cr.</b> |
| Students will explore projects of greater complexity; learn how to analyze substantial data, appreciate the design functions of relating ideas and develop logical structural systems to organize information for legible and clear communication. Students will be able to transform manuscripts into publications i.e., book design, newspaper, magazine, and instruction manual and for mobile application. They will have to follow a design process to assess typographical text application, expression, hierarchy, sequential design, layout and page systems including production. |                                               |              |
| <b>CVA240</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Arabic Typography</b>                      | <b>3 cr.</b> |
| In this course the students will investigate the basic aspects of Arabic letterforms and typography through a variety of projects. Students are exposed to the historical background technical and aesthetic issues, and communicative abilities of typography as individual forms and as a text.                                                                                                                                                                                                                                                                                          |                                               |              |
| <b>CVA245</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Storyboard for Film</b>                    | <b>3 cr.</b> |
| Storyboards are a series of illustrations displayed in sequence for the purpose of pre-visualizing an animated or live-action film. A storyboard is essentially a large comic of the film, or some section of the film produced beforehand to help the directors and cinematographers visualize the scenes and find potential problems before they occur. Storyboard is the process of visual thinking and planning that allows a group of people to brainstorm together, fostering more ideas and generating consensus.                                                                   |                                               |              |
| <b>CVA250</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Critical Thinking</b>                      | <b>3 cr.</b> |

Trying to stop the creative stagnation of students, this course, as its name indicates it tries to integrate a polyvalent and flexible platform which answers to the problematic which come up throughout the semester, going through the technological evolution and its impact on the notion of creativity within advertising and graphics. This combination within all its parameters, presents itself under the shape of a workshop where « critical thinking » plays an important role of the motor within communication.

**CVA255 Cultural Studies 3 cr.**

Cultural Studies is an interdisciplinary field that looks different depending on the context in which it is practiced. This course focuses on the multiple perspectives of culture, including theoretical positions, high and low culture distinction, the rise of mass culture, ideology, racism, the social resistance, etc. through diverse case studies including literature, art, music, theatre, online culture, etc.

**CVA260 Illustration Art 3 cr.**

The purpose of this course is to initiate the student to the art of illustration on paper or any adequate material. How to pick the theme, how to come up with the concept, and how to proceed with the necessary steps to the final execution: Ink, gouache, watercolor, pastel and acrylics are the techniques to learn.

**CVA265 Calligraphy 3 cr.**

The student, at the end of the course, will be able to know the Arabic letter (family, construction, and composition), and will be able to write with a graphic pen through exercises of calligraphy and tracing. Be able to compose texts and letters. To better master typography depending on conventional methods being applied in infographics fields: The different techniques of composing letters and the harmony of composition. This course allows students to better use the Arabic letter in logo designs, handwritten slogans etc...

**CVA270 Advanced Typography 3 cr.**

In this course the students will learn to design aesthetic projects based only on typography and to express and execute their ideas to solve design problems.

**CVA275 Advanced Photoshop 3 cr.**

Advance production techniques in Adobe Photoshop. Class explores and implements digital imaging theory and processes to enhance and retouch photographs and create new works of art.

**CVA280 Printing Techniques 3 cr.**

The "Printing" course consists of teaching the designers the way to create the best possible print production for their designs. It introduces almost all the necessary tools and techniques of the print production and the how-to create a correct pre-press PDF file ready-to-print.

**CVA285 Comics 3 cr.**

"Comics" is an art onto itself and requires many abilities. In this course, "Comics", the student will learn to express his "pen strokes" and his/her imagination in different other domains: Advertising, Communication, Cinema, and animation.

**CVA290 History of Graphic Design 3 cr.**

This course is a general overview of the history of graphics. It goes back to the first inscriptions in caves arriving to the internet, all while going through the origin of symbols, different alphabets, printing, logos, typography, layout, and new media and even some artistic trends.

**CVA295 History of Advertising and Media 3 cr.**

This course is designed to explain to the student the advertising's rise to its position of prominence. It starts with the advertising's development as a communication tool, a cultural and economic phenomenon, and as a force that both constructs and reflects society. It retraces worldwide and local advertising campaigns, which have labeled advertising, and the commencement of the digital advertising era.

**CVA300 Computer 3D modeling 3 cr.**

Students will acquire and implement the fundamentals of 3D animation by using the Maya software.

**CVA310 Principles of Advertising 3 cr.**

Build an in-depth knowledge of advertising via a clear and academic theoretical teaching as to its aspects, the strategies it uses, the psychological approaches that allows it to convince and therefore influence a well-defined target audience, and eventually to zero in on the media supports of the advertising communication used.

**CVA315 Marketing and Advertising 3 cr.**

The initiation of the students to the basics of marketing allows the students to go on in a methodological and scientific way in order to orient their creativity and commercial communication.

**CVA320 Writing for Advertising 3 cr.**

The purpose of this course is to put weight on the power of ideation in visual communication: The importance of new creative ideas, spoken language and its application, its relation to the theme at hand, and the potential options between spoken language and slang. Adapting the same message in different languages such as English-French and vice-versa.

**CVA325 Freehand Graphics 3 cr.**

The course is a graphic project workshop, where the student learns to create a concept, to think of and conceive a graphic project. To quickly execute a presentation which communicates clearly the student's response to the problematic or commission.

**CVA340 Graphic and Advertising Design I 3 cr.**

This workshop is the first professional approach, which merges the technical know-how and puts it to the service of creativity. It helps creating the conception of logos, posters, in addition of the layout and the cohabitation of images and works on different supports.

**CVA350 Graphic and Advertising Design II 3 cr.**

The course enables students to transform the verbal content into a graphic language, through the elaboration of a global graphic communication chain. The styling of geometric forms in the conception of posters in addition to the use of the "mixed media" technique will be part of the proposed program. Visual composition is essential in the creation of the projects, which will be launched throughout the semester. The concept, creativity, coherence, and execution will be the criteria of success.

**CVA355 TV Idents Design 3 cr.**

In this course the student will learn how to think to create and execute a corporate TV ident, in close relation with TV identity. This course is a combination of interaction between corporate identity, animation, editing, music and coloring.

**CVA365 Media Strategies 3 cr.**

This course is designed to provide students with an understanding of a development of a marketing and communication plan. Planning, selection, and evaluation of all major mass media vehicles and the various decisions and problems that arise in those processes will be discussed and considered. In addition to gaining a broad knowledge of the various media techniques, patterns and the factors that influence the mass media decisions. The students will learn specifically the component of a media plan and the implementation of a media schedule.

**CVA370 Radio Spot 3 cr.**

This course aims to introduce students to the importance of audio in general and radio as a communication tool for advertising. Designing a spot requires a choice between several concepts, voice-overs, music, editing, and all factors that make a successful radio campaign.

**CVA375 Consumer Behavior 3 cr.**

The objective of the course is to allow the student to better know the buying motivation and the decision-making process as to better guide him in the choice and realization of advertising concepts.

**CVA380 Corporate Design 3 cr.**

Corporate Design is an exploration into the idea that memorable visual messages with text have the greatest power to inform, educate, and persuade an individual in general and a potential consumer. This course is an attempt to discover why some images are remembered while most are not.

**CVA390 History of Digital Media 3 cr.**

This course aims at introducing students to the use of digital tools in research, analysis, visualization, and sharing of historical data, documents, and texts. The goal is to provide a, largely open/free, toolbox that may be useful in the students' research activities. Furthermore, we will focus on understanding and analyzing the various shapes digital history takes and the possibilities it provides for new forms of scholarship.

**CVA395 History of Contemporary Art 3 cr.**

This course presents the notion of contemporary, as related to art, and goes through groups, movements and tendencies that governed contemporary art since 1945 in different countries, going through the after-war years and the transition between modern and contemporary and engulfing the 2000-2010 decade, and historically the 40s-90s years in addition to events which were going in France, Italy, United States and Asia.

**CVA425 Branding and Packaging 3 cr.**

This course emphasizes the application of graphic design elements to various forms of packaging. Packages are analyzed and positioned from a marketing point of view. Brand marks, visual graphics and color schemes are developed for individual products and extended product lines. This class is geared to those interested in product packaging and graphic design as well as those seeking to create portfolio-quality design work.

**CVA440 Advertising Design 3 cr.**

Advertising project is an important and distinct area of study within the visual communication industry. The course shares some common modules with visual design but has a strong emphasis on the relationship between the strategic thinking, design, to creative thinking and implementations, and the ability to direct the work of others. Students are encouraged develop key skills sought by employers, such as team working, effective communication and presentation skills, leading to greater confidence in the workplace.

**CVA450 Final Year Project 6 cr.**

The Final project is a semester-long endeavor in which each student develops Graphic design work that materializes her/his exploration of a topic of interest. The topic is identified by each student through a project proposal submitted for review and approval by a pool of active instructors in the program. The topic can be triggered by a particular experience, text, artifact, etc. could bridge with tangential cultural practices (cinema, literature, music, theater etc.) and/or related fields of study (media and communications studies, art history and theory, cultural studies, visual culture, etc.). The investigation however, should have design/visual implications that enable it to critically inform and contribute to the student's field of study in graphic design and to expand its margins within the purview of visual representation generally.

**CVA470 Advertising Photography 3 cr.**

The course focuses on the professional photographic illustration. To inform the students to translate an acceptable visual for an advertising project, while using the photographic digital media.

**CVA475 Seminar in Design 3 cr.**

The course is designed as a discussion of the major issues related to technology trends and change in communication. Students are expected to be able both to relate important information from the readings as well as offer their own interpretations of the ideas and issues discussed in class. Because of the uniqueness of some aspects of this topic, especially advances in global communications, the student will be required to think independently though still with a strong grounding in the relevant literature. To facilitate such discussion each session will be divided into three parts. First, discussion will center on the nature of the trend to be addressed that session. Students will gain an understanding of how that trend works the breadth of its scope, and its effects on international brands. Second, discussion will turn to the assigned literature for that session to examine what students have to offer concerning that topic. Finally, students will discuss the prospects for international change considering future developments in that trend.

**CVA480 Portfolio Design 3 cr.**

Preparation of a portfolio comprised of completed design projects: The evaluation and the demonstration of portfolio presentation methods based on the student's specific area of study. This course is designed to help the student gather all previous projects together and prepare a creative design portfolio consisting of the projects developed in Typography, Design Communication and all the essential courses taken. This course will educate students on how to create a living in the visual communication industry. Tips and lectures will be given to the students to make an impression with their work. Students will prepare their portfolio in the most creative way to face the industry with confidence.

**CVA485 Game Design 3 cr.**

Students acquire the fundamentals of game mechanics, game art, and game narratives.

**DAA208 Introduction to Space and Object 4 cr.**

This course will introduce students to the various fields of architecture of interior installations and design through a series of variables: volume, usage, body, material, scale, dimensions, representation, model, and expression. Through a theoretical and practical course and various short and long exercises, the first-year student will explore reality and develop his sensibility to space and object to be able to measure, perceive and represent.

**DAA209 Volume I 2 cr.**

**Prerequisites** ARI211 Or DAA211

This workshop is a first introduction to the third dimension, the students' first passage from surface to volume (low reliefs), from 2D representation to the architectural model. In it they learn and apply the uses and finality of said model. The objective is to give students the occasion to experiment with, create and explore plasticity. The workshop generally uses recycled elements and found objects and applies the visual and technical tools of the plastic arts.

**DAA211 Sketching and Drawing I 2 cr.**

A workshop teaching drawing. Teaching is based on analytical drawing and emphasizes the development of visual memory and the exploration of the expressive qualities of different tools and supports. Students will experience freehand perspective drawing, human figures, and drawing from nature.

**DAA212 Sketching and Drawing II 2 cr.**

**Prerequisites** DAA211 Or ARI211

A workshop teaching drawing. Teaching is based on analytical drawing and emphasizes the development of visual memory and the exploration of the expressive qualities of different tools and supports. Students will experience freehand perspective drawing, human figures, and drawing from nature.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                    |              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|--------------|
| <b>DAA213</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Volume II</b>                                   | <b>2 cr.</b> |
| The workshop explores basic notions of volume and mass, structure and envelop, interior and exterior. It shows through the development of architectural models how form expressed through different materials leads towards differing technological solutions (stratification, knotting, folding, etc.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                    |              |

| Knowing how to draw an architecture offers a deeper understanding of the subtleties and know-how that characterize buildings whether ancestral or contemporary. Freehand drawing is a personal exploration of space.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                    |              |
| Through a drawing, the student will be able to dissect the building from all angles and in several ways (study of shade and light, interior walk, structure...), which will enable him to assess the chosen building in terms of formal elements: scale, aspect, proportion, colors and materials; also, in terms of problem-solving reflected in the realization of the project. In this course, students use techniques of freehand drawing while trying to master different rendering techniques: pencils, Bic, pens, markers...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                    |              |
| By constructing these drawings (facades, interior perceptions, external perspectives...) the student will enrich his perception of the spatial design process and learn to express himself visually.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                    |              |
| <b>DAA216</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Plastic Expressions</b>                         | <b>2 cr.</b> |

| The objective of the workshop is to give students the occasion for personal plastic exploration and experimentation. The workshop generally uses recycled elements and found objects and applies the visual and technical tools of the plastic arts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                    |              |

| The objective of the course is to give students an understanding of the chronological order of events that constitute the history of art. They will use the methodological tools of the discipline, to learn how to situate, compare and understand the relationships between them through a study of their stylistic characteristics and their socio-historical context.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                    |              |

| Originating from the arts and craft tradition and then associated with the field of design, furniture as an aesthetic proposal shares with one or other of these fields a functional end. Through this course, the student will be able to develop a culture of artistic, aesthetic, technical and architectural knowledge, associated with crafts, decoration, furniture, carpentry, design, trend, and interior architecture. Following a chronological fragmentation, he will be able to identify a furniture style in its context of interior architecture, starting from the origins of making as human beings to our days and then place it in its cultural, artistic, social, and architectural environment. The aim of this lecture is to offer the student an acquisition of the culture of the workmanship. The content of the course is articulated on the historical and stylistic periods of antiquity until today. Taking into consideration the relational interaction between architecture, interior architecture, furniture, entity, design... |                                                    |              |

| Through a series of short projects (space design, object design, landscaping, architectural construction, ephemeral installation), students will be confronted with heterogeneous and contradictory data in regard to various themes. They will define their intentions using pictograms, texts and diagrams and finally communicate the project graphically (plans, sections, sketches), by shaping it on a board.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                    |              |

| The Technical Drawing course, a prerequisite for the Advanced Technical Drawing, is a set of communication techniques that will enable the implementation of strategies and pedagogical approaches, a constructive drawing logic and a know-how, while respecting all the norms and details, helping to develop the student's ability to graphically represent a geometric drawing and to apply geometric principles and requirements. The basic notions of the orthogonal representation of an architectural work are at stake in the technical representation and aesthetic considerations; this is an international graphic language framed by common and universal conventions and usages. The aim is to introduce the students to the necessary tools, precision and technical discipline: the use of drawing instruments, the plane representation in orthogonal projection (plan, section, elevation, axonometry), the techniques of expression and mediation tools.                                                                                     |                                                    |              |
| This course (Advanced Technical Drawing) will allow improving the graphic representations skills where the drawing and the idea turn into a constructed material reality. The student will acquire many skills such as the information structuring, the construct understanding, the determination and the combination of scales and views, and will be able to tackle the elements of the main and the second work as the building standard products, by questioning their raison d'être: stairs, framing, coating, partitioning, bays, structure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                    |              |

| This course allows students to acquire the foundations of carpentry and cabinet making and to receive an introduction to the different kinds of traditional and industrial types of furniture building, looking at assembly, veneers, and hardware. The course is completed with an initiation into the technical drawing of furniture (size drawing, dimensions, and nomenclature).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                    |              |

The aim of the course is to become acquainted with the special issues of designing a wooden construction and to realize the properties and possibilities of wood as a building material in the future built environment.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                         |              |

| <b>Prerequisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | DAA370 and DAA371                                       |              |
| A study of materials constituting different built systems, their implementation, and their behavior with time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                         |              |
| <b>DAA342</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>History of Art and Architecture</b>                  | <b>3 cr.</b> |
| During this course, the student will be able to understand art and architecture as complex phenomena of an intellectual, physical, social, political, and economic nature simultaneously, and identify their meanings through a historical approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                         |              |
| The course begins with the Renaissance (and the interest of humanism, which a great trigger for the mutations that will appear in the course of history) to reach the 21st century and theoretically explain all the great changes of the eras. The connection of art and architecture, as well as the influence of the two fields on each other are crucial. The student of Interior Design will be able to connect the forms of art and become aware of space, light, textures, through detailed examples.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                         |              |
| The course starts from the analysis of conceptions and describes the intellectual and material conditions of architectural and artistic production. Thus, the student will be able to develop his critical approach by relying on the buildings and the major works as examples, walk virtually in the interiors, and give his point of view depending on his perceptions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                         |              |
| <b>DAA360</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Communication and Graphic Design of the Project</b>  | <b>1 cr.</b> |
| In order to be as close as possible to the professional reality, this course will allow the student to acquire technical knowledge on the design of the layout through graphic design and conceptual reasoning via verbal communication.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                         |              |
| Through the diversity of approaches and tools, the student will be able to increase the visibility and coherence of the graphic and editorial content of the project to achieve a means of representation suitable to the understanding of his project: introduction to typography for an adapted use of content, use of a layout grid, layout of the geometric drawing, photos layout, images, perspectives, models, videos.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                         |              |
| The second part of the course prepares for a know-how through a practice of the techniques of oral and gestural communication. The impact of oral communication and speaking in public and before a jury is crucial. The student must know how to communicate through speech, organize his thoughts, express his ideas, and debate his project through language and different expression techniques.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                         |              |
| Through an oral, graphic, photographic, and spatial approach, the student will be able to acquire a personal vocabulary and a fluency in communication to testify explicitly the shaping essence of the project by the search for a visual concept.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                         |              |

| This workshop develops a reflection on the relationships between human beings and their built environment. Through drawing exercises, analysis of similar projects and the exploration of methods of design, the students develop their aptitudes for conceptualization of architectural ideas, the representation of spaces and forms, and their esthetic judgment on the space they conceive. The student will discover and experience the plastic expression as well as the architectural concept.                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                         |              |
| The three themes to be developed are: volumes and paths. Simple living space. Modular or ephemeral space.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                         |              |

| This workshop aims to design environments that consider the qualities of materials, the spatial communication, the circulation and the functioning, in order to articulate problematics related to the notion of living, to explore new ways of inhabiting the space, while confronting several existing interactions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                         |              |
| The three themes to be developed are: Bifunctional space (living/leisure). Sequential path. Educational space.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                         |              |
| <b>DAA405</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Introduction to Research Methodology</b>             | <b>1 cr.</b> |
| The objective of this course is to provide students with knowledge that enables them to produce a small-scale research work as a prerequisite for the Master's thesis. The research work on the Bachelor level mainly consists of text and illustration articulation (image, photos, plans...) in order to guide the student to understand, to explain facts and phenomena, to elaborate and to chain different reflections in regard to the theme in question. The understanding of theoretical reflection is essential: understand the definition of research axis, a hypothesis, argument, corpus and problematic. The student will encounter research situations that will allow him to reflect on the construction of a theoretical reflection in relation to a practical and functional approach: choose a relevant research axis, personalize a reflection and a reasoning by choosing a specific field of investigation and tools of data collection. |                                                         |              |

| 'You employ stone, wood and concrete, and with these materials you build houses and palaces. That is construction. Ingenuity is at work. But suddenly you touch my heart, you do me good, I am happy, and I say: This is beautiful. That is Architecture. Art enters in.' – Le Corbusier                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                         |              |
| This course presents a theoretical and practical approach to architecture about its connection to the urban context, and proposes reciprocal relations of a theoretical, poetic, plastic, programmatic and pragmatic nature.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                         |              |
| Architectural morphology must arouse interest in the manipulation of the fundamental notions of architectural and inhabited spaces (geometry, structure, scale, measurement, proportion, indoor/outdoor, full/blank).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                         |              |
| Projects on a modest scale should suggest simple themes and limited contextual issues. They carry out a conceptual strategy, an ordering of an architectural problematic and an analysis according to several criteria: the relation to the landscape context and the site, considering the conceptual approach, the quality of natural light, the connection between structure, spatiality and material, the quality of spatial perception, the discovery of atmospheres and emotion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                         |              |
| <b>DAA431</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Textiles</b>                                         | <b>2 cr.</b> |

| This course is an introduction to textile technologies and their application in the fields of architecture, furniture, and clothing. The objective is to understand the different technical aspects at the base of textile design (weaving, meshing, felt, printing, dyeing, etc.), the application of every field, and the use of materials (cotton, nylon, silk, etc.).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                         |              |

| The objective of this workshop is to prepare the future practitioners by introducing them into the logic of construction inherent in interior architectural work. Using applied real cases, the students are initiated into the different arrangements that tie in constructive elements. The projects relate to the three aspects of technical competence, representational drawings and creativity in proposed solutions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                     |              |

| The course will help the student become familiar with the various equipment techniques and constructive solutions of the building and the quality of the architectural spaces: artificial lighting notion, natural lighting devices, sanitary equipment and plumbing, distribution and drainage systems, factors and management of thermal energy, renewable energy, quality and acoustic treatment, buildings soundproofing, insulation and waterproofing, air conditioning, safety standard, fire...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                     |              |

| The interior architect and the designer should possess both creative and technical skills. From the beginning of the creative path, the student learns to respond gracefully, prevailing on the existing architecture and layout, creating spaces or objects that awaken emotions while making the uses and services expected by the users. In order to allow the maturation of composite learning matching with the academic training, the internship is an obligatory channel that will enable the student to immerse himself in the professional world and to have a better understanding of the real functioning of the companies or organizations. This professional placement takes part of the pedagogical curriculum and allows the practice of knowledge in a professional environment. The internship taking part of the first Cycle of the curriculum is a general approach to a broad profession that will help the students' better position themselves and choose what interests them in the years to come.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                     |              |

| Design Studio I allows the student to follow a creative practice: drawing the form, studying colors and experimenting materials and light, while initiating him to communicate his project through a text, orally, and through drawings and models. The design of objects integrates the various contemporary practices and confirms the sense of initiative and modes of expression.<br>Proposed themes: Material and plasticity. Design and ergonomics. Modularity. Aphorism. Shaping emotions. Contrasts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                     |              |

| Design Studio II allows the student to follow a creative practice: drawing the form, studying colors and experimenting the structure, materials and light, while initiating him to communicate his project through a text, orally, and through drawings and models. The design of objects integrates the various contemporary practices: Ecological approach, field logic, sustainable materials, economic purposes...<br>Proposed themes: Metamorphosis. Design and crafts. Design and social. Design and mechanism (biomimicry). Eco-Design. Poetics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                     |              |

| Design Studio III mainly focuses on the functional object, and on the development of a project in a creative spirit and a technical mastery. The educational objective of the course is to reinforce the student's persevering research process, which allows attaining a clear and tangible synthesis phase, to achieve a real functioning prototype.<br>Two projects will be launched during the semester, one approaching the furniture, and the other approaching the light. The process is based on reflection, abstract design, as well as on manipulation and testing with materials and techniques.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                     |              |

| "The purpose of construction is to make things hold together; of architecture to move us", said Le Corbusier.<br>There is an interaction between the inhabitant and the objects that surround him; this emotional relation to space engages the existence of the inhabitant as an intrinsic existence to a phenomenology of space. Through the created atmosphere, the language of architecture, like a body, becomes anatomical, therefore carnal, and substantial.<br>This seminar is a moment of reflection on the capacity of architecture, an open space to the creation of concepts, themes and subjects related to the conception of space and object, and equally open to multi-sensorially : harmony of material, materialization of light, appearance of phenomena such as noise, sound, colors, textures, material, heat, light, odors. Atmospheres are therefore an environmental condition of our dwelling, just like an envelope for the inhabitant, allowing him to find himself. A dwelling that gives rise to the world, a poetics to inhabit it, a phenomenology of a place that stimulates the senses.<br>This phenomenological observation of architectural identity creates a corporeal and material space that is an integral part of the theoretical and aesthetic conception of Luis Baragan, Mathias Goertz, Tadao Ando, and Peter Zumthor, to whom space is like a musical instrument and the language of architecture is as tactile, acoustic, olfactive, luminous, and colorful.<br>"When I work on a design I allow myself to be guided by images and moods that I remember and can relate to the kind of architecture I am looking for..." Peter Zumthor. |                                                     |              |

| The conceptual and functional approach to interior space is introduced by the study of the place as a plastic, technical and cultural phenomenon. The workshop focuses on the development between intention and intervention, representation and reality, which is reflected in an execution file through which the student will question the link between architectural technical constraints and aesthetic intentions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                     |              |

| Redefining an interior space, requalifying it and adapting it according to a specific use is essential for the Bachelor degree's final project. The student will approach the project following research and a methodology work on a specific topic, as acquired previously throughout the course 'Introduction to Research Methodology'. It is a question of approaching the project in regards to a functional and aesthetic program as the expression of a purpose and a lived experience that would be translated into specific dimensions and atmospheres. The workshop examines the basic notions of paths, envelope, and identity. Also, it will be necessary to approach the detail in the project.<br>The two themes to be developed are: Commercial space. Space themed restaurants.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                     |              |
| <b>DES570</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Thematic Design Studio I</b>                     | <b>4cr.</b>  |

The world is constantly changing! New technologies and ecological conflicts face new challenges for designers of the 21st century. Human beings are changing their ways of consuming, and interacting with the world around them. The broad societal, environmental, economic and cultural issues must make it possible to think of new uses and new services for modern contexts. This first thematic of the Master Curriculum allows the student to focus on innovative energy-oriented projects, centered on the materialization of electricity, the development of new energy sources or the promotion of Responsible behaviors.

**Thematic: Sustainable Innovation and Sustainable Design**

This theme emphasizes the identification and experimentation by product design, service design, and social design, to induce responsible practices. Responsibility towards the city, towards the human being, or towards day to day practice. The objective of this thematic is to offer a new reflection to the habits by taking an anchoring within the social and environmental values.

**Several projects can be tackled:**

- Lighting and urban signage: photovoltaic technology, self-sufficient energy
- Rethinking the tools of hospitals and households: Garbage cans, Composters ....
- The position of ecotourism in our modern area: rethinking the luggage, rethinking the bikes, the ritual of the meal
- Gardens in the city: shared gardens, roof terraces, vertical plans as a solution to create green cities.

Two projects will take place during the semester, enabling the student to concentrate on the same theme by addressing it from several angles. The proposals must be concrete, applicable on a daily basis and combine both the improvement of the living environment and energy efficiency. The result of these two projects is the ultimate test of the consolidation of research into technology, from theory to practice. The student then assimilates the transition to the professional level by tackling subjects that directly affects him. The projects will be executed on a real scale, while highlighting the conceptual approach, the plastic qualities and the functional dimension of the project.

**DES580 Thematic Design Studio II 4cr.**

Putting the human being at the heart of problems and finding solutions to well-being is one of the goals of every designer. All around us, we observe personal initiatives aimed at putting the individual at the forefront. Today, public policies and local initiatives come together and we must learn to develop synergy and solidarity. These social innovations are carried by people who get involved individually. This second thematic of the Master Cycle in Design tackles this question of social magnitude.

**Thematic : From the Individual to the Collective:**

Technology is and foremost a catalyst for designers to create intelligent objects and to challenge the gestures of our everyday life. The user is an actor and an innovator. Technology combined with Design Thinking offers the means to find solutions for individuals with targeted needs; Children with asthma, senior citizens, people with disabilities...

**Several projects can be tackled:**

- Diseases and solutions by object: the autistic child, the asthmatic child (project executed by Cyrille Najjar and Eve Outin), the blind child.
- Facilitating life of elderly: going out in the city, domestic objects, intelligent lighting.
- Active living (The productive life) : a moment of relaxation and questioning the spiritual moment, the moving image in space.

Two projects addressing this thematic will be developed throughout the semester, offering the student the opportunity to observe the world and the dynamics that surround it. The student will be evaluated according to the conceptual approach, the plastic and technical qualities, the functional dimension and the intellectual relevance emanating from the projects.

**DES621 Design and Communication 3 cr.**

This course covers the three related themes of conditions for sustainable development, the interaction of the object and its environment (private, public or urban), and the semantics of forms, in public space.

**DES622 Design and Communication 3 cr.**

The objective of this course is to explore ways of enhancing the skills of local craftsmen in order to renew craft traditions by establishing a dialogue between traditional practices and current uses.

**DES623 Industrial Design 3 cr.**

The workshop is related to the local and regional socio economic context, taking into account considering specific conditions of production, the labor market, and the needs of the local society. Teaching emphasizes technology and computer based tools in order to provide creative design instruments and production methods with a positive impact on business, society and the environment. The course takes into account considers the users' market with its fluctuations, one where the emergence of new meanings and the permanence of traditional values coexist, and the mode of production of local craft industries which have adapted to mass production through a variety of means.

**DIM210 User Centric Design 3 cr.**

This course will enable students to properly design any digital interface by following a detailed, fun and modern process based on the end users' behavior, interests and frustrations.

**DIM220 Fundamentals of Interaction Design 3 cr.**

Student will implement the foundations of interactive media including user-interface design concepts, optimization/performance issues, resources, and tools. Students combine audio, video, imaging, animation, and other media formats to construct an interactive product using industry-standard software.

**DIM225 Character & Object Design for Animation 3 cr.**

This course will introduce the student to the refinement of characterization for the purpose of animation. The articulation, personality, expressions of a character will be studied and experimented with in depth, as well as objects.

**DIM230 Advanced 2D Animation 3 cr.**

Student will acquire skills in the development of personality and emotion in animated characters is explored. Students will produce an animation of a character expressing emotions and also will work with multiple characters to increase the level of complexity.

**DIM315 Mobile User Interface 3 cr.**

This course will push students to explore the wide dimensions of mobile devices' user interface user experience and design guidelines.

**DIM320 Social Media Techniques 3 cr.**

This course aims at introducing students to discuss the nature of digital history, the importance of having a professional online presence, the fruitful gathering of information online, the structuring of digital bibliographies and archival databases, an introduction to spatial, textual, and numerical analysis, as well as data visualization, and the publication and sharing of results and primary documents.

**DIM325 User Interface Design 3 cr.**

**Pre-requisites** DIM210

This course will help students to explore the basic guidelines of user interface design, while also learning the new and updated trends and principles of UI.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                              |              |

| In this course, digital media design students trained in motion graphics, screenwriting, video editing and video and audio production will engage in diverse and unique multimedia final projects. By using their enhanced artistic competencies as derived from understanding of our visual (natural, personal, social and cultural) space, students will create their products in digital or electronic format. Through the semester students will have to show distinct approaches which activate transformations of their ideas from first sketches to the final application using web design, digital imaging, screen writing and media production. |                                              |              |
| <b>DIM420</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Advanced User Interface Design</b>        | <b>3 cr.</b> |
| This course will give students an in-depth look at the advances techniques of creating heavy and complicated user interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                              |              |
| <b>FLM316</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Introduction to Scriptwriting</b>         | <b>3 cr.</b> |
| The students will acquire basic knowledge and techniques of writing a narrative script for film. The students will be able to create and develop characters, and story line for classical film structure.                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                              |              |

| Students will acquire knowledge in the theory of film form. Students will apply these different forms through framing, lighting and assembling shots to create a system of expression based on the indirect time movement images.                                                                                                                                                                                                                                                                                                                                                                                                                        |                                              |              |

| Through advanced problems in writing for original film, students will write a feature film. Students will be coached and supervised by a mentor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                              |              |
| <b>FLM640</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Film and the other Arts</b>               | <b>3 cr.</b> |
| Students will discuss in class issues related to films and other arts, plus weekly film screening. Studies in interrelationships between on the one hand film and on the other painting, dance and theater, through examination of such issues as the different modalities of presence in film and theater, the various functions of the frame in film and painting, the correspondence of the freezing that is part of the cinema apertures (frozen frames), and the diegetic freezing of the dancer. May be repeated twice for credit.                                                                                                                 |                                              |              |
| <b>FLM650</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Film Authors</b>                          | <b>3 cr.</b> |
| Students will participate in discussions in class, screenings to be arranged. Studies of several critical discourses that have influenced the analysis of film: Walter Benjamin's "work of art in the age of mechanical reproduction"; Althusser's interpellation; Lacan's mirror's stage; Virilio's dromology and logistics of perception; Debord's society of spectacle; Edward Said's orientalism, etc.                                                                                                                                                                                                                                               |                                              |              |

| This course is intended for students in the first year of architecture. It includes the calculations and techniques that are an essential background for students training in this subject. : They will understand and learn how to draw the various architectural forms for the development of their projects and also have a strong prerequisite for science subjects such as resistance of materials and reinforced concrete.                                                                                                                                                                                                                         |                                              |              |

| Students will gain an appreciation and understanding for the fine art of photography through the study of basic photography skills and concepts. Students will start with a digital unit emphasizing composition and color. Students will also learn to operate and manipulate a 35mm SLR camera along with black & white film processing and printing in the darkroom. In addition, students will experiment with hand-tinting, multiple images and computer manipulation with Photoshop. Students will also learn various presentation techniques including dry mounting with a hot press and mat cutting.                                             |                                              |              |

Students will participate in discussions in class, screenings to be arranged. Studies of several critical discourses that have influenced the analysis of film: Walter Benjamin's "work of art in the age of mechanical reproduction"; Althusser's interpellation; Lacan's mirror's stage; Virilio's dromology and logistics of perception; Debord's society of spectacle; Edward Said's orientalism, etc.

**PUB505** **Advanced French Copywriting** **4 cr.**

Advanced techniques and applications of French copywriting, specifically in all advertising and communication forms and the best way to insure a catchy, readable and effective way of selling whatever the product or the social cause is.

**PUB506** **Advanced English Copywriting** **4 cr.**

Advanced techniques and applications of English copywriting, specifically in all advertising and communication forms and the best way to insure a catchy, readable, and effective way of selling whatever the product or the social cause is.

**PUB604** **Media Strategy** **3 cr.**

The advertising industry has undergone significant transformations in recent years as interactive and digital media have changed media and advertising. This course will explore the implications for media content, audiences, modes of media consumption and production, modes of delivery for advertising and methods of audience measurement within an online environment. Students will gain practical skills in how to use online environments for advertising, in how to target particular audiences and reach them with a wide variety of ads, and prompt them to act.

**PUB605** **Commercial and Cultural Environment** **3 cr.**

In this course, students will explore the commercial and socio-graphics parameters that influence the commercial communication. They will also study the psychological factors that influence the advertising message impact and pertinence.

**PUB608** **Propaganda and Critical Analysis** **3 cr.**

Politics are very closely associated with campaigns, or how to best express the convictions of a political entity through messages which vary across countries, allies, enemies or culture and society. Students will be introduced to the concept of decision-making in a world full of rivalries, hostilities, ideas, budgets, and wars. The role of propaganda will be scrutinized vis-à-vis its target audiences and how they pass overt and clandestine messages.

**PUB680A** **Final Project I** **6 cr.**

The Final project is a semester-long endeavor in which each student develops an Advertising Campaign that materializes her/his exploration of a topic of interest.

**SCE613** **Clothing and Theater Costumes** **3 cr.**

Stage costumes are defined as sets of clothes and accessories allowing the actor to embody characters on stage. A costume designer is involved in the creation of historical and contemporary costume for theater, opera, dance and film. As an integral element of stagecraft, a designer must possess an understanding of the meaning and the intentions of the piece.

**SCE620** **Scenography** **3 cr.**

The purpose of staging is to create a necessary and conducive context to the performance of a theatrical scene, through the shaping of space and time and always in relation to a text.

**SCE623** **Places and Spaces of Exhibition** **3cr.**

The workshop, while providing a rigorous research methodology, seeks to analyze the art of designing places and exhibition spaces and applying the art of establishing a classifiable and editable inventory.

**TLV351** **Introduction to Editing** **3 cr.**

Students will understand the various theories of montage (Eisenstein, Bazin, Deleuze, etc.), as well as the different styles of montage. Students will be able to use the different tools of nonlinear editing, as well as implement them by making several short videos.

**TLV352** **Advanced Editing** **3 cr.**

**Pre-requisites** TLV230 Or TLV351

Make several short video projects, and study various theories of montage (Bazin, Poudovkine, Eisenstein) as well as various styles of montage.

**TLV560** **Editing and Special Effects** **3 cr.**

This course allows the student to explore creative possibilities of non-linear film and video editing. It includes reinforcement of editing technics, and a practice of basic compositing technics, including keying, matting and key-framing using alpha channel controls.

# School of Engineering

## Overview

The mission of the School of Engineering at USEK is to provide an inspiring and supportive environment for high quality and effective education, develop students' creative and critical thinking, and graduate lifelong leaders capable of addressing emerging problems in light of the changes and new challenges in engineering careers. We seek to nurture in our students a drive for entrepreneurship and leadership and a commitment to ethical and professional standards, always fostering their humanity so they may work for a better world while focusing on the needs of Lebanon.

The School of Engineering consists of the following departments/programs:

### Department of Agricultural and Food Engineering

- Engineering Diploma in Agricultural Engineering
- Bachelor of Science in Engineering Sciences - Food Engineering
- Minor in Food Packaging and Distribution
- Minor in Sustainable Food Security
- Master of Science in Food Engineering
- Master of Science in Enology

### Department of Biomedical Engineering

- Bachelor of Engineering in Biomedical Engineering
- Minor in Biomedical Engineering
- Master of Science in Biomedical Engineering

### Department of Chemical and Petroleum Engineering

- Bachelor of Engineering in Chemical Engineering
- Minor in Petroleum and Natural Gas Engineering
- Minor in Process Engineering
- Master of Science in Chemical Engineering
- Master of Science in Petroleum Engineering

### Department of Civil Engineering

- Bachelor of Engineering in Civil Engineering
- Minor in Building Simulation
- Master of Science in Civil Engineering

### Department of Electrical, Telecommunications and Computer Engineering

- Bachelor of Engineering in Computer Engineering
- Bachelor of Engineering in Electrical and Electronics Engineering
- Bachelor of Engineering in Telecommunications Engineering
- Minor in Computer Engineering
- Minor in Electrical Installation
- Master of Science in Communications Engineering
- Master of Science in Computer Engineering
- Master of Science in Electrical and Electronics Engineering

### Department of Mechanical Engineering

- Bachelor of Engineering in Mechanical Engineering
- Minor in Material Sciences and Engineering
- Master of Science in Mechanical Engineering
- Master of Science in Industrial Process Engineering

## Administration and Full-time Faculty

Prof. Joseph El Assad, Associate Professor, **Dean**

Dr. Tilda Karkour Akiki, Associate Professor, **Associate Dean**

Prof. Charles Yaacoub, Professor, **Assistant Dean for Accreditation**

Dr. Nemr El Hajj, Assistant Professor, **Assistant Dean for Grants and Projects**

### **Professors:**

Prof. Charles Yaacoub

Prof. Joseph El Assad

Prof. Joseph Zalaket

Prof. Lara Hanna Wakim

Prof. Sandy Rihana

### **Assistant Professors:**

Dr. Adib Akl

Dr. Béchara Nehme

Dr. Elias Farah

Dr. Marie-Rita Hojeij

Eng. Rita Harb

### **Associate Professors:**

Dr. Alain Abi Rizk

Dr. Nabil Nemer

Dr. Nancy Zgheib Tabet

Dr. Nemr El Hajj

Eng. Pascal Damien

Dr. Samar Azzi Achkouti

Dr. Tilda Karkour Akiki

Dr. Youssef Rayess

### **Lecturers:**

Eng. Elie Abou Hamad

Br. Elie Saad

## Undergraduate Programs

### Bachelor of Engineering in Biomedical Engineering (English)

#### Accreditation

This program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>

#### Mission

The mission of the Biomedical Engineering Department is to rigorously prepare students for rewarding careers in the diverse fields of biomedical engineering and the health care industry, or in pursuing continued education in biomedical research or medicine.

#### Program Educational Objectives

1. Advance the students in their careers through innovation, critical thinking, leadership, life-long learning, proactivity and integrity.
2. Prepare students to succeed in post-graduate studies and industry employment in biomedical engineering or related fields.

#### Student Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

#### Degree Requirements

This program requires 146 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

*All the Level 300&above-Engineering Courses require a minimum passing grade of 70/100.*

*A grade of 70/100 increases the need to perform earlier detection on the final cumulative average for every student to help them out obtain a GPA $\geq$ 75 and let them register in their FYP and graduate. In addition to that students have to demonstrate a higher passing capacity for pre-requisite and specialization courses.*

## Bachelor of Engineering in Chemical Engineering (English)

### Accreditation

This program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>

### Mission

The mission of the Chemical Engineering Department is to ensure an educational environment with high standards, in order to prepare our graduates for excellence in chemical engineering and practice for a changing world; to advance standards of engineering professionalism, ethics and leadership and to provide development, security and safety of chemical engineers as well as an opportunity for lifelong learning and a career.

### Program Educational Objectives

Within a few years after graduation, Chemical Engineering graduates will:

1. Become leaders and responsible citizens, and demonstrate broad perspectives regarding ethics, professionalism, safety and social issues in chemical engineering and related disciplines.
2. Be able to develop and improve design processes in order to meet Lebanese market/needs requirements in a cost efficient manner and according to quality standards.

#### Student Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

#### Degree Requirements

This program requires 146 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

*All the Level 300&above-Engineering Courses require a minimum passing grade of 70/100.*

*A grade of 70/100 increases the need to perform earlier detection on the final cumulative average for every student to help them out obtain a GPA $\geq$ 75 and let them register in their FYP and graduate. In addition to that students have to demonstrate a higher passing capacity for pre-requisite and specialization courses.*

## Bachelor of Engineering in Civil Engineering (English)

Offered in Main Campus Kaslik and in RUC Zahle (only 68 credits in RUC Zahle)

### Accreditation

This program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>

### Mission

The mission of the Department of Civil Engineering is to provide quality education to help prepare highly qualified and competitive civil engineers; to develop innovative applications of engineering and scientific research; and to serve the industry, the engineering profession, and the community.

### Program Educational Objectives

Within a few years after graduation, Civil Engineering graduates will:

1. Advance in their careers as professional engineers, researchers, educators or entrepreneurs amid technological changes.
2. Demonstrate expertise and leadership in different fields of civil engineering, and use them to contribute to the sustainable development of society.

### Student Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

### Degree Requirements

This program requires 146 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

*All the Level 300&above-Engineering Courses require a minimum passing grade of 70/100. A grade of 70/100 increases the need to perform earlier detection on the final cumulative average for every student to help them out obtain a  $GPA \geq 75$  and let them register in their FYP and graduate. In addition to that students have to demonstrate a higher passing capacity for pre-requisite and specialization courses.*

## Bachelor of Engineering in Electrical and Electronics Engineering (English)

### Accreditation

This program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>

### Mission

The mission of the Electrical and Electronics Engineering program is to prepare electrical and electronic engineering graduates for productive engineering careers in industry, the governmental sector, sustainable systems or engineering in education by providing them with academic, technical, and interpersonal skills for a continual professional growth.

### Program Educational Objectives

Electrical and Electronics Engineering graduates will:

1. Advance in their careers as professional engineers, researchers, educators or entrepreneurs amid technological changes.
2. Demonstrate expertise and leadership in different fields of electrical and electronics engineering, and use them to contribute to the sustainable development of society.

### Student Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

### Degree Requirements

This program requires 146 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

*All the Level 300&above-Engineering Courses require a minimum passing grade of 70/100.*

*A grade of 70/100 increases the need to perform earlier detection on the final cumulative average for every student to help them out obtain a  $GPA \geq 75$  and let them register in their FYP and graduate. In addition to that students have to demonstrate a higher passing capacity for pre-requisite and specialization courses.*

## Bachelor of Engineering in Computer Engineering (English)

### Accreditation

This program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>

### Mission

The mission of the Computer Engineering program is to prepare undergraduate and graduate students to pursue successful and productive careers in computer engineering research and industrial practice through a deep understanding of the fundamentals of the field, their application in solving problems and creating products, while emphasizing leadership qualities and commitment to ethical

and professional responsibilities; to become accomplished professionals able to meet the continued technological advances in the discipline of Computer Engineering and IT-related areas through lifelong educational pursuits; and to individually contribute in the industrial development which is taking place in Lebanon and the Middle East.

### Program Educational Objectives

Computer Engineering graduates will:

1. Advance in their careers as professional engineers, researchers, educators or entrepreneurs amid technological changes.
2. Demonstrate expertise and leadership in different fields of computer engineering, and use them to contribute to the sustainable development of society.

### Student Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

### Degree Requirements

This program requires 146 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

*All the Level 300&above-Engineering Courses require a minimum passing grade of 70/100.*

*A grade of 70/100 increases the need to perform earlier detection on the final cumulative average for every student to help them out obtain a  $GPA \geq 75$  and let them register in their FYP and graduate. In addition to that students have to demonstrate a higher passing capacity for pre-requisite and specialization courses.*

## Bachelor of Engineering in Mechanical Engineering (English)

*Offered in Main Campus Kaslik and in RUC Zahle (only 68 credits in RUC Zahle)*

### Accreditation

This program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>

### Mission

The mission of the Mechanical Engineering Department is to educate our students for professional leadership as creative problem-solvers in a diverse society including conducting research for societal advancement, and engaging with alumni, industry, government, and community partners through outreach activities. In order to produce engineers prepared for success across a range of career paths, our academic program integrates training in engineering principles, critical thinking, hands-on projects, open-ended problem solving, and the essential skills of teamwork, communication, and ethics.

### Program Educational Objectives

After a few years from graduation, the Mechanical Engineering graduates will:

1. Demonstrate proficiency in the principles and methods in mechanical engineering through analytical and experimental solving problem.
2. Work in multifunctional and multicultural environments and teams to gain and transfer information using high level communication skills.
3. Become leaders and responsible citizens and demonstrate broad perspectives regarding ethics, professionalism, safety and social issues in mechanical engineering and related disciplines.
4. Understand the importance of professional growth and seek lifelong learning and continuous education.

### Student Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.

4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

#### Degree Requirements

This program requires 146 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

*All the Level 300&above-Engineering Courses require a minimum passing grade of 70/100.*

*A grade of 70/100 increases the need to perform earlier detection on the final cumulative average for every student to help them out obtain a  $GPA \geq 75$  and let them register in their FYP and graduate. In addition to that students have to demonstrate a higher passing capacity for pre-requisite and specialization courses.*

## Bachelor of Engineering in Telecommunications Engineering (English)

### Accreditation

This program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>

### Mission

The mission of the Telecommunications Engineering program is to develop candidates for the job market and for higher education in telecommunications engineering by providing essential engineering skills through a recognized educational program with an emphasis in signal processing and telecommunications technologies.

### Program Educational Objectives

Telecommunications Engineering graduates will:

1. Advance in their careers as professional engineers, researchers, educators or entrepreneurs amid technological changes.
2. Demonstrate expertise and leadership in different fields of telecommunications engineering, and use them to contribute to the sustainable development of society.

### Student Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

### Degree Requirements

This program requires 146 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

*All the Level 300&above-Engineering Courses require a minimum passing grade of 70/100.*

*A grade of 70/100 increases the need to perform earlier detection on the final cumulative average for every student to help them out obtain a  $GPA \geq 75$  and let them register in their FYP and graduate. In addition to that students have to demonstrate a higher passing capacity for pre-requisite and specialization courses.*

## Bachelor of Science in Engineering Sciences - Food Engineering (Hybrid<sup>i</sup>)

### Mission

The Bachelor of Science in Engineering Sciences supports the mission statements of both the Department of Agri-Food Sciences and the Faculty of Agricultural and Food Sciences through multidisciplinary teaching, learning and research activities in food science. The mission of the Bachelor degree is to produce socially and ethically responsible graduates who are leaders in dealing successfully with national and global food and

<sup>i</sup> Hybrid: Courses offered in French and/or English

health challenges and who will have a positive impact on their communities and the food industries for the betterment of the quality of human life.

#### Program Educational Objectives

1. Graduates will demonstrate technical competence in the manufacturing process of food.
2. Manage production of safe food products and apply innovative solutions to problems related to agri-food.
3. Carry out physical, chemical, microbiological and sensory analysis.
4. Implement quality systems in agri-food businesses.

#### Program Outcomes

- a. Students will develop knowledge in appropriate concepts, theories and emerging methodologies from the fundamental disciplines.
- b. Design and conduct experiments, as well as analyze and interpret data.
- c. Implement and verify quality and safety systems.
- d. Function in multidisciplinary teams.
- e. Apply management and business theory principles.
- f. Understand professional and ethical responsibility.
- g. Develop communication skills sufficient for entry into professional practice.
- h. Acquire the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.

#### Degree Requirements

All the Courses require a minimum passing grade of 60/100. A grade of 60/100 increases the need to perform earlier detection on the final cumulative average for every student to help them out obtain a GPA $\geq$ 70 and let him graduate.

This program requires 107 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                              |           |
|--------------------------------------------------------------|-----------|
| <b>General Education</b>                                     | <b>30</b> |
| General Education - Arts and Humanities                      | 3         |
| General Education - History                                  | 3         |
| General Education - Civic Engagement                         | 2         |
| General Education - English and French Communication         | 6         |
| General Education - Sports                                   | 1         |
| General Education - Religious Sciences                       | 3         |
| BIO211 - Cell Biology                                        | 3         |
| CHM212 - General Chemistry                                   | 3         |

## Engineering Diploma in Agricultural Engineering (Hybrid<sup>i</sup>)

### Accreditation

This program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>

### Mission

The Engineering Diploma in Agricultural Engineering supports the mission statement the Department of Agricultural Sciences through high quality teaching, learning, research and services that benefit the future agricultural engineers and their community. It produces agricultural engineers with excellent education, strong engineering

<sup>i</sup> Hybrid: Courses offered in French and/or English

skills and ethics required to successfully meet the challenging and changing needs and demands of the sustainable agricultural domain. It also enables its students to become creative and innovative engineers, active leaders and dynamic citizens.

#### **Program Educational Objectives**

1. Graduates will perform agricultural engineering tasks at an appropriate level of expertise and use collaborative skills and be willing to accept the ethical responsibility for the social and environmental impacts of engineering practices.
2. Formulate and/or design a system, process or program to meet desired needs in order to solve technological problems in the various branches of agricultural sciences.
3. Use their disciplinary knowledge, educational depth, and breadth to deal with changing career opportunities in agricultural and closely related industries.
4. Promote sustainable agriculture through the conservation of natural resources and provide advisory assistance and extension services to local and regional farmers on proper livestock production, processing and crop and animal production and protection, ecology and environment, landscaping and climate change.

#### **Student Outcomes**

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

#### **Degree Requirements**

This program requires 160 credits for students entering at the sophomore level (holders of freshman or a recognized baccalaureate - equivalent to 30 credits), distributed as following:

|                                                      |           |
|------------------------------------------------------|-----------|
| <b>General Education</b>                             | <b>30</b> |
| General Education - Arts and Humanities              | 3         |
| General Education - History                          | 3         |

\* Course with minimum passing grade requirement of 70/100.

## Academic Minors

### Minor in Biomedical Engineering (English)

#### Mission

A minor in biomedical engineering is offered for all engineering students (electrical, computer, mechanical, chemical and civil engineering) at USEK. This minor will help students to expand their knowledge in the field of biomedical engineering and to apply their skills in the restraint environment of the medical field.

#### Program Educational Objectives

Students of this program will be better prepared to successfully pursue:

1. Focused study leading to research or professional practice in biomedical engineering.
2. Careers in biomedical engineering industries or related technical and professional fields.

#### Program Outcomes

- a. Apply biomedical knowledge and skills in their professional career.
- b. Be familiar with complex systems in healthcare environments.
- c. Able to design and troubleshoot medical devices.

#### Minor Requirements

18 credits are necessary to fulfill requirements of the biomedical engineering minor: 3 credits from Group I courses, either 6 credits from Group II courses and 3 credits from Group IV or 3 credits from Group II and 6 credits from Group IV, 6 credits from Group III courses.

## Minor in Building Simulation (English)

### Mission

The mission of building simulation is to prepare students for a lifelong professional career, by providing personal development and engineering skills to analyze and design effective building management systems for complex buildings, based on a deep and intuitive understanding of physical and mechanical behavior. Furthermore, the program offers a good overview of the field and promotes the ability to co-operate on teams, to communicate in an international environment and to lead project work.

### Program Educational Objectives

1. To produce building services engineers capable of designing low energy building solutions that provide comfortable, productive indoor environments for the building occupants.
2. To produce building services engineers, with integrated building design knowledge, who understand the science, engineering, management relevant issues associated with buildings and their systems, through knowledge of: environmental issues; global warming; sustainability and the impact of buildings upon these and the environment in general.
3. To develop a strong approach to problem solving including resolution of conflicting goals through a series of design project modules and the generation, gathering and application of research knowledge.

### Program Outcomes

- a. A comprehensive understanding of building thermal performance and systems to control the internal environment of occupied spaces.
- b. A complete knowledge of those factors affecting human thermal comfort and air quality and in-depth understanding of how these influence the design of a building and its engineering systems to serve the occupants.
- c. An understanding of architectural form in relation to space and energy usage.
- d. An ability to apply, and to critically appraise the results of, computing methods for the solution of problems.

#### Minor Requirements

|-------------------------------------------|-----------|
| GMC430 - Fluid Mechanics                  | 3         |
| GMC451 - Heat Transfer                    | 3         |
| GMC461 - HVAC Systems                     | 3         |
| GMC465 - Fluid Mechanics II               | 2         |
| GMC508 - Computational Fluid Dynamics Lab | 1         |
| GMC536 - Air Conditioning                 | 2         |
| GMC539 - Computational Fluid Dynamics     | 3         |
| <b>Total</b>                              | <b>17</b> |

### Minor in Computer Engineering (English)

#### Mission

The minor in computer engineering is a program which aims to introduce students to fundamental hardware concepts such as logic design, digital electronics and microprocessors as well as software concepts such as algorithmic, web programming, and database systems. Students will also learn how hardware and software interact, for example in operating systems. With a minor in computer engineering, students will receive preparation for entry into the computer industry and they will become able to apply efficient computing techniques in their primary field of study.

#### Program Educational Objectives

The computer engineering minor will:

1. Provide an opportunity for students for entry into the computer industry.
2. Prepare students to become more effective at applying computing in their primary field of study.

#### Program Outcomes

- a. An understanding of the computer hardware architecture.
- b. An ability to use computer hardware and software to solve engineering problems.
- c. An ability to design and implement software modules to meet desired needs.

#### Minor Requirements

|                                         |   |

| GIN450 - Advanced Computer Architecture | 3               |
| GIN527 - Distributed Systems            | 3               |
| <b>Total</b>                            | <b>18 or 19</b> |

## Minor in Electrical Installation (English)

### Mission

The mission of the minor in electrical installation is to prepare graduates with an integrative understanding of electrical installation issues in a safe and supervised environment.

### Program Educational Objectives

1. Develop creative solutions to problems and conceive innovative approaches in the development and design of complex electrical installation plans.
2. Adapt the solution between the client's needs, the cost, environmental issues, and ethical responsibility.

### Program Outcomes

- a. Design and implement lighting, power, earthing, and lightning protection systems in buildings.
- b. Design the electric plans corresponding to phone, data, fire, intrusion, videophone, video monitoring, access control, distribution TV, sound, and home automation systems.

### Minor Requirements

|                                                        |           |
|--------------------------------------------------------|-----------|
| GEL312 - Electric Power Systems                        | 3         |
| GEL373 - Electric Power Systems Laboratory             | 1         |
| GEL430 - Electric Machines                             | 3         |

| GCV320 - Technical Drawings                            | 1         |
| GEL340 - Technical Drawing and Computer Aided Design   | 1         |
| GMC360 - Mechanical Engineering Drawings               | 2         |
| <b>Total</b>                                           | <b>16</b> |

## Minor in Food Packaging and Distribution (Hybrid<sup>i</sup>)

### Mission

The mission of the minor in food packaging and distribution is to deliver responsible graduates who are conscious and professional in dealing successfully with challenges related to this topic and who will have a positive impact on their communities and the food industries for the betterment of the quality of human life. This will be achieved by providing multidisciplinary teaching, learning and research activities on the importance of packaging and distribution of food commodities, the different types of packaging and their adequacy for specific types of food, food distribution techniques and conditions, the food supply chain, and food and packaging waste management.

### Program Educational Objectives

<sup>i</sup> Hybrid: Courses offered in French and/or English

Students will be able to:

1. Assess the quality and efficiency of packaging and distribution conditions used by different food industries.
2. Support food industries in improving their food quality and shelf-life by implementing sustainable alternatives to conventional food packages and distribution methods.
3. Understand how the decisions they take as consumers, workers, stakeholders, citizens and policy makers affect human welfare.

#### Program Outcomes

- a. Knowledge in appropriate concepts, theories and emerging methodologies related to food packaging and distribution.
- b. An artistic method in packaging design with functional traits, in terms of bioactive and biodegradable materials.
- c. Decision-making capacity in the food supply chain with theories related to goods distribution and purchasing.
- d. A broad education necessary to understand the effect of food waste and packaging on human health and the result of sustainable alternatives on the economy, society and the environment.

#### Minor Requirements

|                                                 |           |
|-------------------------------------------------|-----------|
| ARG400 - Packaging Design                       | 2         |
| CHM420 - Macromolecules, Polymers and Materials | 3         |
| GAA337 - Legislation and Standardization        | 3         |
| GAA342 - Food Packaging and Handling            | 2         |
| GAA414 - Waste Management in Food Industry      | 3         |
| TRA310 - Transport and Logistics                | 3         |
| <b>Total</b>                                    | <b>16</b> |

## Minor in Material Sciences and Engineering (English)

### Mission

The mission of the material sciences and engineering minor is to observe how engineers discover holistic and effective solutions to unsustainable practices. The program provides a concrete background for students to become innovative future leaders in established manufacturing firms and new entrepreneurial ventures, and gives our graduates a blend of theory and practice by preparing them for this most demanding field.

### Program Educational Objectives

1. Providing students with a profound (both detailed and broad) education in the domain of sustainable product creation.
2. Preparing students for an international design, manufacturing or research career.
3. Enabling students to present and defend scientific results.

### Program Outcomes

- a. Students will be capable of planning, designing and manufacturing products in a sustainable fashion in order to meet market demand.
- b. Students will be trained to apply all techniques, skills and modern engineering tools, which are required for engineering practice.
- c. Students will have a comprehensive understanding of engineering techniques and state-of-the-art methods.
- d. Students will have an ability to apply, and to critically appraise the results of, computing methods for the solution of problems.

#### Minor Requirements

|                                          |   |
|------------------------------------------|---|
| GMC310 - Statics                         | 3 |
| GMC360 - Mechanical Engineering Drawings | 2 |
| GMC440 - Strength of Materials           | 3 |
| GMC445 - Metallurgy                      | 3 |

|                                                |           |
|------------------------------------------------|-----------|
| GMC455 - Manufacturing Techniques              | 2         |
| GMC470 - Manufacturing and Workshop Lab        | 1         |
| GMC511 - Advanced Manufacturing Techniques     | 2         |
| GMC512 - Advanced Manufacturing Techniques Lab | 1         |
| <b>Total</b>                                   | <b>17</b> |

## Minor in Petroleum and Natural Gas Engineering (English)

### Mission

A minor in petroleum and natural gas engineering is accessible to undergraduate majors in various fields of engineering. The mission of the petroleum and natural gas engineering minor is to enhance the academic credentials of an engineering student in the field of exploration, development and production of oil and gas.

### Program Educational Objectives

The petroleum engineering minor will:

1. Provide an opportunity for students to enter careers in areas of national need such as the petroleum industry.
2. Prepare students for eventual postgraduate studies in petroleum engineering.

### Program Outcom

- a. Students will acquire essential knowledge in petroleum and natural gas extraction, particularly in processes as they relate to drilling, characterization and production.
- b. Students will be introduced to petroleum engineering tools for analysis and computation.

### Minor Requirements

|                                                |           |
|------------------------------------------------|-----------|
| GCH541 - Introduction to Petroleum Engineering | 2         |
| GCH543 - Drilling Engineering                  | 3         |
| GCH552 - Reservoir Characterization            | 3         |
| GCH579 - Analysis of Petroleum Products Lab    | 1         |
| GCV410 - Geology and Geophysics                | 3         |
| GMC430 - Fluid Mechanics                       | 3         |
| <b>Total</b>                                   | <b>15</b> |

## Minor in Process Engineering (English)

### Mission

The minor in process engineering is open to all engineering students in majors other than chemical engineering. The mission of this minor is to provide a solid foundation in chemical engineering principles.

### Program Educational Objectives

The process engineering minor will:

1. Provide an understanding of basic chemical engineering principles, concepts, and methodologies and how they are applied to the design and performance of industrial processes.
2. Offer an opportunity for students to find jobs in manufacturing, pharmaceuticals, healthcare, design and construction, pulp and paper, petrochemicals, food processing, specialty chemicals, microelectronics, electronic and advanced materials, and polymers.

### Program Outcomes

- a. Students will be able to define the principles of chemical engineering.
- b. Students will be able to analyze and emphasize the chemical process using computational and chemical engineering tools.

### Minor Requirements

|                                               |   |
|-----------------------------------------------|---|
| GCH350 - Introduction to Chemical Engineering | 2 |
|-----------------------------------------------|---|

|                                              |           |
|----------------------------------------------|-----------|
| GCH365 - Unit Operation                      | 3         |

| GCH412 - Chemical Engineering Thermodynamics | 3         |
| GMC430 - Fluid Mechanics                     | 3         |
| GMC451 - Heat Transfer                       | 3         |
| <b>Total</b>                                 | <b>17</b> |

## Minor in Sustainable Food Security (Hybrid<sup>i</sup>)

### Mission

The mission of the minor in sustainable food security is to deliver responsible graduates who are conscious and professional in dealing successfully with challenges related to this topic and who will have a positive impact on their communities and the food industries for the betterment of the quality of human life.

This will be achieved by providing multidisciplinary teaching, learning and research activities on the importance of macro- and micro- nutrients, as well as the microbiological and chemical content of different types of foods.

### Program Educational Objectives

Students will be able to:

1. Understand the importance of an appropriate and balanced diet, of strategies to control the proliferation of pathogenic microorganisms, and of laws and regulations related to food security.
2. Assess the nutritional quality of different communities' diets and the microbial and chemical quality of different types of foods.
3. Implement nutritional diets appropriate to different groups of people, and implement standards, hygiene and manufacturing practices crucial to support individuals and food service entities in providing safe foods.

### Program Outcomes

- a. Develop knowledge in nutritional concepts and design healthy diets suitable for different types of people, with emphasis on providing safe food free of contamination.
- b. An ability to function on multidisciplinary teams and communicate information related to human nutrition, food production, quality control, standards and regulations.
- c. Design practices and flows related to the production of hygienic and safe food.
- d. Knowledge of the basics of human rights in terms of access to safe food, and methods to achieve access to food in a sustainable manner.

## Graduate Programs

### Master of Science in Biomedical Engineering (English)

#### Mission

The Master of Science in Biomedical Engineering program aims to prepare students for advanced study and research in biomedical engineering. The mission of the program is to sculpt engineering with skills of

<sup>i</sup> Hybrid: Courses offered in French and/or English

designing, creating, analyzing innovative solutions and knowledge for improving healthcare lifestyle, devices, structures and facilities in Lebanon, the Middle East, and beyond. To achieve our educational mission, we reinforce our students with problem-solving and communication skills, we fortify their ability to think and analyze critically, we strengthen their creative and experimentation skills and we support them to discover the innovative scientific and engineering solutions.

#### Program Educational Objectives

1. Advance the students in their careers through innovation, critical thinking, leadership, lifelong learning, proactivity and integrity.
2. Prepare students to succeed in post-graduate studies and industry employment in biomedical engineering or related fields.

#### Program Outcomes

- a. Ability to shape careers by critical thinking, leadership and managerial skills combined with innovation and proactivity.
- b. Ability to tackle challenges in postgraduate or in industry employment in several biomedical fields.

#### Degree Requirements

|                                                               |                     |

## Master of Science in Chemical Engineering (English)

### Mission

The Master of Science in Chemical Engineering program aims to prepare students for advanced study and research in chemical engineering. The main goal of the program is to provide a solid background of research

fundamentals that will help chemical engineers to serve their society through research, education or other advanced activities.

#### Program Educational Objectives

1. Expand students' knowledge and skills in chemical engineering.
2. Prepare students to succeed in a doctoral program in chemical engineering or related fields.

#### Program Outcomes

- a. Ability to apply advanced level knowledge and skills in chemical engineering and related engineering areas.
- b. Ability to ethically conduct applied research and engineering design with professional written and oral communication skills.

#### Degree Requirements

|                                                                 |                     |
|-----------------------------------------------------------------|---------------------|
| <b>Common Core</b>                                              | <b>2</b>            |

## Master of Science in Communication Engineering (English)

*Double Degree with Université de Bordeaux*

### Mission

The mission of the Master of Science in Communications Engineering program is to expand students' knowledge and skills and prepare them to succeed in doctoral programs in communications engineering or related fields.

### Program Educational Objectives

Within a few years from graduation, graduates will:

1. Advance in their careers as highly skilled professional engineers, researchers, educators or entrepreneurs amid technological changes.
2. Demonstrate expertise and leadership in different fields of communications engineering and contribute to the development of the telecommunications sector.

**Program Outcomes**

- a. Ability to apply advanced level knowledge and skills in signal processing, telecommunications, and related engineering areas.
- b. Ability to ethically conduct applied research and engineering design with professional written and oral communication skills.

**Degree Requirements**

|                                                    |                     |
|----------------------------------------------------|---------------------|

**Master of Science in Computer Engineering (English)****Mission**

The Master of Science in Computer Engineering program aims to prepare students for advanced study and research in computer engineering. It provides a strong foundation that is needed to design, develop and use computer systems. The main goal of the program is to offer computer engineers a solid background of research fundamentals that helps them to serve their society through research, education or other advanced activities.

**Program Educational Objectives**

1. Expand students' knowledge and skills in computer engineering.
2. Prepare students to succeed in a doctoral program in computer engineering or related fields.

**Program Outcomes**

- a. Ability to apply advanced level knowledge and skills in computer engineering and related engineering areas.
- b. Ability to ethically conduct applied research and engineering design with professional written and oral communication skills.

## Master of Science in Electrical and Electronics Engineering (English)

### Mission

The mission of the Master of Science in Electrical and Electronics Engineering is to prepare professionals for advanced careers in private and public sectors and/or doctoral studies related to electrical and electronics engineering.

### Program Educational Objectives

1. Develop creative solutions to problems and conceive innovative approaches in developing and designing complex electrical and electronic circuits, devices and systems.
2. Prepare students to succeed in a doctoral program in electrical and electronics engineering or related fields.

### Program Outcomes

- a. Ability to apply advanced level knowledge and skills in electrical and electronics engineering and related engineering areas.
- b. Ability to ethically conduct applied research and engineering design with professional written and oral communication skills.

### Degree Requirements

|                                                                  |                     |
|------------------------------------------------------------------|---------------------|
| <b>Common Core</b>                                               | <b>2</b>            |
| GEN516 - Scientific English                                      | 2                   |
| <b>Specialization</b>                                            | <b>10</b>           |
| GEL600 - Special Topic in Electrical and Electronics Engineering | 3                   |
| GEL620 - Advanced Control                                        | 3                   |
| GEL631 - Generation and Transport of Electrical Energy           | 3                   |

| <b>Total</b>                         | <b>30</b> |

## Master of Science in Enology (Hybrid<sup>i</sup>)

### Mission

The Master of Science in Enology supports the mission statement of both the Department of Agri-Food Sciences and the School of Engineering through multidisciplinary teaching, learning and research activities in Enology. The mission of the Master degree is to produce socially and ethically responsible graduates who are leaders in dealing successfully with national and global enology challenges and who will have a positive impact on their communities and the wine industries.

### Program Educational Objectives

Graduates will:

1. Implement viticultural and enological practices and techniques in terms of production.
2. Develop self-learning, practical proficiency and teamwork in enology and contribute effectively in multidisciplinary exploratory and production teams.
3. Define production strategies and technical itineraries related to wine marketing.
4. Conduct experimental and research projects in vine and wine sectors.

### Program Outcomes

Students will:

- a. Develop strategic choices in terms of viticulture and enological practices.
- b. Design and conduct experiments, as well as analyze and interpret data.
- c. Identify, formulate, and solve problems in wine industry.
- d. Communicate effectively.
- e. Acquire a knowledge of contemporary issues.

### Degree Requirements

|                                                  |           |
|--------------------------------------------------|-----------|
| <b>Common Core</b>                               | <b>7</b>  |
| GAA615 - Seminar                                 | 3         |
| GAG560A - Advanced Specialized Internship        | 1         |
| STA515 - Statistical Analysis Methods            | 3         |
| <b>Specialization</b>                            | <b>21</b> |
| ENO505 - Wine and Terroirs                       | 3         |
| ENO511 - Viticultural Practices                  | 3         |
| ENO523 - Microbiology and Fermentation           | 3         |
| ENO525 - Wine Tasting and Sensory Evaluation     | 3         |
| ENO527 - Chemical Composition of Musts and Wines | 3         |

<sup>i</sup> Hybrid: Courses offered in French and/or English

|                                                      |           |
|------------------------------------------------------|-----------|
| ENO611 - Winemaking Technologies                     | 3         |
| ENO621 - Wine Global Market and International Law    | 3         |
| <b>Elective</b>                                      | <b>3</b>  |
| ENO501 - Arak, Sparkling Wine and Spirits Processing | 3         |
| <b>Capstone</b>                                      | <b>6</b>  |
| ENO690A - Master Thesis                              | 6         |
| <b>Total</b>                                         | <b>37</b> |

## Master of Science in Food Engineering (Hybrid<sup>i</sup>)

### Mission

The Master of Science in Food Engineering supports the mission statements of both the Department of Agri-Food Sciences and the School of Engineering through multidisciplinary teaching, learning and research activities in food science. The mission of the Bachelor degree is to produce socially and ethically responsible graduates who are leaders in dealing successfully with national and global food and health challenges and who will have a positive impact on their communities and the food industries for the betterment of the quality of human life.

### Program Educational Objectives

Graduates will:

1. Invest the scientific and engineering skills acquired throughout their studies to meet the emerging challenges in the food industry.
2. Develop self learning, practical proficiency and team work in food processing techniques and contribute effectively in multidisciplinary exploratory and production teams.
3. Produce safe food of high quality and nutritional values according to the latest national and international standards.
4. Innovate and design new products through the development of new processing techniques while considering their environmental effects and recycle food wastes.

### Program Outcomes

Students will:

- a. Apply knowledge of mathematics, science, and engineering.
- b. Design and conduct experiments, as well as analyze and interpret data.
- c. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
- d. Identify, formulate, and solve engineering problems.
- e. Communicate effectively.
- f. Acquire the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
- g. Recognize the need for, and an ability to engage in life-long learning.
- h. Acquire a knowledge of contemporary issues.
- i. Use the techniques, skills, and modern engineering tools necessary for engineering practice.

### Degree Requirements

|                                                    |           |
|----------------------------------------------------|-----------|

## Master of Science in Mechanical Engineering (English)

### Mission

The Master of Science in Mechanical Engineering program provides a graduate program leading to a professional mechanical engineering degree with a concentration in solid mechanics, thermal mechanics and mechatronics. The Department of Mechanical Engineering has active research interests in the following areas: composites and structured materials, computational fluid dynamics and heat transfer, advanced manufacturing, machinery design, control theory, design of thermal systems, knowledge-based engineering systems, noise control and vibration, robotics and automation, nano/micro system modeling, design and fabrication and sustainable energy.

### Program Educational Objectives

The objectives of the Master's Program in Mechanical Engineering are to teach students strategies, methods and techniques to:

1. Practice mechanical engineering in support of the design of engineered systems through the application of the fundamental knowledge, skills, and tools of mechanical engineering.
2. Enhance their skills through formal education and training, independent inquiry, and professional development.
3. Successfully pursue graduate degrees at the Ph. D. level.

### Program Outcomes

- a. Determine a span of knowledge and fundamental application of mechanical engineering and related engineering areas.
- b. Demonstrate a depth of knowledge in a chosen focus area of mechanical engineering or related areas, and an ability to work independently to complete a thesis.

### Degree Requirements

## Master of Science in Petroleum Engineering (English)

### Mission

The Master of Science in Petroleum Engineering aims at expanding, strengthening and integrating knowledge and understanding of the upstream sector of the petroleum industry. The program educates engineers for the petroleum industry based on earth and physical sciences, computer-based methods, design, economics and engineering aspects of oil and natural gas extraction. The mission of the program is also to prepare students to succeed in a doctoral program in the extraction and field processing of petroleum and natural gas and to satisfy industry demand for Lebanese petroleum engineers with special education in the oil and gas industries.

### Program Educational Objectives

1. Expand students' knowledge and skills in petroleum engineering.
2. Prepare students to succeed in a doctoral program in petroleum engineering or related fields.

### Program Outcomes

- a. Ability to predict reservoir behavior and to maintain and improve oil and gas production.
- b. Ability to ethically conduct applied research and engineering design with professional written and oral communication skills.

### Degree Requirements

| This course consists of a study of the structure of carbohydrates, simple and complex lipids, and amino acids and proteins. It also introduces enzyme kinetics and examines the metabolism of carbohydrates, lipids and proteins.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                       |              |

| <b>Co-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | BCH215 Or BCM215 Or BCH315 Or BCM315                  |              |
| These laboratory sessions, which accompany BCH215, apply methods of purification, recrystallization, and esterification. They provide students with hands-on experience in the laboratory preparation of a buffer, determination of its pKa and capacity, and tea's caffeine extraction. Topics covered include: qualitative and/or quantitative studies of carbohydrates, lipids, amino acids and proteins, determination of the kinetic parameters of the invertase, and the effect of temperature and pH variation on its activity.                                                                                                                                                                                                                               |                                                       |              |
| <b>BIO211 - BLG211</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Cell Biology</b>                                   | <b>3 cr.</b> |
| In this course students will study the structures and functions of prokaryotic and eukaryotic cells. We will focus on eukaryotic cells by examining different areas of cell biology including: plasma membrane and organelles structures and functions, cellular communication, the cell cycle and its regulation, as well as synthesis and function of macromolecules such as DNA, RNA, and proteins.                                                                                                                                                                                                                                                                                                                                                               |                                                       |              |
| <b>BIO228</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>General Botany</b>                                 | <b>3 cr.</b> |
| The course has two parts: plant histology and biology. Histology is the study of meristems, parenchyma and plant tissues, their origins, their characteristics, and roles. Plant biology looks at the lower and higher plants, their characteristics and their classifications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                       |              |

| The purpose of this course is to present a general outline on chemistry. Through this course chemistry is introduced in its various aspects: the structure of the atom, the various models, and the properties of the elements in the periodic table; various chemical bonds, the Lewis structure, VSEPR rules; thermochemistry, thermodynamics and chemical equilibrium; kinetic chemistry, reactions rate orders, the Arrhenius law; solutions chemistry, acids and bases and various acid base equilibrium; complexation, liquid solid equilibrium and solubility product; and Oxydoreduction titration and electrochemical cells.                                                                                                                                |                                                       |              |
| <b>CHM270</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Laboratory of General Chemistry</b>                | <b>1 cr.</b> |
| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | CHM212 Or CHE212 Or CHM210 Or CHE210                  |              |
| The general chemistry laboratory aims to develop different skills for the practical application of theoretical knowledge of general chemistry. Techniques to be learned: preparation and dilution of solutions, experimental verification of the Nernst equation, realization of different types of acid-base and redox titration by volumetric, calorimetric, pH-metric or potentiometric monitoring, and the study of solubility and precipitation reactions and characterization of ions present in a given matrix. The goal of the lab course is to ensure that students are capable of understanding the chemical concepts and to carry out experiments safely and carefully in the laboratory, to obtain data accurately and to manipulate the data correctly. |                                                       |              |

| This course introduces the role of information systems in business organizations with a focus on their application. It also emphasizes the fundamentals of database development and provides hands-on experience in designing and developing databases to meet organizational goals through instruction in database management and design. The scope of instruction will include database concepts, data modeling, relational and database development.                                                                                                                                                                                                                                                                                                              |                                                       |              |

| This graduate level course gives students the opportunity to enhance their writing abilities and develop their critical thinking. It attempts to help students achieve greater competency in reading, writing, reflection, and discussion emphasizing the responsibilities of written inquiry and structured reasoning. Students are expected to investigate questions that are at issue for themselves and their audience and for which they do not already have answers. In other words, this course should help students write about what they have learned through their research rather than simply write an argument supporting one side of an issue or another.                                                                                               |                                                       |              |

| This course covers the production of sparkling wines and the main types of spirits including Arak, Vodka, Whisky, Gin, Rum, Brandy and Tequila. It includes detailed information on regions of production, methods of production, commercial considerations and legal and business issues.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                       |              |
| <b>ENOS05</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Wine and Terroirs</b>                              | <b>3 cr.</b> |
| The aim of this course is to consolidate the students' knowledge about the Lebanese and the worldwide terroirs. In this course, presentations will be made about the terroir characteristic (soil, climate, grape variety), the relationship between wine and terroir, the specific oenological practices, as well as the appellations of each wine region.<br>The regions covered in this course are: Lebanon (as one appellation), the appellations of Bordeaux, Bourgogne, Rhône Valley, Languedoc Roussillon, South-west of France, Champagne, Douro valley (Portugal), La Rioja (Spain) and Nappa Valley (USA).                                                                                                                                                 |                                                       |              |
| <b>ENOS11</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Viticultural Practices</b>                         | <b>3 cr.</b> |
| This course covers the current practices for establishing a vineyard and maintaining its vigor and productivity. Topics covered include soil analysis, varietal selection, rooting cuttings, grafting and planting. The course also details the cultural practices in viticulture such as irrigation, fertilization, leaf removal, plowing, pruning, trellising, and phytosanitary treatments.                                                                                                                                                                                                                                                                                                                                                                       |                                                       |              |
| <b>ENOS23</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Microbiology and Fermentation</b>                  | <b>3 cr.</b> |
| This course details the microbial ecosystem from grapes to wines, the biology and growth of yeasts and bacteria. It covers alcoholic and malolactic fermentation processes as well as the conditions for better progress of these fermentations. This course also addresses the spoilage microorganisms, in addition to the selected productive microorganisms. It discusses the techniques and means for monitoring microbial stability: sulphuring, thermal destruction and filtration. The optimal conditions for wine packaging, conservation and storage will be discussed. Lab sessions will complete this course.                                                                                                                                             |                                                       |              |
| <b>ENOS25</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Wine Tasting and Sensory Evaluation</b>            | <b>3 cr.</b> |
| This course identifies and describes basic tastes, aromas and flavors in wines using reference standards as well as a variety of types and styles of commercial wine. Through lectures and guided tastings and discussions, students will evaluate the sensory properties of wine using methods explained                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                       |              |

in class. In addition, students will come away with an objective and analytical approach to sensory evaluation. They will also gain an appreciation of the importance of sensory evaluation to a successful winemaking business.

**ENO527 Chemical Composition of Musts and Wines 3 cr.**

This course describes the different chemical compounds present in musts and wine. It deals with the influence of different natural and technical conditions on the base material, and the evolution reactions affecting the final product. Laboratory sessions will be conducted to provide students with a hands-on experience in the analysis of wine.

**ENO611 Winemaking Technologies 3 cr.**

This course covers the practical aspects imposed in the processing of red wines (traditional and technological), white wines (dry and soft) and rosé wines (bleeding and press). This course details the preparation of juice / must, maceration steps, briefly the alcoholic and malolactic fermentation, aging in barrels, clarification, assemblies and the storage of finished product. The course also includes visits to wineries in Lebanon.

**ENO621 Wine Global Market and International Law 3 cr.**

This course provides students with insights into the nature, structure, functional mechanisms, and the complexities of the world's wine market, with emphasis on markets that are of strategic importance. Also, it examines key drivers in the world wine market and their impact on wine export dynamics and characteristics. In addition, the course highlights wine consumer behavioral aspects and successful marketing strategies employed in the wine consuming markets.

**ENO690A Master Thesis 6 cr.**

**Pre-requisites** STA 515 and ENO 511 and ENO 523 and ENO 525 and ENO527 and ENO 611 and GAA 615

The Master thesis is a contribution work to applied or fundamental research that includes the research and findings of the students about a selected topic in enology. It defines the problem and working hypotheses, the general approach, methods and techniques employed. It also includes the statistical analysis, results and discussions, recommendations for future research and a bibliography. The thesis should be prepared according to the guidelines provided by the department and presented to an examining committee for defense.

**GAA212 Introduction to the Food Industry 1 cr.**

This course provides an introduction to the food sector from both historical and modern perspectives. It highlights the important role of food scientists in bringing a product from farm to fork. This course also offers a summary of the different areas of study (food processing, food safety, food analysis, food product development, food management and food engineering) and career opportunities within this industry, with a special focus on Lebanon and the Middle East.

**GAA225 Molecular Diagnostics in Food Science 2 cr.**

**Co-requisites** GAA275

**Pre-requisites** BIO211

This course deals with the structure and properties of nucleic acids, the basic principles involved in the transmission and the repair of genetic material, as well as gene expression and its regulation. It also discusses the most common techniques of molecular biology applied to research or exploration of genetic material.

**GAA227 - AGT227 Microbiological Quality 3 cr.**

**Co-requisites** GAA277

**Pre-requisites** BIO211

This course is a study of the fundamentals of food microbiology, including its history, classifications, spores and their importance, and the most common and serious pathogenic food microorganisms. Fermentation, spoilage and control methodology are also discussed.

**GAA275 Laboratory of Molecular Diagnostics in Food Science 1 cr.**

**Co-requisites** GAA225

**Pre-requisites** BIO211

These laboratory sessions, which accompany GAA 225, enable students to extract, quantify and qualify DNA in a bacterial culture using electrophoresis. PCR using specific and non-specific primers, in addition to RAPD and SDS-PAGE protein extraction techniques, are performed. Methods of data interpretation and basic principles of bioinformatics are explained as well.

**GAA277 - AGT271 Food Microbiological Laboratory 1 cr.**

**Co-requisites** GAA227

**Pre-requisites** BIO211

These laboratory sessions, which accompany GAA 227, provide students with a technical experience of the preparation of liquid and solid culture media (differential, enriched, specific and selective). They deal with inoculation, incubation and enumeration of microorganisms found in liquid and solid food products. Staining procedures and biochemical tests such as ELISA and AGID are also performed.

**GAA312 Physical Chemistry and Sensorial Properties of Foods 3 cr.**

**Co-requisites** GAA372

**Pre-requisites** CHM 212

This course deals with the concepts and principles of physico-chemical experiments and analysis, in addition to the analytical techniques and instruments used in this type of analysis. It includes all the theoretical and practical information related to the implementation of sensory sessions and tests, and the collection and interpretation of sensory information, including statistical treatments. This course also emphasizes the industrial approach to follow in order to design a new food product and the sensory analysis involved in this step.

**GAA316 Fluid Thermodynamics and Mechanics 2 cr.**

**Pre-requisites** PHY210

This course covers the laws of thermodynamics and explains the exchange of mechanical (work) and thermal (heat) energy between the external environment and the food system. It deals with concepts such as the conservation of energy in processes, the direction of spontaneous change, the limited efficiency in converting heat into useful power, and tradeoffs between equilibrium thermodynamics and kinetics when designing processes. Equations of state are also explained to model fluids and calculate their thermodynamic properties.

**GAA327 Heat and Mass Transfer 3 cr.**

**Pre-requisites** GAA316

This course studies heat transfer by conduction (flat, cylindrical and spherical walls), convection (with and without phase change), by radiation and by molecular diffusion in foods and their processing systems. It deals with the turbulent system, mass transfer coefficients, the theory of two films and transfer at the interface. The course also emphasizes chemical kinetics (reaction speed and order) and the Arrhenius equation, with an interpretation of kinetic data.

**GAA333 Food Production Management 3 cr.**

This course helps students to understand strategic issues related to the management of a food chain, and to consider the elements of management that make up this chain. It also aims to train responsible staff for the production units as well as decision-makers in terms of cost, time, quantity and quality. The course provides students with an ability to lead a team and a capacity for analysis and synthesis.

**GAA334 - AGT334 Food Composition and Transformation 3 cr.**

**Co-requisites** GAA374

**Pre-requisites** CHM212

This course describes food as a complex system defined by an aqueous phase, a three-dimensional matrix of a protein, fat and/or carbohydrate nature, in addition to dispersed elements. It deals with foods obtained from the primary processing of agricultural products, and their composition. The principles of extraction and characterization of some food biomolecules resulting from these products are developed, as well as the chemical and/or enzymatic methods used in order to develop new food products.

**GAA337 Legislation and Standardization 3 cr.**

This course provides in detail knowledge of national and international legislation, the integration of concepts of hygiene and food safety in production procedures, and the standards applied to each food product. It is concerned with traceability and specifically highlights the role of traceability in food safety. The course deals with the importance and development of food related legislation, standards and the Codex Alimentarius among others.

**GAA338 Food Quality Management 3 cr.**

This course introduces the importance of quality management for an organization and the necessity for orientation towards total quality. It deals with the main tools of quality assurance which are used both at the product design and operational levels of the firm, such as HACCP (Hazard Analysis Critical Control Points) and ISO series (International Standard Organization).

The course also covers preliminary strategies, risks, internal control and the responsibilities of auditors.

**GAA342 Food Packaging and Handling 2 cr.**

This course covers three parts: materials, systems and their applications. The first part describes the properties, manufacture and function of metal, glass, paper and plastic packaging. The second part covers food packaging systems and equipment, including cleaning, forming, filling and assembly of packaging materials. The final part of the course focuses on the food packaging applications including aseptic packaging, food/packing interactions, sealing integrity, active packaging, studies on shelf life and packets handling.

**GAA357 Molecular Gastronomy 2 cr.**

**Co-requisites** GAA377 or AGT377

This course deals with introductory concepts in the culinary arts (formulation, food habits of consumers), and is a midway between gastronomy and food science. It enables students to understand the physico-chemical principles of culinary processes and the main interactions with ingredients, in order to acquire analytical thinking on culinary innovation.

**GAA372 Physical Chemistry and Sensorial Properties of Foods Laboratory 1 cr.**

**Co-requisites** GAA 312

**Pre-requisites** CHM212

These laboratory sessions, which accompany GAA 312, give students a hands-on experience of the laboratory tests performed to assay the vitamins and minerals in selected food products. Determination of lipids, carbohydrates and ethanol using chromatography is carried out as well. Furthermore, sensory analysis sessions are organized and statistical analysis of sensory data is performed.

**GAA374 Food Composition and Transformation Laboratory 1 cr.**

**Co-requisites** GAA 334

**Pre-requisites** CHM212

These laboratory sessions, which accompany GAA 334, enable students to evaluate the composition of various food products through different techniques used in the laboratories. Experiments include moisture and water activity, carbohydrate and protein analysis, fat analysis and characterization, rheology, and nitrite determination.

**GAA377 Molecular Gastronomy Laboratory 1 cr.**

**Co-requisites** GAA 357

These laboratory sessions, which accompany GAA 357, give students the opportunity to understand the functional properties of ingredients and the mechanical changes taking place in them. Stability of emulsions, particle shaping using substances such as sodium alginate and proteolytic enzymes are covered as well. At the end of the course, the students are expected to present an innovative culinary project.

**GAA412 Unit Operations in Food Engineering 2 cr.**

This course introduces the concept of process engineering applied to food engineering. The first part deals with the control of unit operations and processes. The second part covers the unit operations in the food industry taking place at room temperature, such as preparation of the raw material, size adjustment, membrane separation techniques and concentration, and mixing and biological processes.

**GAA414 Waste Management in Food Industry 3 cr.**

This course deals with the waste produced by the food industry. It is designed to provide an overview of the various sample collection, analytical, and data analysis techniques related to detection and control of waste. Topics covered include: technical and regulatory aspects of the handling and control of different waste types, effluent treatment, and management of hazardous and nonhazardous wastes in different categories of the food processing industry.

**GAA420 Food Processing Technology 2 cr.**

This course highlights different aspects of the processing of food commodities, of plant and animal origin. It deals with extraction and refining of different edible oils, fruits, vegetables, meat and dairy processing, and the technology of bread making. The course also covers the general procedures used in food preservation, auxiliary raw materials, specific processing technologies and packaging materials.

**GAA422 Unit Operations in Food Engineering II 2 cr.**

**Pre-requisites** GAA412

This course covers the unit operations in the food industry taking place at variable temperature. It includes thermal processes by adding heat (bleaching, sterilization, cooking, extrusion cooking, pasteurization, drying, evaporation, distillation, and spray-drying) and thermal processes by subtracting heat (cooling, freezing, freeze-drying, and crystallization). The last part of the course will present examples of production lines of some foods which include the different processes involved in product development.

**GAA425 Agri-Food Economy 2 cr.**

This course examines tools of the economics discipline applied in agricultural and food sectors. It details the roles and functions of economic factors and their interaction. Topics covered include: theory of consumer behavior, market demand, economics of input and product substitution, market equilibrium and product price, government intervention in agriculture, impacts of macroeconomic policy and trade actions and feasibility studies.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                     |              |

| This course provides an experimental-based approach to theoretical and practical applications of food and agricultural marketing. It also deals with the analysis of the agricultural market, supply, demand, modeling and prices of products. Topics covered include: the evolution of marketing, the significance and use of marketing research, marketing segmentation, product and/or service positioning, case studies, distribution, pricing and a variety of structures, and policies and strategies for agri-food products marketing communication and promotion.                                                                                                                                                                                       |                                                                     |              |

| This course provides a general review of toxicology related to food and the human food chain. Fundamental concepts are covered, including dose-response relationships, absorption of toxicants, distribution and storage of toxicants, biotransformation and elimination of toxicants, target organ toxicity, teratogenesis, mutagenesis, carcinogenesis, food allergy, and risk assessment. The course also examines the chemicals of interest to food, such as food additives, natural products, mycotoxins, and pesticides.                                                                                                                                                                                                                                  |                                                                     |              |

| This course describes the production methods of both alcoholic and non-alcoholic beverages with respect to formulations, processes and equipment. It highlights the basics of juice processing including quality assurance and control, extraction, pigments and pigment preservation, a regulatory overview, research standards and regulations. It finally covers the different enology aspects from selecting grapes to bottling the finished product, wine aging, preservatives, and storage and laboratory tests.                                                                                                                                                                                                                                          |                                                                     |              |

| This course details the techno-functional properties of food macromolecules (proteins, polysaccharides and lipids). It deals with hydration, gelation, emulsifying and foaming properties and aroma retention. The structure and techno-functional properties of flavorings and food additives are discussed as well as general concepts of formulation and legislation                                                                                                                                                                                                                                                                                                                                                                                         |                                                                     |              |

| This course highlights the major food ingredients and their physico-chemical roles in foods. The food formulation is discussed in terms of developing a commercial product that is characterized by its added value and that meets pre-determined specifications. Also, the concepts of food texture, including the physiological processes of texture perception, the importance of the mechanical properties and structure of foods, in addition to the different methods of sensory analysis, are included.                                                                                                                                                                                                                                                  |                                                                     |              |

| This course will include a description of the latest techniques for the detection of microorganisms. Another aspect of this course will be a detailed examination of engineering fermentation processes, with a component on the selection of ferments. The theoretical part will be associated with functional examples of the production of ferments in the laboratory on a pilot scale with the optimization of physico-chemical parameters in flask and fermenter. The last part will include methods of cultivation of microorganisms, biosynthesis and purification of molecules of industrial interest, bioconversion and biodegradation, and strategies of genetic engineering for the production of proteins of interest and the construction of GMOs. |                                                                     |              |

| This course is designed for food engineering students in order to initiate group discussions on current topics in their areas of study. Also, it includes critical analysis and evaluation of selected published scientific articles, in addition to presentations given by guest speakers from the public and private sectors on the emerging issues and challenges facing today's food industry. The course also includes mock job interviews and helpful tips to write a professional curriculum vitae.                                                                                                                                                                                                                                                      |                                                                     |              |

| This course deals with the aspects needed by any modern agri-food business to remain competitive by developing new products. It introduces the students to the successive stages of innovation with a focus on the link that should be strengthened between science, technology and business sectors. The course also highlights the legal and social aspects, in addition to the market study and business plan, needed to establish new firms. Also, it covers some technical details for development of new products.                                                                                                                                                                                                                                        |                                                                     |              |

| This course develops the concepts of industrial automation and control of food industrial process. The first part of the course, industrial automation, covers modeling of industrial processes through physical principles and identifying these processes using time and frequency domain techniques. The second part, process modeling and control, involves Programmable Logic Controllers (PLC) with an explanation of their hardware and software and special attention to Ladder Programming.                                                                                                                                                                                                                                                            |                                                                     |              |

|                       | This course covers the mathematical modeling of food engineering processes used in the industry in order to reduce the number of experiments, and optimize and improve the automation and control capabilities. It includes topics such as: the roles and applications of modeling in agricultural and food processes based on conservation principles of momentum, heat and mass; a systematic approach to model building; and formulation of a differential equation for modeling, applied to various agricultural and food engineering problems.                                                                                                                          |              |

|                       | This course highlights the importance of quality assurance on the health of consumers in the face of increasing demands for food quality and fast changing regulations. It emphasizes the fact that food quality assurance is not an option but rather an imperative. Also, it provides agri-food engineers with knowledge and skills for developing a coherent and comprehensive food management system (SOPs, GMPs, HACCP, ISO22000) that reflects their organization's professional standards, ethics, philosophy and values.                                                                                                                                             |              |

|                       | The final thesis is an original endeavor in applied or fundamental research. It serves to synthesize, integrate and apply knowledge from earlier relevant courses in the program and to tackle significant genuine topics in agricultural engineering. The thesis demonstrates knowledge of the field and makes an innovative contribution to new theories and practices. It is designed and completed under the direction of a thesis supervisor according to Faculty guidelines and presented to an examining panel for defense.                                                                                                                                           |              |

|                       | This course develops the concepts of industrial automation and control of food industrial process. The first part of the course, industrial automation, covers modeling of industrial processes through physical principles and identifying these processes using time and frequency domain techniques. The second part, process modeling and control, involves Programmable Logic Controllers (PLC) with an explanation of their hardware and software and special attention to Ladder Programming.                                                                                                                                                                         |              |

|                       | This seminar course helps students to develop the analytical skills required to evaluate scientific work. It teaches students to organize, design, and deliver formal presentations, to formulate research questions and an hypothesis, to use appropriate research design and methods and to write a literature review and a thesis proposal in agricultural, nutritional and food sciences disciplines.                                                                                                                                                                                                                                                                    |              |

|                       | This course covers the mathematical modeling of food engineering processes used in the industry in order to reduce the number of experiments, and optimize and improve the automation and control capabilities. It includes topics such as: the roles and applications of modeling in agricultural and food processes based on conservation principles of momentum, heat and mass; a systematic approach to model building; and formulation of a differential equation for modeling, applied to various agricultural and food engineering problems.                                                                                                                          |              |

|                       | This course introduces students to a broad spectrum of topics exploring agriculture and illustrating applied principles of biological systems and how they relate to agriculture. Topics presented include plant science, animal science, biotechnology, soil science, food security, natural resource management, and sustainable agriculture. It also describes the different Lebanese agricultural governmental and non-governmental organizations.                                                                                                                                                                                                                       |              |

|                       | This course introduces students to the basics of fieldwork techniques such as greenhouses and preparation of agricultural land. It covers topics such as potting, transplanting, fertilization, pruning, grafting, and plant propagation. It also includes technical farm visits.                                                                                                                                                                                                                                                                                                                                                                                            |              |

|                       | This course is designed to introduce students to the study of zoology at the organismal and organ function levels. The lecture section will review the general principles of modern zoological theory and provide the students with an introduction to recent advances in zoology in the areas of systematics, evolution, reproduction, development, animal diversity, and animal ecology. The laboratory section is designed to allow students to become familiar with the form and function of major animal phyla through observation of living animals, study of prepared slides, examination of model specimens and museum mounts and dissection of preserved specimens. |              |
| <b>GAG260A-B</b>      | <b>Internship I</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>1 cr.</b> |
|                       | This introductory internship is an individualized program whereby students are apprenticed to proper officials to gain practical experience in agricultural and/or food facilities. It provides opportunities to apply skills, concepts and theories in a practical context.                                                                                                                                                                                                                                                                                                                                                                                                 |              |

| This course develops an understanding of the principles of ecology, the life supporting and resource generating structures and functions of the ecosystems. It explores the role of atmosphere, hydrosphere and lithosphere in sustaining life. The course also analyses reasons and effects of current and future environmental problems as well as different aspects of sustainable development.                                                                                                                                  |                                                 |              |
| <b>GAG324</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Agrometeorology and GIS</b>                  | <b>3 cr.</b> |
| This course explores the theoretical and practical aspects of agricultural meteorology and geographic information systems (GIS). It provides basic knowledge in agrometeorology related to the agricultural operational applications. It also exploits the climatic data in various agricultural activities in terms of designing and mapping products based on spatial analysis tools, particularly the GIS.                                                                                                                       |                                                 |              |

| This course describes the functioning of living organisms and their adaptation mechanisms. It covers the digestive system, its motricity and secretion, the digestion and absorption particularly in monogastric and polygastric mammals, the excretory system and the maintenance of osmolarity and composition of water and ions. The course also focuses on different phases of reproduction, with a particular emphasis on mammalian spermatogenesis and oogenesis, fertilization, pregnancy, lactation, puberty and menopause. |                                                 |              |

| This course illustrates processes controlling the distribution and formation of soils. It also examines their chemical, physical, and biological properties covering chemical composition and morphological properties, interaction between solid, liquid, and gaseous components, and relationships between plant, soil, and water. It also focuses on soil properties in managing the quality and fertility of agricultural terrains.                                                                                             |                                                 |              |

| This course provides the basic plant physiological principles and the interactions with their environment. It is designed to survey contemporary aspects of plant physiology with emphasis on recent research progress in related fields. Topics covered include water transport, mineral and organic nutrition, phytohormones, development and stress physiology.                                                                                                                                                                  |                                                 |              |

| This course discusses principles and innovations in irrigation management. It provides a mastery of aspects determining the water balance of cultivated fields and the calculations of crop water requirements. Topics covered include soil–water relations, evapotranspiration, chemigation and technical aspects of pumps, pipes, drips, sprinklers and irrigation systems scheduling and feasibility.                                                                                                                            |                                                 |              |

| This course presents the principles of nutrient management as related to soil, growth media, plant requirements and fertilizer management systems. It discusses the use, manufacture, properties and fate of common organic and chemical fertilizers. The course also describes the methods of application and their effects on soil reactions.                                                                                                                                                                                     |                                                 |              |

| This specialized internship involves off–campus work providing training opportunities for the practicum experiences with specific hands–on training and know-how in almost every discipline of agricultural and food sectors. It allows students to apply skills, concepts and theories in a practical context.                                                                                                                                                                                                                     |                                                 |              |
| <b>GAG370</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Pedology Laboratory</b>                      | <b>1 cr.</b> |
| <b>Co-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | GAG340                                          |              |
| These laboratory sessions, which accompany GAG 340, provide hands–on practical experience with the main techniques used in physical, chemical, and morphological characterizations of soils. This laboratory also explains the calculations performed utilizing the data collected from soil testing procedures.                                                                                                                                                                                                                    |                                                 |              |
| <b>GAG371</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Plant Physiology Laboratory</b>              | <b>1 cr.</b> |
| <b>Co-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | GAG342                                          |              |
| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | BIO228                                          |              |
| These laboratory sessions, which accompany GAG 342, contribute to the understanding of how plants function. It provides students with hands–on experience in basic physiological principles related to nutrient deficiencies, membrane permeability and composition, water/nutrient absorption and translocation, transpiration, photosynthesis and physiological functions of growth regulators.                                                                                                                                   |                                                 |              |
| <b>GAG372</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Anatomy and Animal Physiology Laboratory</b> | <b>1 cr.</b> |
| <b>Co-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | GAG325                                          |              |

These laboratory sessions, which accompany GAG 325, provide hands-on practical experience in identification, characterization and counts of blood and sperm cells. This laboratory also examines the structure of the skeleton, glands, female and male reproductive organs.

|                       |                                |              |
|-----------------------|--------------------------------|--------------|
| <b>GAG411</b>         | <b>Agricultural Entomology</b> | <b>2 cr.</b> |
| <b>Co-requisites</b>  | GAG472                         |              |
| <b>Pre-requisites</b> | GAG242                         |              |

This course focuses on the study of the biology of insects. It deals with morphology, physiology, phylogeny, behavior, ecology, and population dynamics of insects. The course also highlights the importance of insects as agricultural pests and their chemical, integrated, biological and cultural methods of control. Complementary laboratory sessions given in addition to lectures include an examination of the different orders, families of insects as well as a preparation of an insect collection. It provides students with insect dissection skills and examination of the digestive, reproductive, nervous and circulatory systems.

|                       |                       |              |
|-----------------------|-----------------------|--------------|
| <b>GAG413</b>         | <b>Phytopathology</b> | <b>3 cr.</b> |
| <b>Pre-requisites</b> | BIO228                |              |

This course is divided into two main parts. The first part consists of presenting plant pathology, bacteriology, virology and nematology as well as their importance and utility. It includes topics on disease origins and classifications, disease development, spread and epidemiology, the relationship between disease progress and yield reduction, classification, reproduction and dissemination of fungi, bacteria, mollicutes, viruses and nematodes. It also presents mechanisms of plant invasion by pathogens and those of plant resistance. The second part is subdivided into five themes. The first one is an introduction to pesticides and the four other themes look at fungicides, insecticides, herbicides and biopesticides. Active ingredients will be presented according to chemical family, mode of action and targeted plant pests.

|               |                         |              |
|---------------|-------------------------|--------------|
| <b>GAG420</b> | <b>Renewable Energy</b> | <b>2 cr.</b> |
|---------------|-------------------------|--------------|

This course provides fundamentals of energy systems and renewable energy resources related to social, economic and environmental issues. It emphasizes alternative energy sources and their technology and application. The course explores society's present needs and future energy demands. Topics covered include conventional energy sources and systems (fossil fuels and nuclear energy) as well as alternative and renewable energy sources (biomass, hydro, geothermal, wind, solar and tidal powers).

|               |                    |              |
|---------------|--------------------|--------------|
| <b>GAG425</b> | <b>Aquaculture</b> | <b>2 cr.</b> |
|---------------|--------------------|--------------|

This course deals with the fundamental principles of aquaculture and the activities associated with their culture, harvesting, processing and husbandry.

|               |                   |              |
|---------------|-------------------|--------------|
| <b>GAG430</b> | <b>Apiculture</b> | <b>2 cr.</b> |
|---------------|-------------------|--------------|

This course deals with beekeeping principles and honey production, diseases, pest management and pollination ecology. Topics covered include beekeeping and aquatic animal history, biology, chemistry, nutrition, safety and management.

|               |                          |              |
|---------------|--------------------------|--------------|
| <b>GAG428</b> | <b>Field Work III S1</b> | <b>1 cr.</b> |
|---------------|--------------------------|--------------|

**Pre-requisites** GAG329 or GAG328

This course covers topics such as fertilization, insect pests and diseases, pruning and management of tomato, cucumber, potato, egg plants, pepper, banana, strawberry, and citrus production. It also includes technical applications in goat and swine farms.

|               |                          |              |
|---------------|--------------------------|--------------|
| <b>GAG429</b> | <b>Field Work III S2</b> | <b>1 cr.</b> |
|---------------|--------------------------|--------------|

**Pre-requisites** (GAG328 Or GAG329)

This course covers topics such as fertilization, insect pests and diseases, integrated pest management, pruning and crop management of cucumber, melon, tomato, strawberry, eggplants, and cut flowers. It also includes feasibility studies, experimental designs, calculation and installation of irrigation systems, and new technologies in tomato grafting.

|               |                       |              |
|---------------|-----------------------|--------------|
| <b>GAG432</b> | <b>Field Trips S1</b> | <b>1 cr.</b> |
|---------------|-----------------------|--------------|

This course involves visiting agricultural, animal and food manufacturing facilities. It provides an enriching experience and an opportunity for students to explore agricultural, animal and food sector operations. The course improves students' professional capabilities and communication skills. A special linkage is created between students and stakeholders, enhancing a significant professional discussion.

|               |                        |              |
|---------------|------------------------|--------------|
| <b>GAG434</b> | <b>Field Visits II</b> | <b>1 cr.</b> |
|---------------|------------------------|--------------|

**Pre-requisites** GAG360B

This course involves visiting agricultural, animal and food manufacturing facilities. It provides an enriching experience and an opportunity for students to explore agricultural, animal and food sector operations. The course improves students' professional capabilities and communication skills. A special linkage is created between students and stakeholders, enhancing a significant professional discussion.

|               |                       |              |
|---------------|-----------------------|--------------|
| <b>GAG442</b> | <b>Animal Science</b> | <b>3 cr.</b> |
|---------------|-----------------------|--------------|

**Pre-requisites** GAG242

The course identifies the scientific art of maintaining and improving animals under domestication including breeding, genetics, nutrition, and housing. It covers the production of animal meat, the general conditions of fattening, and livestock farming systems. The course also deals with animal genetics and various methods of reproduction.

|               |                      |              |
|---------------|----------------------|--------------|
| <b>GAG443</b> | <b>Arboriculture</b> | <b>3 cr.</b> |
|---------------|----------------------|--------------|

**Pre-requisites** GAG344

This course describes the principles and practices of fruit trees. It deals with tree selection and planting to fit climatic, space and edaphic conditions as well as diagnosing abnormalities. The course also covers modern commercial fruit science, mineral nutrition, flower and fruit development, pollination, dormancy and winter injury, cultural responses and pest management practices.

|               |                                |              |
|---------------|--------------------------------|--------------|
| <b>GAG444</b> | <b>Crop Production Systems</b> | <b>3 cr.</b> |
|---------------|--------------------------------|--------------|

**Pre-requisites** GAG342

This course examines the development, implementation, management, production, marketing and enterprise operations across a range of agricultural plant industries. It emphasizes the sustainability of plant and animal production to meet human needs. This course is also oriented towards the production of quality forage for herds in farms.

|               |                                                        |              |
|---------------|--------------------------------------------------------|--------------|
| <b>GAG445</b> | <b>Special Topics in Agriculture and Food Sciences</b> | <b>0 cr.</b> |
|---------------|--------------------------------------------------------|--------------|

This course is designed to provide students with key concepts, current issues, research and new trends that are pertinent to professionals working in agricultural sectors, food industries, academia, government and NGOs. This seminar course is given by invited national and international speakers.

|               |                         |              |
|---------------|-------------------------|--------------|
| <b>GAG446</b> | <b>Animal Nutrition</b> | <b>2 cr.</b> |
|---------------|-------------------------|--------------|

**Co-requisites** GAG474

**Pre-requisites** GAG325

This course focuses on the different digestive systems and nutritional requirements for bovine, cattle, and poultry. It also deals with optimal formulations of feed supplies for lactation, growth, work, and maintenance and egg production, regarding breeds and farming systems. The course

also examines the classification and function of nutrients and deficiency symptoms. Complementary laboratory sessions included in addition to lectures provide hands-on practical experience and dissection of different digestive systems. This laboratory also deals with the main techniques utilized in physical and chemical characterizations of nutrient compounds (protein, fat, energy) as well as feed rations calculations.

**GAG447 Special Topics in Agriculture and Food Sciences 0 cr.**

This course is designed to provide students with key concepts, current issues, research and new trends that are pertinent to professionals working in agricultural sectors, food industries, academia, government and NGOs. This seminar course is given by invited national and international speakers.

**GAG448 Agriculture and Sustainable Development 2 cr.**

This course examines the economical, ecological, and social dimensions of sustainable agriculture. It covers the influence of specific agricultural technologies, organic farming and land use practices on the productivity of agricultural ecosystems, environmental quality, and human health. The course also develops problem-solving skills for seeking eco-friendly alternatives in environmental and production issues.

**GAG450 Integrated Water Resource Management 3 cr.**

This course discusses principles of integrated water management. It provides comprehensive coverage of watershed hydrology, planning and management through integrated approach. Topics covered include aspects of groundwater and surface water systems, different types of water pollution, wastewater treatment and reuse, saline water management, water demand management and climate change issues. Presented material is reinforced by national case studies.

**GAG453 Insect Pests and Diseases of Crops in Lebanon 3 cr.**

This course discusses the most important insect pests and diseases of crops in Lebanon. It focuses on the causal agents such as fungi, bacteria, viruses, mollicutes, nematodes and insects. The course also covers the economic importance, damage, identification, classification of causal agents, host-plants, symptoms, biology, epidemiology and control measures.

**GAG465 Agroforestry 3 cr.**

The course deals with the concepts and classifications of agroforestry ecosystems, as well as their origin, evolution, structure and functioning. Topics covered include the diversity in forestry development strategies, socio-economic causes of deforestation, traditional and adaptive forest and tree management systems, non-timber forest products, and the role of forestry organizations in rural development.

**GAG472 Agricultural Entomology Laboratory 1 cr.**

**Co-requisites** GAG411

These laboratory sessions, which accompany GAG 411, include an examination of the different orders, families of insects as well as preparation of an insect collection. It provides students with insect dissection skills and examination of the digestive, reproductive, nervous and circulatory systems.

**GAG474 Animal Nutrition Laboratory 1 cr.**

**Co-requisites** GAG446

These laboratory sessions, which accompany GAG 446, provide hands-on practical experience and dissection of different digestive systems. This laboratory also deals with the main techniques utilized in physical and chemical characterizations of nutrient compounds (protein, fat, energy) as well as feed rations calculations.

**GAG505 Pesticides 2 cr.**

**Pre-requisites** GAG411 and GAG413

This course presents the role and use of synthetic and natural pesticides and their effects on biological activities in the environment. It explores the main chemical groups of pesticides and their chemical, physical and biological properties as well as their role and use in contemporary society, agriculture, urban pest control and public health. This course also covers the use of pesticides as a part of an integrated pest management program and their possible fate in the environment.

**GAG542 Hygiene and Veterinary Health 2 cr.**

**Pre-requisites** GAA227

This course describes the best ways to control zoonoses that impact human and animal health. It covers the nature and sources of infection, and deals with methods of hygiene and medical prophylaxis. The course also describes common methods used to diagnose, treat and control these diseases. Complementary laboratory sessions provide practical experience in identification of animal clinical and sub-clinical lesions due to major pathologies. They provide hands-on experience in differential diagnoses, disease investigation and management via autopsy and necropsy of diseased animals.

**GAG545 Landscape and Plant Engineering 3 cr.**

**Pre-requisites** GAG342

This course develops broad horticultural and floricultural foundations for landscape design. It focuses on seasonal and perennial plants, shrubs and trees as well as aspects of plant management. This course covers the production and maintenance of ornamental plants, creation of fences, windbreaks and other structures from a landscaping perspective. It also includes turf grass science and management, climatic adaptation and soil physics.

**GAG546 Poultry Sciences 3 cr.**

**Pre-requisites** GAG325

This course integrates the principles of aviculture and poultry production. It focuses on poultry physiology, anatomy and genetics, as well as the hatchery and the establishment and management of farms. Topics covered include broilers, breeders and layers production from economical, management, nutritional, health and biosecurity standpoints.

**GAG554 Livestock Farming Systems 3 cr.**

**Pre-requisites** GAG325 and GAG442

This course teaches the principles of animal husbandry techniques. It includes behavior, restraint, basic feeding principles, animal handling, and principles of humane care, housing and management. Topics covered also include species and breed identification applied to bovine, ovine, caprine, swine, and horses.

**GAG560A-B Advanced Specialized Internship 1 cr.**

This advanced internship is an individualized program whereby students acquire hands-on training experience and know-how in specific agricultural and food sectors. It provides students with knowledge of career opportunities and helps them to gain advanced experience and understanding of agriculture's role in today's society. This internship also provides opportunities to apply skills, concepts and theories in a practical context.

**GAG644 Weed Science and Medicinal Plants 3 cr.**

**Pre-requisites** GAG310 And GAG342

This course discusses the biology and ecology of weed and medicinal plants. It introduces the principles of weed science including its identification, management techniques and methodologies. Special attention is given to plants used for the treatment of human diseases with a review of toxic plants. The course also deals with Lebanese floral species identification and preparation of Herbarium specimens.

**GAG645 Accounting and Management of Agricultural Businesses 3 cr.**

This course describes the business and economics of the agriculture and food industries including the agricultural producer, consumer and food systems. It examines the management principles encountered in the day-to-day operation of an agricultural enterprise and their influence on the decision-making process. Topics also covered include preparation of feasibility studies, balance sheets, tracking systems, consumption and marketing of agricultural products, policies designed to achieve efficiency and welfare goals in agriculture.

**GAG646 Statistical Analysis Methods 3 cr.**

**Pre-requisites** MAT216

This course enhances students' knowledge in the field of applied statistics and methodological aspects. It presents the main techniques of statistical tests used (descriptive statistics and differential explanatory methods and data analysis). Topics covered include approaches for data manipulation, quantitative analysis (descriptive statistics, hypothesis testing, linear models, time series, and spatial data analysis), analysis of Variance (ANOVA test), comparisons of samples, simple and multiple regression, the statistical methods (CRD, RBD, Latin squares), multivariate statistics (PCA, CA and discriminant analysis), and different statistical software (SPSS, Statistica, R).

**GAG647 Biodiversity and Natural Resources Management 2 cr.**

**Pre-requisites** GAG305 or GAG303

This course covers the biological diversity of living organisms, the reasons behind the loss of biodiversity, the ecological importance of human disturbance and the methods applied in the field of conservation biology. It presents different levels of variability (inter- and intra-specific diversity) in terrestrial and aquatic ecosystems. This course also emphasizes the need for sustainable management of natural resources in terms of ecosystem goods and services. Lebanese biodiversity is examined in detail along with possible applicable management practices.

**GAG651 Genetic Engineering and Biotechnology 3 cr.**

**Co-requisites** GAG652

**Pre-requisites** GAG342

This course covers the principles and applications of genetic engineering and biotechnology in agricultural related fields. It describes the latest technologies applied to plant biotechnology, plant and mutation breeding, genetic resources, gene cloning and transfer.

**GAG652 Genetic Engineering and Biotechnology Laboratory 1 cr.**

**Co-requisites** GAG651

These laboratory sessions, which accompany GAG 651, provide hands-on practical experience in the tissue culture of plants. They also deal with the main techniques for the preparation of plant growth media and all necessary solutions and dilutions under sterile conditions.

**GAG690A Final Year Project 6 cr.**

**Pre-requisites** GAGC560B or GAGC690B or AGR 460B and GAAC615

The final year project is an original endeavor in agricultural engineering research. It serves to synthesize, integrate and apply knowledge from earlier relevant courses in the program and to tackle significant genuine topics in agricultural engineering. The final year project demonstrates knowledge of the field and makes an innovative contribution to new theories and practices. It is designed and completed under the direction of a thesis supervisor according to Faculty guidelines and presented to an examining panel for defense.

**GAGC560A Advanced Specialized Internship 1 cr.**

**Pre-requisites** GAG360B

This advanced internship is an individualized program whereby students acquire hands-on training experience and know-how in specific agricultural and food sectors. It provides students with knowledge of career opportunities and helps them to gain advanced experience and understanding of agriculture's role in today's society. This internship also provides opportunities to apply skills, concepts and theories in a practical context.

**GAGC645 Accounting and Management of Agricultural Businesses 3 cr.**

**Pre-requisites** CSC205 or CSC204

This course describes the business and economics of the agriculture and food industries including the agricultural producer, consumer and food systems. It examines the management principles encountered in the day-to-day operation of an agricultural enterprise and their influence on the decision-making process. Topics also covered include preparation of feasibility studies, balance sheets, tracking systems, consumption and marketing of agricultural products, policies designed to achieve efficiency and welfare goals in agriculture.

**GBM330 Biology for Biomedical Engineers 3 cr.**

**Co-requisites** GBM377

This course aims to introduce biomedical engineering students to fundamental sub-disciplines of biology such as molecular biology, cell biology, biochemistry, and genetics. The main concepts tackled during this course include cell structure and function, cell membrane composition, transport and trafficking, cell signaling, DNA structure, cell cycle, mitosis, meiosis, genetics and nucleic acids inheritance. In addition, the course will discuss the basis of the development of certain important diseases such as cancer, diabetes and mechanisms of therapeutic intervention.

**GBM340 Physiology for Biomedical Engineers 3 cr.**

**Pre-requisites** GBM330 And GBM377

This course sets the basic concepts for future interfacing between engineering and physiology. It is designed to provide Biomedical Engineering graduate students with the fundamental physiological principles, processes and regulatory mechanisms of the major organ functions in the body. Throughout the course the students will learn about the contribution of both the body's organs and systems to maintaining the internal environment relatively constant, i.e., homeostasis, which is necessary for all cells and organs to function normally. Particular emphasis is given to the nervous, musculoskeletal, cardiovascular, respiratory, digestive, excretory, and endocrine systems.

**GBM377 Biology for Biomedical Engineers Laboratory 1 cr.**

**Co-requisites** GBM330

This course provides students with the correct use of the optical microscope, in order to understand the way the cells of the human body work separately and together, and to familiarize the students with the basic concepts of cellular structure. It is also a way to practice observation with details of many kinds of tissues of the human body.

**GBM401 Introduction to Biomedical Engineering 2 cr.**

**Pre-requisites** GBM340

Working specifically within the framework of biomedical engineering applications, this course provides the engineering fundamentals of the biomedical engineering. The student will have a general approach of the different disciplines in biomedical engineering such as solid and fluid biomechanics, rehabilitation engineering, biomedical imaging, neuronal engineering, tissular engineering, health planning, design in medical devices. Important resources including the BMES student society and career-building will be presented.

**GBM416 Medical Imaging Systems 3 cr.**

**Pre-requisites** GBM440

This course describes the main and advanced techniques in medical imaging. It will cover various techniques for acquiring medical images: Ultrasound imaging, Magnetic Resonance Imaging, conventional radiology and CT scanner.

**GBM417 Health Information Systems 3 cr.**  
**Pre-requisites** GBM416 and GIN231

This course provides students with the basics of health information systems. They will assess the basics of standards and protocols used in health information systems. They will learn the methods of archiving and data communications of digital medical images of the PACS. They will become familiar with the new challenges of telemedicine and e-health systems. Based on these they will develop projects concerning medical data archiving and management used in hospital, clinics, and medical technical maintenance industries.

**GBM440 Biophysics and Bioelectricity 3 cr.**  
**Pre-requisites** GBM340

This course covers a number of topics in physics, including principles of light and radiation, acoustic waves, electricity and magnetism, in order for students to understand the physiological performances of a living cell and its interactions with the environment. The aim is to introduce students to these essential physiological processes that occur every day in our life by focusing on new developments and technologies related to this field.

**GBM451 Medical Instrumentation Design and Development 3 cr.**  
**Pre-requisites** GEL441 And GBM440  
**Co-requisites** GBM471

This course provides students with knowledge of the medical devices design including ECG, EEG, EMG, defibrillator and cardiac pacemaker. It covers the system architectural design and technical implementation for different devices used in the vital sign monitoring, in the intensive monitoring, and in the imaging techniques, emphasizing on the medical ultrasound instrumentation. Medical Gases and Supporting instrumentation, such as the incubator, respirator, and others, will also be covered.

**GBM462 Biomedical Signal Analysis 3 cr.**  
**Pre-requisites** GRT410 And GBM451  
**Co-requisites** GBM472

This course covers a number of topics in acquisition and processing of biomedical signals. It introduces the basics of digital signal processing then develops the different methodologies used in cardiological signal processing, neuronal signal processing, ultrasound signal processing, molecular and bio signal processing from the theory to the clinical diagnosis.

**GBM471 Medical Instrumentation Design and Development Lab 1 cr.**  
**Co-requisites** GBM451

**GBM472 Biomedical Signal Analysis Lab 1 cr.**  
**Pre-requisites** GRT410 And GBM471  
**Co-requisites** GBM462

This lab covers a number of topics in the acquisition and processing of biomedical signals. The students will learn the required knowledge to acquire and process different biomedical data. It covers the different methodologies used in cardiological signal processing, neuronal signal processing, ultrasound signal processing, molecular and bio signal processing from the theory to the clinical diagnosis.

**GBM480 Internship I 1 cr.**  
**Pre-requisites** GBM440

In order to register for this course, the students first spend a minimum of two months experience in the industry, in a hospital or in a company, and live a real working experience in the field of practice that they have chosen. Afterwards, the students have to present their "job" and what they learned from it in a well-structured and well-written scientific report.

**GBM501 Health and Hospitals Services 1 cr.**  
**Pre-requisites** GBM401

This course introduces the students to health systems in the world and gives them insight of different economic, social and ethical aspects. The course covers principles of management and hospital management in particular.

**GBM502 Biochemistry for Biomedical Engineers 2 cr.**  
**Pre-requisites** CHM212  
**Co-requisites** GBM503

This course is devoted to the study of the relationship between structure, interaction and function of fundamental cell macromolecules (proteins, sugars, lipids, nucleic acids). It will also present the usual biochemical techniques useful to the engineer from the purification of these macromolecules to detection and quantification (application, optimization, and limitations). Mechanisms and enzymatic kinetics (industrial applications of enzymes) as well as the major metabolic pathways (catabolism, anabolism and energy storage) will be discussed. It also explores protein engineering (proteins, chimeras, and induced kinetic/thermodynamic changes) and DNA engineering (cloning, PCR, RT - PCR).

**GBM503 Biochemistry for Biomedical Engineers Laboratory 1 cr.**  
**Pre-requisites** CHM270 and GBM502

This laboratory provides students with the basic biochemistry methods used to extract, detect or quantify the macromolecules of the cell. Students will use spectrophotometry, liquid chromatography, gas chromatography, and thin layer chromatography. DNA extraction, its amplification by PCR and qualification by horizontal electrophoresis will also be conducted as well as genetic transformation.

**GBM505 Statistics and Clinical Cases 3 cr.**  
**Pre-requisites** STA307 and GBM401

The course provides students with the statistics skills that are applied to clinical and medical data. Topics include descriptive statistics, theoretical and statistical distributions, statistical estimation methods and hypothesis testing, parametric and non-parametric tests, analysis of variance (ANOVA) and covariance (ANCOVA). Statistical data, models and analysis will be applied to real data sets. The SPSS computer program will be used to perform analysis. Clinical case studies and real case studies will be implemented during this course

**GBM507 Biocompatibility and Biomaterials of Medical Devices 3 cr.**  
**Pre-requisites** GBM401 And GBM440

This course gives the students an overview of biomaterial sciences. It covers different biomaterials used in the medical domain. It describes the structures and the proper properties of biomaterials and their biocompatibility properties emphasizing the different clinical usage in the human organism.

This course includes 23 lectures augmented with slides and is completed with four workshop sessions where the students are required to deliver a written report. At total of three evaluation sessions are scheduled, plus a test at the eighth week, and one final exam.

|                       |                                                         |              |

This course covers the basics of artificial organs, their functionality and how they could help in the This course covers the basics of artificial organs, their functionality and how they could help in rehabilitation. Rehabilitation engineering and use of artificial organs concerns the application of engineering analysis and design expertise to overcome organ failure and disabilities and improve quality of life. Students will learn about heart assist devices, liver artificial support, hybrid organs, bio-membranes – artificial kidneys, and selected aspects of tissue engineering (regenerative medicine – is it a future of artificial organs?). A range of disabilities and assistive technologies will be investigated. The relationship between engineering innovation, the engineering design process, the human-technology interface, and the physical medicine and rehabilitation medical community will be explored.

The course will give students a good understanding and design principles for several effective techniques used for medical image processing. The course covers the main sources of medical imaging data (CT, MRI, PET, and ultrasound). Students will learn the fundamentals behind image processing and analysis methods and algorithms with an emphasis on biomedical applications. They will learn medical image reconstruction and multi modalities medical image registration.

This course provides students with an introduction to genomics, the information flow in biology, exploring DNA sequence data, the experimental approach to genome sequence data, and genome information resources. It then goes on to describe: functional proteomics (protein sequence and structural data, protein information resources and secondary databases); computation genomics (internet basics, biological data analysis and application, sequence and databases, NCBI model, file format, Perl programming, bioperl, introduction and an overview of the human genome project); sequence alignment and database search (protein primary sequence analysis, DNA sequence analysis, pair wise sequence alignment, FASTA algorithm, BLAST, multiple sequence alignment, DATA base searching using BLAST and FASTA); and structural databases (small molecules databases, protein information resources, protein databank, genbank, swissport, and enterz).

| <b>Co-requisites</b>  | GBM531                                   |              |

This course provides the students with the basics of physiological models and basic biofeedback in medicine. The students will discover the design of artificial organs such as mechanical ventilator, artificial pancreas, anesthesia machine and others. After introducing the clinical needs of each artificial organ, the students will learn its architecture design, its different bloc diagrams, its systems components and characteristics, the different

algorithms and control loops used in these medical devices. They will discover the different algorithms such as AR model, fuzzy logic, artificial neuronal network(ANN), clustering methods and others used in real machines available in the market.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                            |              |

| Medical devices, essential for patient care, are currently one of the fastest growing industries in the world. However, the dramatic increase in faulty medical devices that were able to enter the market over recent decades has caused Medical Devices Policy to become increasingly important. Governments and international organizations started putting in place regulations for the safe and appropriate design, use and disposal of these products. The aim of this course is to provide an overview of international medical device regulations. Country-specific regulatory requirements for the USA, EU, and Canada etc. are mentioned and students will learn the general requirements for Risk Management (ISO 14971), Quality Management (ISO 13485) and the FDA and CE marking of products. |                                                            |              |

| The objective of this course is to provide students with a fundamental overview in classical and modern optics, as well as principles and functions of different Biomedical Optical Devices, and to emphasize the state-of-the-art topics related to the application of lasers and endoscopy in medicine.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                            |              |

| This course is designed to educate students about medical devices design and concentrates on the diagnostic modalities fundamentals in addition to hardware design. It is divided into two parts: the aim of the first part is to provide an overview of the design life cycle of medical equipment and to present the essential procedures and methodologies required by medical engineers and designers to develop and release new efficient products to the market; and the aim of the second part is to describe the typical system requirements for the design of medical devices and to be able to understand each system's functionality.                                                                                                                                                            |                                                            |              |

| This course describes the modeling and the control of biological, biomedical and drug delivery systems used in biomedical and pharmaceutical engineering. The control of biological and drug-delivery systems is critical to providing a long and healthy life to millions of people worldwide. In living systems, maintenance of homeostasis is credited to several mechanisms (positive and negative feedback loops). This course covers the basics of mathematical modeling and controls of biological, chemical and pharmaceutical systems, in order that the students will be able at the end to design control-release devices, to control drug delivery rate, to design feedback controllers such as infusion control in vasoactive drugs, in gaze control systems, in insulin infusion and others.  |                                                            |              |

| This laboratory describes the modeling and the control of biological, biomedical and drug delivery systems used in biomedical, chemical and pharmaceutical engineering. This course covers a set of models, pharmacy-kinetics, and a set of simulations and dynamic behaviors of typical plants, and feedback controller designs. This laboratory is delivered in Matlab, Mathematica, LabVIEW and other software.                                                                                                                                                                                                                                                                                                                                                                                          |                                                            |              |

| The course will give students a good understanding of the design principles for several effective techniques used for medical image processing. The course covers the main sources of medical imaging data (CT, MRI, PET, and ultrasound). Students will learn the fundamentals behind image processing and analysis methods and algorithms with an emphasis on biomedical applications. They will learn medical image reconstruction and multi modalities medical image registration.                                                                                                                                                                                                                                                                                                                      |                                                            |              |

Students will learn the fundamentals behind image processing and analysis methods and algorithms with an emphasis on biomedical applications. They will learn medical image reconstruction and multi modalities medical image registration.                                                                                                                                                                                                                                                                                                                                                                                                             |                                                            |              |
| <b>GBM550</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Hospital and Medical Equipment Planning</b>             | <b>3 cr.</b> |
| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | GEL340 and GBM451                                          |              |
| The course covers the basics of hospital and medical equipment planning. The different topics include: reading and designing maps, electro-mechanical legends, mapping and planning of the different hospital departments (Emergency, Operating Department, Intensive Care Unit, Medical Laboratory, Radiology, Anesthetic). Applied projects will be discussed and designed in an interactive classroom environment.                                                                                                                                                                                                                                                                                                                                                                                       |                                                            |              |
| <b>GBM581</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Internship II</b>                                       | <b>1 cr.</b> |
| <b>Pre-requisites</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | GBM596                                                     |              |
| In order to register for this course, the students first spend a minimum of two months experience in the industry, a company, or a hospital and live a real experience in the field of practice that they have chosen. Afterwards, the students must present their "job" and what they learned from it in a well-structured and well-written scientific report.                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                            |              |
| <b>GBM596</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Final Project I</b>                                     | <b>1 cr.</b> |

This course pushes the students to demonstrate preparedness to start their careers as professional engineers by undertaking an investigation of a research topic relevant to the profession and by appraising its practical experience. The research topic will give the students the opportunity to marshal the relevant knowledge and skills from various courses and laboratories of the program and apply them to the investigation of an approved research topic and then to produce a report of a professional standard.

**GBM597 Final Project II 3 cr.**

**Pre-requisites** GBM596

This course pushes the students to demonstrate preparedness to start their careers as professional engineers by undertaking an investigation of a research topic relevant to the profession and by appraising its practical experience. The research topic and applied developed product or study will give the student the opportunity to marshal the relevant knowledge and skills from various courses and laboratories of the program and apply them to the investigation of an approved research topic and then to produce a report of a professional standard. This course requires the students to exhibit/develop a proactive approach to manage, orient and present a project.

**GBM600 Special Topic in Biomedical Engineering 3 cr.**

**GBM605 Statistics and Clinical Cases 3 cr.**

The course provides students with the statistics skills that are applied to clinical and medical data. Topics include descriptive statistics, theoretical and statistical distributions, statistical estimation methods and hypothesis testing, parametric and non-parametric tests, analysis of variance (ANOVA) and covariance (ANCOVA). Statistical data, models and analysis will be applied on real data sets. The SPSS computer program will be used to perform analysis. Clinical case studies and real case studies will be implemented during this course

**GBM612 Modeling of Physiological Systems 1 cr.**

**Co-requisites** GBM613

This course provides the students with the basics of physiological models and basic biofeedback in medicine. The students will discover the design of artificial organs such as mechanical ventilator, artificial pancreas, anesthesia machine and others. After introducing the clinical needs of each artificial organ, the students will learn its architecture design, its different bloc diagrams, its systems components and characteristics, the different algorithms and control loops used in these medical devices. They will discover the different algorithms such as AR model, fuzzy logic, artificial neuronal network(ANN), clustering methods and others used in real machines available in the market.

**GBM613 Modeling of Physiological Systems Lab 3 cr.**

**Co-requisites** GBM612

The students will be able to design, simulate, implement and control physiological models and medical devices in the laboratory sessions and deliver projects (cardiac, respiratory, functional electrical stimulation, robotic hand and others).

**GBM620 Bioinformatics 3 cr.**

**Co-requisites** GBM621

This course provides students with an introduction to genomics, the information flow in biology, exploring DNA sequence data, the experimental approach to genome sequence data, and genome information resources. It then goes on to describe: functional proteomics (protein sequence and structural data, protein information resources and secondary databases); computation genomics (internet basics, biological data analysis and application, sequence and databases, NCBI model, file format, Perl programming, bioperl, introduction and an overview of the human genome project); sequence alignment and database search (protein primary sequence analysis, DNA sequence analysis, pair wise sequence alignment, FASTA algorithm, BLAST, multiple sequence alignment, DATA base searching using BLAST and FASTA); and structural databases (small molecules databases, protein information resources, protein databank, genbank, swissport, and enterz).

**GBM621 Bioinformatics Lab 1 cr.**

**Co-requisites** GBM620

The purpose of this lab is to introduce students to use of computers to solve biological problems. The following will be included: use of the LINUX operating system; use of the PERL programming language for bioinformatics analysis; and use of bioinformatics programs on a desktop computer (local, BLAST, REPEATMASKER, CLUSTALW).

**GBM632 Regulation of Medical Devices 1 cr.**

**Pre-requisites** GBM401

Medical devices, essential for patient care, are currently one of the fastest growing industries in the world. However, the dramatic increase in faulty medical devices that were able to enter the market over the last decades has caused Medical Devices Policy to become increasingly important. Governments and international organizations started putting in place regulations for the safe and appropriate design, use and disposal of these products. The aim of this course is to provide an overview of international medical device regulations. Country-specific regulatory requirements for the USA, EU, and Canada etc. are mentioned and students will learn the general requirements for Risk Management (ISO 14971), Quality Management (ISO 13485) and the CE and FDA marking of products.

**GBM633 Biomedical Signal Analysis 3 cr.**

**Co-requisites** GBM634

This course covers a number of topics in acquisition and processing of biomedical signals. It explains the basics of digital signal processing then develops the different methodologies used in cardiological signal processing, in neuronal signal processing, in ultrasound signal processing, and in molecular and bio signal processing, from the theory to the clinical diagnosis.

**GBM634 Biomedical Signal Analysis Lab 1 cr.**

**Co-requisites** GBM633

This lab covers a number of topics in acquisition and processing of biomedical signals. The students study the required knowledge to acquire and process different biomedical data. It covers the different methodologies used in cardiological signal processing, in neuronal signal processing, in ultrasound signal processing, and in molecular and bio signal processing, from the theory to the clinical diagnosis.

**GBM636 Nuclear Medicine and Radiotherapy 2 cr.**

This course covers the basics of Nuclear Medicine Imaging, Gamma Camera principles including modern digital designs, SPECT, coincidence imaging principles, PET instrumentation, radionuclide and X-ray CT transmission scanning techniques.

**GBM637 Design of Medical Equipment 3 cr.**

This course is designed to educate students about medical devices design and concentrates on the diagnostic modalities fundamentals in addition to hardware design. It is divided into two parts: the aim of the first part is to provide an overview of the design life cycle of medical equipment and

to present the essential procedures and methodologies required by medical engineers and designers to develop and release new efficient products to the market; and the aim of the second part is to describe the typical system requirements for the design of medical devices and to be able to understand each system's functionality.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                            |              |
